Epping West Public School

Project update

September 2022

Investing in our schools

The NSW Government is investing \$8.6 billion in school infrastructure over the next four years, continuing its program to deliver 160 new and upgraded schools to support communities across NSW. This builds on the more than \$9.1 billion invested in projects delivered since 2017, a program of \$17.7 billion in public education infrastructure.

The NSW Department of Education is committed to delivering new and upgraded schools for communities across NSW. The delivery of these important projects is essential to the future learning needs of our students and supports growth in the local economy.

Project overview

A project is underway at Epping West Public School to provide upgraded facilities for the school community. The project includes construction of two new buildings which will include 29 new classrooms and new administration facilities. It also includes the refurbishment and renovation work to existing buildings at the school and removal of temporary classroom facilities.

Progress summary

The installation of Block S is finished, and students and staff are now using the learning spaces and facilities.

Sixteen temporary home bases were removed from the school site, and the project team is now preparing the grounds to install the second new building (Block T) during the Spring school holidays.

Next steps

Upcoming works include:

- structural manufacturing of the new building (Block T) offsite
- installation of a new modular school building during the Spring school holidays
- new footpath works along the eastern side of Ward Street.

Second modular installation during Spring school holidays

The second modular building (Building T) installation will happen at Epping West Public School during the Spring school holidays. The new building will be installed outside of school hours during the school holidays. The process will be very similar to the installation of Building S, where modular buildings were delivered to the school on large trucks. Using a mobile crane, the building modules will be lifted individually, and placed on the prepared foundations at the school site. The local community has been provided with detail on these works, including delivery and traffic arrangements that will be around the school.

How does modular installation happen?

Modular buildings will be delivered to the school on large trucks.

Using a mobile crane, the building modules will be lifted individually, and placed on the prepared foundations at the school site.

Day 1 Term 4 access

There will be no changes to the current pedestrian flows or school entry points when students and staff return in Term 4, 2022. Hoarding and fencing will remain in place around the construction site to ensure safety for staff, students and school community.
