

# Engadine High School

## Works notification

**9 October 2021**

Dear residents,

As previously notified, asbestos containing material was found during early works in the soil in the area of the new Modular Demountable Room (MDR) buildings at Engadine High School. Works were undertaken during September and early October to remove the asbestos containing material.

During these remediation works, additional areas containing bonded asbestos material were identified. The material has been confirmed as bonded asbestos, which means it is attached to other material such as cement or vinyl and cannot be crumbled by light pressure.

The affected areas are already isolated by Lloyd Group's temporary work zone fencing and will be remediated outside of school hours on Saturday 9 October 2021 by licensed and accredited asbestos contractors, and monitored by occupational hygienists.

Early works are expected to continue until late October 2021. If further bonded asbestos containing materials are found in the soil during this period they will be remediated in strict accordance with all applicable legislation, regulations, policies and guidelines.

Testing will be completed to ensure the area has been fully remediated. The school will receive a clearance certificate before the area is open to students and staff.

A comprehensive COVID-19 Safety Plan is in place and Lloyd Group will comply with current health guidelines, including one person per 4sqm and mask and vaccination requirements.

The health, safety, and well-being of the school and the local community is our highest priority and we will continue to keep the community updated.

---
