Executive Summary

Cardno (NSW/ACT) Pty Ltd (Cardno) was engaged by DWP Australia Pty Ltd (The Client) to prepare a Remediation Action Plan (RAP) to guide and inform the remediation of soils at Kyeemagh Infants School, corner of Jacobson Avenue and Beehag Street, Kyeemagh NSW. The Site is proposed to be redeveloped from its current configuration as an infants school into a K-6 capable primary school.

The Site is located on a parcel of land that has been in use as a school since 1942. The Detailed Site Investigation (DSI) conducted by Cardno in 2018/9 identified areas of Contaminants of Potential Concern (COPCs) within soils requiring remediation or management. The identified areas of concern were an area of asbestos impacted soils above the adopted NEPM Health Screening Level (HSL) in the east of the site, an area of nickel impacted topsoil above the site specific Ecological Investigation Level (EIL) in the northern area of the site, and an area of hydrocarbon fractions C_{16}-C_{34} impacted soil above the adopted NEPM Ecological Screening Level (ESL) beneath hardstand in the south west.

The objectives of the RAP are to define the soil remediation and validation requirements for the previously identified asbestos, nickel and hydrocarbon impacts at the Site. Additionally, the remedial strategies are designed to minimise the potential risks to human health and the environment relative to the proposed land use of the property as a primary school.

Cardno evaluated potentially applicable remedial alternatives to address the potential risks to human health and the environment. Due to the finalised design and business case for each option being pending at the time of this report, two remedial strategies are provided which will eliminate receptor pathways to the identified COPCs at the site. The recommended strategies involve a combination of off-site disposal of impacted soil, and on-site containment beneath hardstand. These strategies provide the most efficient option for remediating the site, taking advantage of soil removal required for construction purposes and the capping potential of hardstand for the new development.

The remedial strategies are to be performed jointly by an environmental consultant, occupational hygienist and a licensed contractor and will involve the following general steps:

Remediation Strategy 1:

1. Stripping and excavation of asbestos and nickel impacted soils and disposal off-site at a licenced facility
2. Provision of an Asbestos Clearance Certificate for the removal of the asbestos impacted soils
3. Collection of soil validation samples from the walls and base of the resulting excavations
4. Importation of fill (if required) for landscaping, levelling and geotechnical requirements
5. Visual inspection and validation that hardstand has been restored across the hydrocarbon impacted area characterised by BH04.

Remediation Strategy 2

1. Stripping and excavation of nickel impacted soils and disposal off-site at a licenced facility
2. Stripping and excavation of asbestos impacted soils and natural soils (if required) and stockpiling on-site
3. Disposal of any geotechnically unsuitable material (i.e. topsoil with organic material) off-site to a licenced facility
4. Provision of an Asbestos Clearance Certificate for the excavation of the asbestos impacted soils
5. Collection of soil validation samples from the walls and base of the resulting excavations
6. Emplacement of asbestos containing soils beneath a marker layer, capping layer and hardstand paving surrounding the school building
7. Importation of fill (if required) for landscaping, levelling and geotechnical requirements
8. Visual inspection and validation that hardstand has been restored across the hydrocarbon impacted area characterised by BH04
9. Development of a Long Term Environmental Management Plan (LTEMP) to ensure the long term effectiveness of the remedial strategy

This RAP also includes a Construction Environmental and Waste Management Plan, a Work Health and Safety Plan and a Contingency Plan in addition to waste classification and soil validation requirements.

1 Introduction

Cardno (NSW/ACT) Pty Ltd ("Cardno") was engaged by DWP Australia Pty Ltd (DWP) to prepare a Remediation Action Plan (RAP) to guide and inform remediation of soils at Kyeemagh Infants School. The school is located on the corner of Jacobson Avenue and Beehag Street, Kyeemagh NSW 2216 ("the Site"). The Site is legally identified as Part Lot 1 within Deposited Plan (DP) 335734 and Lot 1 within DP 120095. The pre-school facility in the eastern portion of the Site is excluded from the scope of investigation. The location and features of the site are presented in **Figures 1** and **2** in **Appendix A.**

The Department of Education is proposing to redevelop the Site to increase its current capacity from a K-2 capable school to a K-6 capable school. The RAP has been prepared in accordance with the scope of works presented in Cardno's proposal dated 7 January 2019 in order to support submission of a Development Application for the site.

1.1 Background

The Site has an approximate area of 1.3 ha and is currently in use as an infant's school. The Department of Education is proposing to redevelop the Site to increase its current capacity from a K-2 capable school to a K-6 capable school. The development works will involve the demolition of all existing structures and construction of new facilities. The proposed development is declared as State Significant Infrastructure (Application Number SSD 9391) and in accordance with item 12.1 of the Secretary's Environmental Assessment Requirements (SEARS) for the project, a Detailed Site Investigation (DSI) was undertaken (Cardno, 2019a) in order to quantify any soil and groundwater contamination at the Site.

The findings of the DSI included identification of an area of bonded asbestos containing material (ACM) on and within soils in the eastern portion of the Site exceeding the adopted NEPM Tier I Health Screening Levels (HSLs) for continued use as a school. Additionally, an area of shallow topsoil was found to contain nickel concentrations above the adopted site specific Ecological Investigation Levels (EILs), an area of shallow fill was found to contain hydrocarbon fractions C_{16}-C_{34} above the adopted Ecological Screening Level (ESL) and Potential Acid Sulfate Soils (PASS) were identified at depth. Further details on the findings of the DSI are provided in **Section 2**.

Based on the findings of the DSI, Cardno concluded that the identified impacts could be managed and remedied in order to render the site suitable for continued use as a school. Cardno recommended that a RAP should be prepared to detail the remedial process and validation requirements for the site. This RAP has been prepared to address this recommendation.

1.2 Objectives

The objectives of the RAP are to:

- Define the remediation and validation requirements;
- Evaluate the effectiveness of potential remedial options;
- Recommend the most appropriate remedial strategy that will render the site suitable for the proposed land use;
- Establish the site validation criteria;
- Outline the remedial process to be undertaken to achieve the selected remediation strategy for the site; and
- Outline a Construction and Waste Management Plan (CWMP), Workplace Health and Safety (WHS) requirements, and an unexpected finds protocol and contingency plan;

Additionally, the RAP includes measures to minimise the potential risks to human health and the environment during implementation of the remedial works and under the proposed future land use.

1.3 Scope of Work

In order to meet the objects outlined in **Section 1.2** Cardno undertook the following scope of works:

- Defined the Site, site features and history, areas of environmental concern and developed a Conceptual Site Model (CSM)

- Identified remediation options suitable for identified COPCs;
- Evaluated the various remedial options and identified the preferred remediation strategy;
- Documented the process for implementation of the preferred remediation strategy;
- Development of a CEMP outlining environmental controls required for the duration of the works including an Unexpected Finds Protocol and contingency plan;
- Detail environmental and Work Health and Safety (WHS) control measures and community consultation requirements associated with implementation of the preferred remedial strategy; and
- Preparation of this RAP.

1.4 Guidelines and Legislation

The scope of work outlined above was completed in general accordance with following guidelines and legislation:

- ASSMAC (1998) *Acid Sulfate Soils Assessment Guidelines*, Acid Sulfate Soils Management Advisory Committee, August 1998;
- CCME (2010), *Canadian soil quality guidelines: carcinogenic and other polycyclic aromatic hydrocarbons (PAHs) (environmental and human health effects)*, Scientific criteria document (revised), Canadian Council of Ministers for the Environment ,2010
- Friebel, E & Nadebaum, P 2011, *Health screening levels for petroleum hydrocarbons in soil and groundwater. Part 1: Technical development document, CRC CARE Technical Report no. 10*, CRC for Contamination Assessment and Remediation of the Environment, Adelaide, Australia;
- HEPA (2018) *PFAS National Environmental Management Plan*, January 2018;
- NEPC (2013) *National Environment Protection (Assessment of Site Contamination) Measure (NEPM)*. National Environment Protection Council (NEPC) 1999, Amendment 2013;
- NEPC (2013) *Schedule B(2) Guideline on Site Characterisation*, NEPM 1999, Amendment 2013;
- NSW Department of Urban Affairs and Planning (1998) *Managing Land Contamination: Planning Guidelines: SEPP 55 Remediation of Land*, 1998;
- NSW EPA (1995) *Contaminated Sites Sampling Design Guidelines*. New South Wales Environment Protection Authority (EPA), September 1995;
- NSW EPA (2017) *Guidelines for the NSW Auditor Scheme (3rd edition)*, New South Wales Environment Protection Authority, September 2017
- NSW OEH (2011) *Guidelines for Consultants Reporting on Contaminated Sites*. New South Wales Office of Environment & Heritage (OEH), November 1997, Reprinted September 2000, Reprinted August 2011;
- Standards Australia (2005) *Australian Standard AS 4482.1-2005 – Guide to the investigation and sampling of sites with potentially contaminated soil. Part 1: Non-volatile and semi-volatile compound*s. Standards Australia, Homebush, NSW; and
- Standards Australia (1999) *Australian Standard AS 4482.2-1999 - Guide to the sampling and investigation of potentially contaminated soil. Part 2: Volatile substances*. Standards Australia, Homebush, NSW.

2 Site Identification and History

2.1 Site Definition

The site is approximately 8 km south west of the Sydney CBD. The site location and site plan are provided in **Appendix A** with site details presented below in **Table 2-1**.

Table 2-1 Site Definition and Details

Item	Details
Site Address	Corner of Jacobson Avenue and Beehag Street, Kyeemagh NSW 2216
Approximate Site Area (ha)	1.3 ha
Title Details	Lot 1 DP 335734 and Lot 1 DP 120095
Local Government Area	Bayside City Council
Parish and County	St George, Cumberland
Current Site Owners	The Department of Education
Current Site Zoning	R2 Low Density Residential

2.2 Previous Assessment Results

Cardno was provided with the following previous reports relating to the Site:

- Cardno (Cardno, 2019a) – *Detailed Site Investigation – Kyeemagh Infants School, Corner of Jacobson Avenue and Beehag Street, Kyeemagh NSW,* prepared for DWP Australia, January 2019
- Parsons Brinckerhoff (PB, 2014a) *Asbestos Remediation Clearance Certificate*. Prepared 9 July 2014.
- Parsons Brinckerhoff (PB, 2014b) *Asbestos in Grounds, Asbestos Management Plan, Kyeemagh Infants School, Kyeemagh, NSW*. Prepared July 2014.

The Cardno 2019 DSI contains summaries of the PB 2014a and 2014b reports. A summary of the Cardno 2019 DSI is provided in **Section 2.2.1** below.

2.2.1 Cardno 2019 – Detailed Site Investigation - Kyeemagh Infants School, Corner of Jacobson Avenue and Beehag Street, Kyeemagh NSW, prepared for DWP Australia, January 2019

Cardno prepared a Detailed Site Investigation for the Kyeemagh Infants School site, excluding the North Brighton pre-school located adjacent the eastern site boundary, over the period November to December 2018. The objective of the DSI was to investigate the potential for soil and groundwater contamination at the site which may pose a risk to human health or the environment under the proposed redevelopment as a primary school.

The scope of work undertaken included a desktop site history assessment and field investigation. Based on the site history assessment, the Site has been used as a school since first being developed in 1942. The site configuration changed slightly over the years with the addition and removal of some structures. The land use surrounding the site is identified as generally low density residential housing, with the Cooks River and Muddy Creek being the closest bodies of water. Groundwater use in the area is generally for domestic and irrigation purposes, and there is reportedly one active bore on Site used for irrigation.

In order to investigate potential contamination at the site, Cardno advanced a total of 19 test pits, one hand auger and five boreholes across the site. The test pits and hand auger were advanced into natural soils, occurring between 0.2 and 1.2 metres below ground level (mBGL). Boreholes were advanced to depths of up to 17 mBGL within the proposed school building footprint, and depths of 5 mBGL in other areas for investigation of ASS. Three boreholes were converted into permanent monitoring wells to establish groundwater conditions at the site. Boreholes logs and a geological cross section are provided in **Appendix D**.

Cardno submitted soil, groundwater and fibre cement samples for analysis of Contaminants of Potential Concern (COPCs) associated with the site history, and ASS potential. Based on the analytical results the DSI identified the following:

- ACM was detected within soils and at the soil surface above the adopted human health screening levels in the grassed open area in the east of the site;

- Nickel concentrations within shallow topsoil exceeded the adopted ecological investigation levels adjacent to the staff carpark;
- Concentrations of the Hydrocarbon fractions C_{16}-C_{34} exceeded the adopted ecological screening levels at one borehole beneath asphalt hardstand, however it was determined that as this area was to remain capped by an impervious hardstand, there was a low potential for a complete source-pathway-receptor linkage and remediation was not considered necessary;
- Soils at depths of 7 meters below ground level (mBGL) and greater were determined to be PASS; and
- Copper was detected in groundwater slightly above the adopted assessment criteria for marine waters within MW02, however this was qualified as likely being representative of regional groundwater quality.

Based on the analytical results, Cardno concluded that the likely sources of contamination were:

- As a consequence of uncontrolled fill material;
- As a consequence of demolition of buildings containing hazardous building materials; and
- As a consequence of historical spills and leaks.

Cardno concluded that management and remediation of the identified impacts was required in order to render the site suitable for continued use as a school. Cardno recommended that remediation management or risk assessment would need to be undertaken and that a RAP and Acid Sulfate Soils Management Plan (ASSMP) should be prepared to address the identified impacts.

2.3 Site History Summary

Based on the available information, the Site is part of two lots and DPs that have been in use as a public school since 1942, and generally undeveloped land prior. Changes in site layout and surrounding properties such as the addition of buildings and infrastructure have occurred sporadically over time.

Cardno identified several minor sources of surface and subsurface impact listed above, indicating a limited area of surface soils and fill material impacted with bonded ACM, and an area of surface soils impacted with nickel which will require remediation or management. Additionally, soils at depth beneath the water table are considered to be PASS. Cardno concluded that the site could be made suitable for the intended use as a primary school if the areas of impact were addressed.

3 Site Conditions and Surrounding Environment

3.1 Site Description

The Site is currently used as an infant's school and has an area of approximately 1.3 ha. The land parcel is approximately rectangular in shape and is bounded by Jacobson Avenue to the South, Beehag Street to the west, and Tancred Avenue to the east. The northern boundary abuts low density residential housing. The western area of the Site contains the infant's school with classrooms, administrative buildings, amenities and recreation spaces. The centre of the site is primarily an open grassed play area. In the eastern area of the Site North Brighton Preschool occupies an approximately 1,700 m^2 area, which is excluded from the scope of the RAP. Figures detailing the Site location and surrounds, and plans for the proposed development are included in **Appendix A**.

Cardno conducted a site inspection on 10 November 2018 during field works for the DSI, with photographs from the site inspection included in **Appendix B**. Details of the observations made during the inspection are provided in **Table 3-1** below.

Table 3-1 Site Inspection Observations

Item	Observations
Current site use	Current site use is as an infant's school
Proposed site use	Future site use is for redevelopment to remain as a primary school
Site slope and drainage features	Site elevation is approximately 5 mAHD and is relatively level. Local topography is generally level with minor undulations and mounds. Drainage in surrounding streets is expected to be through a pit and pipe network via street guttering.
Vicinity Surface water bodies	The Cooks River is located approximately 240 m east north east of the Site, Botany Bay is located approximately 240 m south east of the Site, and Muddy Creek is located approximately 330 m north west of the Site. Muddy Creek drains into the Cooks River, which flows to Botany Bay.
Site surface coverings	The Site is mostly grassed, with areas of asphalt hardstand in play areas in the south western area of the Site. A graveled carpark is present in the north western corner of the Site accessed via Beehag Street.
Surface soils	Surface soils were visible in areas of sparse grass cover and consisted of sands and silty sands.
Buildings	Eight buildings are present in the western area of the Site which comprise the infants school facilities. Buildings include; ▪ A demountable office and classroom building in the north adjacent the carpark ▪ A metal building housing the Sustainable Community Hub adjacent garden beds south of the office ▪ A brick library building south west of the office ▪ A brick amenities building south of the office ▪ A clad classroom south of the Beehag Street entrance ▪ Two clad classroom buildings and a clad storage building adjacent the Jacobson Avenue boundary The preschool facility contains additional buildings which are not included within the investigation area.
Potential asbestos in building materials	Potential asbestos containing materials were observed in some buildings generally consisting of wall cladding to the buildings in the south adjacent to Jacobson Avenue.
Manufacturing, industrial or chemical processes and infrastructure	None observed.
Fuel storage tanks (USTs/ASTs)	None observed.
Dangerous goods	None observed.
Solid waste deposition	None observed.

Liquid waste disposal features	None observed.
Evidence of previous site contamination investigations	None observed.
Evidence of land contamination (staining or odours)	Fibre cement material was observed at the soil surface adjacent the access gate in the north eastern corner of the site, and adjacent TP19 (**Figure 3, Appendix A**).
Evidence of groundwater contamination	None observed.
Groundwater use	A functioning groundwater bore is present on site reportedly used for irrigation.
Vegetation	Mature trees are present primarily in the western infant's school area, and eastern pre-school area. The remainder of the Site is generally grassed or hardstand. Although grass cover was sparse in some areas, vegetation was generally observed to be healthy. Vegetation is mapped as Urban Exotic / Native (Native Vegetation of the Sydney Metropolitan Area, OEH)
Site fencing	The site is enclosed by a metal security fence on the eastern, western and southern boundaries, and a timber fence on the northern boundary.

3.2 Surrounding Land Uses

Land uses surrounding the site are detailed in **Table 3-2** and a map of the surrounds in shown in **Figure 1**, **Appendix A**.

Table 3-2 Surrounding Land Uses

Direction	Land Use or Activity
North	Low density residential followed by Mutch Avenue, Kyeemagh RSL Club and Muddy Creek
South	Jacobson Avenue followed by low density residential, General Holmes Drive and Botany Bay
East	Tancred Avenue followed by low density residential and the Cooks River, followed by Sydney Airport
West	Beehag Street followed by low density residential

The area is serviced by public roads and access to the site is available from Beehag Street to the west, and via a locked access way at the north eastern corner of the Site leading to Tancred Avenue.

3.3 Proposed Development

The proposed redevelopment aims to address demographic pressures identified in the Kogarah Primary Cluster by expanding the capacity of the school from a K-2 Infants School to K-6 primary school. The proposed school will have a capacity of up to 500 students. The redevelopment involves the demolition of all existing buildings in a staged process to allow the existing school to remain open. The concept design for the proposed development is included in **Appendix A**. New infrastructure includes;

- A main two storey building in the eastern area of the Site adjacent to the pre-school boundary, comprising the majority of the current grassed open area;
- An administration building in the central southern area of the Site;
- Hardstand and a hall building in the south west corner of the Site;
- A games court and refurbished carpark in the north western area of the Site; and
- Landscaping of the remainder of the Site.

3.4 Topography and Drainage

Site elevation is approximately 3 to 5 mAHD and is relatively level with a raised mound south of the Sustainable Community Hub. The local topography is generally flat with minor undulations and mounding. Surface water is expected to generally infiltrate into the sandy soils. Drainage in surrounding streets is by kerbside guttering. Likely stormwater discharge points are the Cooks River and Botany Bay.

3.5 Flood Potential

Cardno undertook a review of available flood mapping of the area surrounding the school in order to provide flooding advice (Cardno, 2018). The Cooks River Flood Study undertaken by Parsons Brinckerhoff for Sydney Water in 2008 indicates that the Site is unlikely to be affected by the 1% AEP or PMP flood events.

3.6 Regional Geology and Hydrogeology

3.6.1 Geology and Soil Landscape

The Soil Landscapes Map of Sydney 1:100,000 sheet indicates that the Site soils are comprised of Quaternary quartz sands with minor shell content, silt and fine sands (Qhbr). The NSW Office of Environment and Heritage eSPADE online GIS tool indicates that the site is characterised as part of the Tuggerah Soil Landscape, which is an Aeolian landscape with deep sandy soils with pH values ranging from 4.5 (strongly acidic) to 7.0 (neutral).

The subsurface profile encountered generally during the DSI (Cardno 2019a) consisted of topsoil and fill material consisting of sands and silty sands to a maximum depth of 2.2 metres below ground level (mBGL), with filling generally observed to be less than 1 m deep. Natural soils encountered generally consisted of sands and silty sands, with intermittent sandy clays present at greater depths.

The site is underlain by the Botany Sands Aquifer which is extensive, porous and highly productive. Groundwater flow is expected to be to the east towards the Cooks River or south towards Botany Bay with local variations in gradient. Static Water Levels (SWLs) gauged during the DSI (Cardno 2019a) from three monitoring wells on-site ranged between 3.8 and 3.9 metres below top of casing (ground level). Due to the proximity of the Site to Muddy Creek, the Cooks River and Botany Bay, groundwater at the Site may be tidally influenced.

3.6.2 Acid Sulphate Soils

The Rockdale Local Environment Plan 2011 lists the Site as within a Class 4 Acid Sulfate Soils (ASS) potential area, with a Class 3 area present to the north. There is potential for ASS to be present beneath the Site, and works below 2 m below ground level (mBGL), or which may lower the water table by 2m may pose an environmental risk. As part of the DSI (Cardno 2019a), an investigation into ASS beneath the Site was undertaken. Some potential indicators of ASS were identified during fieldworks (odour, shell inclusions), and analytical results confirm that Potential Acid Sulfate Soils (PASS) is present at the Site within sands and clays at depths greater than 7 mBGL.

3.6.3 Salinity

There is no data on the Salinity Hazard Map generated using the NSW planning Portal, therefore the potential occurrence of saline soil conditions at the Site is considered to be low.

4 Conceptual Site Model

This section summarises the previous environmental assessment and site historical information to confirm the Conceptual Site Model (CSM). Generally, a CSM provides an assessment of the fate and transport of COPCs relative to site specific, subsurface conditions with regard to their potential risk to human health and the environment. The CSM takes into account site specific factors including:

- Source(s) of contamination;
- COPCs associated with past and present site activities;
- Vertical, lateral and temporal distribution of COPCs;
- Site specific lithological information including soil type(s), depth to groundwater, effective porosity, and groundwater flow velocity and
- Actual or potential receptors considering both current and future land use both for the site and adjacent properties, and any sensitive ecological receptors.

Based on the information sourced in the DSI, a CSM has been developed and is outlined in **Table 4-1**, below. Additional details are included in the sections that follow as necessary.

Table 4-1 Conceptual Site Model (CSM)

Conceptual Site Model Element	Description
Contamination Sources	The sources of subsurface contamination include: ▪ uncontrolled placement of fill material ▪ uncontrolled demolition of buildings containing hazardous building materials ▪ historical spills and leaks
Site Current and Future Use	Current site use is as an infant's school. Future site is as a primary school.
Site Geology	Topsoil and fill material consisting of SAND and Silty SAND, underlain by medium to fine grain marine SAND and CLAY.
Site Hydrogeology	The Botany Sand Aquifer is present beneath the site. The SWL of groundwater at the Site measured from installed bores is 3.8 to 3.9 mBGL.
COPCs - Soil	The following COPCs have been identified above adopted Tier I screening criteria at the Site: ▪ Concentrations of asbestos have been detected within soils exceeding the adopted NEPM HSL at TP04, and fragments have been identified beneath turf at TP03, and at the soil surface adjacent TP19 and BH02; ▪ Concentrations of nickel have been detected exceeding the adopted Site Specific EIL at in two hotspots at TP06 and TP13; ▪ Concentrations of hydrocarbons (TRH C_{16}-C_{34}) have been identified exceeding the adopted NEPM ESL at BH04; and ▪ Potential Acid Sulfate Soils have been identified at depths greater than 7m at the site.
Extent of Impacts - Soil	The vertical extent of TRH C_{16}-C_{34} impacted soils identified at sample location BH04 is considered to be limited to the depth of fill material (0.5 mBGL). The lateral extent has conservatively been estimated as the distance to the nearest clean location, with an indicative area of 1,500 m^2. Concentrations of nickel were detected in surface soils greater than 2.5 times the adopted EIL in shallow surface soils at sample location TP06 and TP13. The vertical extent of impact is considered to be limited to the depth of fill (0.3 to 0.4 mBGL). The lateral extent has conservatively been estimated as the distance to the nearest clean location, with an indicative area of 1,300 m^2, to be confirmed during remedial works. Concentrations of asbestos in soil exceeded the adopted HSL at sample location TP04 within shallow fill, with fragments noted at on the soil surface adjacent to sample locations TP03, TP19, and BH02. The vertical extent of impact is considered to be the depth of fill, which varies between 0.3 mBGL at BH01 and 1.2 mBGL at TP03. The lateral extent of impact has been conservatively

	estimated as the distance to the nearest clean location, with an indicative area of 2,200 m^2, to be confirmed during remedial works.
COPCs – Groundwater	Copper was detected slightly above the NEPM GILs for marine waters in MW02 (0.002 mg/L).
Extent of Impacts - Groundwater	Given concentrations of copper within Site soils were within acceptable criteria, and the urbanized nature of the site and surrounds, the concentrations are likely to be a function of regional groundwater quality rather than a result of site contamination. Given the distance to the nearest receiving body, and the low levels detected, the potential risks from groundwater at the Site are considered low and acceptable.
Potential Human Receptors	Current and future users of the site, including students, staff, construction and maintenance workers. Current complete receptor pathways include an inhalation pathway to asbestos impacted soils.
Potential Environmental Receptors	On-site vegetation communities, and off-site receptors including aquatic communities in the Cooks River and Botany Bay. Current complete receptor pathways include contact / uptake by on-site ecological communities (vegetation, soil biota) of nickel impacted soils.

4.2 Conceptual Site Model Summary and Risk Assessment

The following sections summarise the Conceptual Site Model and an evaluation of potential risks to human and environmental receptors. Consideration should be given to any data gaps or uncertainties described in **Section 4.3** below.

4.2.1 Asbestos in Soils

ACM in the form of fibre cement debris was identified at the soil surface in two locations adjacent TP19 and BH02, beneath turf at TP03, and within shallow fill material at TP04 exceeding the adopted Tier I HSLs. The potential area of impact is located in the eastern section of the Site, adjacent to the pre-school boundary fence. The fill material encountered within the area consists of sand and silty sand, with variable depths of between 0.3 and 1.2 mBGL.

During development and under the proposed site use the soils pose a potential low inhalation risk to construction personnel, site users, and off-site receptors and will require remediation, management or risk assessment to mitigate the risk and render the site suitable for the proposed land use. Prior to the redevelopment being complete, remediation would be undertaken to remove the completed receptor pathway. The inhalation risk is considered to be low due to airborne fibre monitoring undertaken as part of the DSI during soil disturbance being below the exposure standard.

4.2.2 Nickel in Shallow Soils

Concentrations of nickel were detected above the Tier I Site Specific EIL in shallow soils at two locations (TP06_0.1 and TP13_0.1) adjacent the staff carpark. The fill material encountered consisted of silty and gravelly sands and gravel to depths of between 0.3 and 0.4 mBGL.

Under the proposed site use the soils pose a potential risk to receptors such as on-site vegetation. According to the proposed development plans, the area characterised by TP06 and TP13 is proposed to be beneath the school building, expanded carpark, or landscaped. The landscaping of the area is indicated to involve removal of surface soils and import of topsoil. The proposed works are likely to remove the nickel containing soils, or mitigate their contact with on-site vegetation. As such, prior to the redevelopment being complete, the completed receptor pathway to on-site vegetation is to be removed.

4.2.3 TRH C_{16}-C_{34} in Soils

Concentrations of TRH fractions C_{16}-C_{34} were detected above the adopted ESL at location BH04 beneath asphalt hardstand. Under the current and future site use, the area surrounding BH04 is to remain beneath hardstand, physically separated from ecological receptors such as on-site vegetation. Therefore, the source-pathway-receptor linkage is considered incomplete under the proposed redevelopment and no further action is considered necessary provided that the area remains as hardstand.

4.2.4 Potential Acid Sulfate Soils (PASS)

PASS have been identified beneath water table at the site at depths of 7 mBGL and greater. Works for the proposed development are unlikely to reach the water table or disturb PASS with the exception of piling for

building foundations. The mitigation strategies, contingency controls and requirements for management of PASS at the site are contained within the Acid Sulfate Soils Management Plan (ASSMP) prepared by Cardno (Cardno, 2019b).

4.3 Data Gaps and Uncertainties

The recommendation made in this RAP were based on conclusions made by Cardno based on the results of discrete sampling undertaken as part of the DSI. However, subsurface conditions (soil, sediment and groundwater) can be complex and heterogeneous with many unknown geologic interactions that may affect the movement and/or concentrations of potential contaminants. Therefore should previously unidentified areas of soil impacts be discovered during future phases of work at the Site, additional investigation will be required.

Given the presence of fill on the site, there is likely to be some variability in the quality and type of the fill. Due to the discrete nature of ACM in soil, there is potential for ACM to be present in other areas. An Unexpected Finds Protocol should be employed to manage any previously unidentified areas of potential contamination.

Due to the Site being a working school, investigations were unable to be undertaken beneath buildings and therefore represent a data gap in site characterisation. While these data gaps are not considered to represent an impediment to the proposed development, if these soils are to be disturbed, in the future these soils require classification to enable appropriate management.

5 Remediation Objectives

5.1 Remediation Objectives

The purpose of the proposed remedial works is to manage and remediate the identified asbestos, hydrocarbon and nickel impacts at the Site in such a way that the potential risks posed to human health and the environment are minimised or eliminated.

The primary objectives for the remedial works are to:

- Manage identified hydrocarbon impacts in soils in such a manner that the potential risk to the environment is minimised;
- Remediate or manage asbestos and nickel impacted soils in such a manner that the potential risk to human health or the environment is minimised; and
- Remediate or manage asbestos and nickel impacted soils in such a manner that the Site is made suitable for the proposed land use as a primary school.

Based on results of the DSI, the potential risk to ecological receptors from copper levels within groundwater was considered low and acceptable due to the distance to the nearest potential receptor, and the likely regional nature of the COPC concentrations reported in groundwater. As such, no remedial works are considered necessary for groundwater at the Site.

The proposed remedial works will include collection of additional soil samples to validate that the excavated soil can be re-used on site, and that soil remaining at the site is suitable for the continued use as a primary school. The Remediation Goals (RGs) for the remediation works are summarised below.

5.2 Soil Validation Remediation Goals

The soil validation RGs for the proposed remediation are based on the National Environment Protection Council (NEPC) formulated the National Environment Protection (Assessment of Site Contamination) Measure (NEPM) in relation to investigation levels for soil and groundwater in the assessment of site contamination (NEPC 1999a).

As detailed in **Section 2** and shown in **Appendix A**, the site is proposed to be redeveloped for continued land use as a primary school. As per NEPM guidance, the criteria for low density residential land use with accessible soils are applicable to primary schools. Therefore, the applicable soil RGs are as follows:

- Asbestos
  - NEPM Health Screening Level (HSL) for asbestos contamination in soil for low density residential land use (HSL A)
- Nickel:
  - Site Specific Ecological Investigation Levels (EILs) for nickel concentrations for continued low density residential land use (HIL C). These values are generated from on-site physiochemical soil parameters via the Ecological Investigation Level Calculation Spreadsheet, developed by CSIRO for the National Environment Protection Council.
- Aesthetics:
  - Soils remaining onsite, particularly those near the soil surface, should not generate odour, be significantly stained, contain large quantities of inert waste or visible asbestos.

The quantitative validation criteria for each contaminant are provided in **Table 5-1** below.

Table 5-1 Soil Validation Criteria

Analyte	Guideline	Validation Criteria
Asbestos (ACM)	NEPM HSL A	0.01% Weight / Weight
Asbestos (Fibrous Asbestos and Asbestos Fines)	NEPM HSL A	0.001% Weight / Weight
Nickel	Site Specific EIL	8 mg/kg

5.3 Waste Classification Criteria

The soil analytical results collected during the DSI, remedial and validation works will be utilised to determine the waste classification of soil so it can be appropriately managed if transported off-site. The waste classification of the soil is based on the following guidelines:

- Natural soils at the site proposed for excavation have the potential for characterisation as Excavated Natural Material (ENM). To characterise natural soils as ENM, sample results will be compared to the chemical and other material property requirements included in Table 4 of the *Protection of the Environmental Operations (Waste) Regulation 2014 – the excavated natural material order 2014* (ENM order).
- If natural soil and fill material at the Site do not meet the ENM classification, comparison of analytical results will be made to criteria detailed in the *NSW DECCW (2014) Waste Classification Guidelines: Part 1: Classifying Waste* for waste classification purposes.

5.4 Triggers for Further Management

Further investigation or remediation may be required during the construction phase of the proposed works. Triggers for further management may include:

- Unexpected finds including impacted (visually stained and/or odorous) soils during earthworks;
- The presence of previously unidentified asbestos; and
- The identification of buried waste.

Where the triggers for further management are identified, refer to **Section 9.6** for the measures to be implemented.

6 Data Quality Objectives

6.1 Data Quality Objectives

The NSW EPA (2017) Guidelines for the NSW Site Auditor Scheme (3rd Edition), which is endorsed under s105 of the Contaminated Land Management Act 1997, requires that Data Quality Objectives (DQOs) be prepared for all assessment and remediation programs. The DQO process as adopted by the NSW EPA is described within US EPA (2000) Guidance for the Data Quality Objectives Process and Data Quality Objectives Process for Hazardous Waste Site Investigations.

The DQOs for the site investigation, as detailed within NSW EPA (2006), are summarised in **Table 6-1** below.

Table 6-1 Data Quality Objectives

DQO Step	Description
Step 1 State the Problem	Environmental media at the site have been impacted with COPCs at concentrations above the Tier I screening guidelines. Remediation or management of soils necessary to render the site suitable for the intended land use as a primary school.
Step 2 Identify the Decisions	The decisions that must be made are: 1. Identify suitable remedial strategies capable of mitigating the identified impacts? 2. Which remedial strategy(s) will most effectively remediate the site for the intended land use considering Site specific constraints? 3. How will the selected remedial strategy be implemented? 4. What are the validation criteria and how will the remedial works be validated?
Step 3 Identify Inputs to the Decision	The primary inputs to the decisions described above are: 1. Analytical results from previous investigations undertaken at the site; 2. Screening criteria made or approved by the NSW EPA for sensitive land uses (i.e. primary schools) 3. Analytical results of validation samples collected following excavation of impacted soils; 4. Observations made during site works concerning aesthetic issues, including odours, staining and waste inclusions. 5. An assessment of the suitability of the analytical data obtained, against the Data Quality Indicators (DQIs);
Step 4 Define the Study Boundaries	The study site is defined as Kyeemagh Infants School, being parts of Lot 1 DP 335734 and Lot 1 DP 120095. The lateral extent of the study is shown in **Figure 2**, and excludes the New Brighton Preschool. The vertical extent of sampling is limited to 2.2 mBGL for validation purposes and to the depth of proposed excavations for waste classification purposes. The temporal extent of the study will remain valid provided that the current and proposed land use remains the same, and that no further sources of contamination are detected or introduced to the site. The conclusions are limited to information gained during sampling conducted for the DSI in 2018. The remedial and validation process is anticipated to the conducted concurrent with the property redevelopment which could last several years.
Step 5 Develop a Decision Rule	The decision rules for the RAP include: 1. The number of soil validation points will meet the requirements for validation of the COPCs identified as per NEPM guidance; 2. Primary, duplicate and triplicate soil and groundwater samples will be analysed at National Association of Testing Authorities, Australia (NATA) accredited laboratories; 3. Field and laboratory QA/QC results will indicate reliability and representativeness of the data set, as defined in **Table 6-2** below;

DQO Step	Description
	4. Laboratory Limits of Reporting (LORs) will be below the applicable guideline criteria for the analysed COPC, where possible; 5. Applicable guideline criteria will be sourced from NEPM guidelines and other NSW EPA endorsed guidelines (as necessary); 6. Any soil aesthetic issues will be evaluated including areas of discolouration, odour and hazardous waste inclusions; 7. If the concentration of a soil COPC in a sample is below the applicable guideline criteria, then no further assessment/remediation will be required with respect to that COPC; 8. If the concentration of a COPC is less than applicable guideline criteria, then no further assessment/remediation will be required with respect to that COPC; and 9. If the concentration of a soil COPC in a sample exceeds the applicable guideline criteria, then additional works (e.g. remediation or quantitative risk assessment) may be required to minimise the risk.
Step 6 Specify Limits on Decision Errors	To ensure the results obtained are reproducible and accurate, a QA/QC plan is incorporated into the sampling and analytical program. DQIs are used to assess the reliability of field procedures and analytical results. In particular, the DQIs within NSW DEC (2006) are used to document and quantify compliance. DQIs are described as follows, and are presented in **Table 6-2** below: 1. Completeness – A measure of the amount of useable data from a data collection activity; 2. Comparability – The confidence (expressed qualitatively) that data may be considered to be equivalent for each sampling and analytical event; 3. Representativeness – The confidence (expressed qualitatively) that data are representative of each media present on the site; 4. Precision – A quantitative measure of the variability (or reproducibility) of data; and 5. Accuracy (bias) – A quantitative measure of the closeness of reported data to the true value.
Step 7 Optimise the Design for Obtaining Data	To achieve the DQOs and DQIs, the following sampling procedures will be implemented to optimise the design for obtaining data 1. The number of soil sampling points for waste classification and spoil re-use will be in accordance with NEPM guidance and/or the NSW EPA Excavated Natural Material Order (2014) 2. Soil samples will be collected from resulting excavations of impacted soils at the rate specified in the NEPM for validation of an area of the size produced 3. Soil COPCs will be selected based on the area of concern as identified by previous data obtained during the DSI 4. Samples were be collected by suitably qualified and experienced environmental consultants 5. Soil samples will be collected and preserved in accordance with relevant standards/guidelines 6. NATA accredited laboratories will be engaged for analysis of samples 7. Soil observations including odours, staining and visual identification of potential asbestos bearing material will assist with selection of samples for laboratory analysis and the extent of remediation 8. Field and laboratory QA/QC procedures will be adopted and reviewed to indicate the reliability of the results obtained.

6.2 Data Quality Indicators

The following Data Quality Indicators (DQIs), referenced in Step 6 in **Table 6-1** have been adopted in accordance with the NSW EPA (2017) Guidelines for the NSW Site Auditor Scheme (3rd Edition). The DQIs outlined in **Table 6-2** assist with decisions regarding the contamination status of the site, including the quality of the laboratory data obtained.

Table 6-2 Data Quality Indicators

DQI	Frequency	Data Acceptance Criteria
Completeness		
Field documentation correct	All samples	All samples
Soil bore logs complete and correct	All samples	All samples
Suitably qualified and experience sampler	All samples	All samples
Appropriate lab methods and limits of reporting (LORs)	All samples	All samples
Chain of custodies (COCs) completed appropriately	All samples	All samples
Sample holding times complied with	All samples	All samples
Proposed/critical locations sampled	-	Proposed/critical locations sampled
Comparability		
Consistent standard operating procedures for collection of each sample. Samples should be collected, preserved and handled in a consistent manner	All samples	All samples
Experienced sampler	All samples	All samples
Consistent analytical methods, laboratories and units	All samples	All samples
Representativeness		
Sampling appropriate for media and analytes (appropriate collection, handling and storage)	All samples	All Samples
Samples homogenous	All samples	All Samples
Detection of laboratory artefacts, e.g. contamination blanks	-	Laboratory artefacts detected and assessed
Samples extracted and analysed within holding times	All samples	-
Precision		
Blind duplicates (intra-laboratory duplicates)	1 per 20 samples	30% RPD, then review RPDs >30% would be reviewed in relation to heterogeneity of sample and LOR
Split duplicates (inter-laboratory duplicates)	1 per 20 samples	30% RPD, then review RPDs >30% would be reviewed in relation to heterogeneity of sample and LOR
Laboratory duplicates	1 per 20 samples	<20% RPD Result > 20 × LOR <50% RPD Result 10-20 × LOR No Limit when RPD Result <10 × LOR
Accuracy		
Trip blanks	1 per sampling event (as required)	COPCs<LOR
Trip Spikes	1 per sampling event (as required)	70-130%
Surrogate spikes	All organic samples	50-150%
Matrix spikes	1 per 20 samples	70-130%
Laboratory control samples	1 per 20 samples	70-130%

DQI	Frequency	Data Acceptance Criteria
Method blanks	1 per 20 samples	<LOR

7 Remediation Options

7.1 Remediation Objective

The objective of the remedial works is to appropriately remediate or manage soil material at the Site identified with COPCs at concentrations above the NEPM Tier I screening guidelines to enable the site to be characterised as suitable for use as a primary school.

An evaluation of the applicable soil remedial options and identification of the recommended remedial strategy are included below.

7.2 Remediation Options Hierarchy

Soil remedial strategies potentially applicable to the site were evaluated along the following remediation hierarchy which is based on the recommended NSW EPA screening process.

1. "Do Nothing" The 'do nothing' option involves not removing or addressing any of the identified impacts
2. On-site treatment of soil so that the contaminant is either destroyed or the associated hazard is reduced to an acceptable limit
3. Off-site treatment of excavated soil so that the contaminant is either destroyed or the associated hazard is reduced to an acceptable limit, after which the soil is returned to the site
4. Removal of contaminated soil to an approved site or facility, and if necessary replacement with imported fill, and
5. Isolation and management of the soil on-site by capping/containment within an appropriate barrier.

7.3 Remedial Options Evaluation

Cardno has identified and evaluated the potential remedial options listed in the hierarchy above to provide a recommended remedial strategy to address the impacted soils at the Site. The options are described in **Table 7-1** below and the evaluation process is summarised in **Table 7-2**.

Table 7-1 Remedial Option Identification

Remedial Option	Discussion
Option 1: Do Nothing	This option involves not undertaking any remedial or management measures and proceeding with development.
Option 2: On-site treatment of soil	This option includes on-site treatment of soil through physical methods such as sieving and separation, and land farming to stimulate biological degradation and volatilisation of COPCs. Periodic soil sampling is undertaking during the process to determine if the COPCs concentrations have been reduced to levels below the RGs. If present, removal of ACM manually from the surface soils also constitutes on-site treatment of soil. This options may also include an in-situ treatment method such as chemical oxidation to change the chemical and/or physical characteristics of the COPCs. Post treatment monitoring is usually required to determine the efficacy of the treatment method. The COPC nickel identified at the Site is not volatile or readily biodegradable and therefore, the identified concentrations cannot be reduced though on-site land farming in a reliable or timely manner. The COPC asbestos (in the form of ACM) can be removed from soils to reduce levels below the RGs through treatment methods such as sieving and separation, given that the site soils are generally sand. Although there is some inherent risk and uncertainty of the success of the method.
Option 3: Off-site treatment of excavated soil	This option includes off-site treatment of soil through physical methods such as sieving and separation, and land farming to stimulate biological degradation and volatilisation of COPCs. Periodic soil sampling is undertaken during the land farming process to determine if COPCs concentrations have been reduced to levels below the RGs. This option is considered when there is not sufficient space on-site to remediate site soils. As described above, the identified COPC nickel is not volatile or readily biodegradable and therefore, the identified concentrations, cannot be reduced though off-site land farming in a reliable or timely manner.

Remedial Option	Discussion
	The COPC asbestos (in the form of ACM) can be removed from soils to reduce levels below the RGs through treatment methods such as sieving and separation, given that the site soils are generally sand. Although there is some inherent risk and uncertainty of the success of the method.
Option 4: Excavation and off-site disposal of impacted soil	This option includes the excavation and transportation of soil to an off-site facility licensed to accept the waste. The volume of material is tracked through waste dockets and weight tickets at the receiving facility. This remedial strategy is appropriate to address the identified COPCs at the site in a timely manner and is reliable at removing COPCs from the site at concentrations above the RGs.
Option 5: Isolation and management of the soil on-site by capping/containment	This option includes the encapsulation and/or capping of impacted soils with an appropriately designed cap such as concrete or hardstand. This remedial strategy relies on removing source-pathway-receptor linkage by eliminating the pathway between contamination and receptors and is appropriate for managing the COPCs identified at the site at concentrations above the RGs. The site is not expected to require extensive bulk excavation, however some excavation of shallow soils and importation of new topsoil for landscaping is required.

Based on the options above, the advantages and disadvantages of each remedial or management option including cost and applicability are compared in compared in **Table 7-2** below.

Table 7-2 Remedial Options Evaluation

Option	Description	Advantages	Disadvantages	Outcome
1	Do Nothing	▪ Elimination of remedial costs	▪ Does not address the RGs listed in **Section 5**, and as such the land would remain unsuitable for the proposed use	Unsuitable
2	On-site treatment of soil (asbestos only)	▪ Material is retained onsite ▪ Reduces risk to human health and the environment ▪ Reduces costs of off-site disposal ▪ Potentially removes liability for ongoing management	▪ Only applicable to asbestos impacted soils ▪ Costs of the excavation and screening process ▪ Inherent risk that soils may not meet validation goals, causing rework ▪ Community and stakeholder considerations of working with asbestos on-site.	Suitable (asbestos only)
3	Off-site treatment of soil (asbestos only)	▪ Material is retained onsite ▪ Reduces risk to human health and the environment ▪ Reduces costs of off-site disposal ▪ Potentially removes liability for ongoing management	▪ Only applicable to asbestos impacted soils ▪ Costs of the excavation and screening process ▪ Additional transport costs compared to Option 2 ▪ Inherent risk that soils may not meet validation goals, causing rework	Unsuitable
4	Excavation and offsite disposal of impacted soils.	▪ Minimises potential risks to human health and environment ▪ Economically viable for smaller, localised areas of contamination ▪ Takes advantage of excavation required for construction purposes ▪ Suitable long-term remediation option ▪ Removes liability for ongoing management	▪ Costs of offsite disposal at a licensed facility. ▪ Potential for larger quantities of material than expected to require disposal. ▪ Costs to import soil for construction purposes if required ▪ This strategy may require over-excavation and/or require importation of fill following disposal to return the site to its former grade, with associated costs.	Suitable

5	Isolation and management of the soil on-site by containment below a capping layer or hardstand	▪ Material is retained onsite ▪ Reduces risk to human health and the environment ▪ Reduces costs of off-site disposal ▪ Reduces need for additional excavation works	▪ May require over-excavation in order to place impacted material at depths below likely disturbance ▪ May require stockpiling and extended periods of work under asbestos conditions ▪ May require ongoing verification that the remedial strategy is suitable in the long term through implementation of a Long Term Environmental Management Plan ▪ May require a notification on the land title of the contamination retained on site.	Suitable

Based on the analysis included in the previous sections, Cardno recommends a combination of Option 4 (excavation and off-site disposal of impacted soils) and Option 5 (isolation of the soil on-site by containment) in order to address the impacts at the Site. These options involve either excavation and removal of asbestos, nickel and hydrocarbon impacted soils, or retention on site beneath an suitable capping layer. These options take advantage of excavation works required for site establishment, and of the capping potential of hardstand proposed for the redevelopment. These remedial options are effective at mitigating human health and ecological receptor pathways at the site by either removing the hazard, or isolating the impacted material.

At the time of this report, the finalised design and business case for implementing each option were pending. As such, Cardno have provided two remedial scenarios incorporating the preferred options above to render the site suitable for the proposed land use. Details of the preferred remediation strategies are provided in **Section 8**.

8 Remediation Strategy

As described above, two remedial scenarios incorporating Option 4 and Option 5 are provided in the following sections. Both Remediation Strategy 1 and Remediation Strategy 2 are capable of mitigating or removing potential human health and/or ecological exposure pathways to the asbestos, nickel and hydrocarbon impacts identified, and rendering the site suitable for the proposed land use as a primary school.

Details of the remedial strategies are outlined in the sections below. A Construction and Waste Management Plan is included in **Section 9**. Potential risks to future site workers can be managed through standard WHS practices which are detailed in **Section 10**. The soil validation plan is detailed in **Section 11**.

Should areas of previously unidentified contamination, including asbestos impacted soil, be encountered during the remediation and validation works, additional remedial measures may be required. If encountered, the Unexpected Finds Protocol detailed in **Section 9.6** should be implemented. Details on the requirements during small and larger scale asbestos removal, including WHS measures, are included in **Section 9.4.**

8.1.1 Data Gap Investigation

As described in **Section 4.3**, soils within building footprints have been identified as a Data Gap requiring investigation. This step in the process is applicable to both Remediation Strategy 1 and Remediation Strategy 2.

During the development process, as buildings are demolished and the soils become accessible, a suitably qualified environmental consultant will be engaged to undertake sampling of soils. The number of sampling locations per building footprint will be assessed prior to works, accounting for the previous sampling undertaken during the DSI, the proximity of the sampling points, and the size of the building footprint. It is likely that between one and three sampling points would be required per area. Samples will be submitted to a NATA accredited laboratory for analysis of COPCs relevant to the site use, historical analytical results, and field observations.

During this phase of works, additional sampling and inspection to refine the lateral extent of areas of impact for asbestos and nickel containing soils can also be undertaken. During preparation of the DSI, the extent of impact was estimated as to the nearest sampling point not impacted with COPCs above the adopted screening criteria. Methods such as shallow trenching and step-out sampling in approximately 3 m increments laterally from the sampling point of concern can be undertaken to inform finalised excavation dimensions.

The analytical results of the sampling will be compared to the Tier I Screening Criteria established in the DSI for the site and included within the data tables in **Appendix B**. Any exceedances of the criteria (if detected) will be assessed for significance, and if necessary, any impacts requiring remediation or management will be addressed and added as an addendum to this RAP.

8.1.2 Classification of Soils

An indicative waste classification was completed as part of the DSI for the Site (Cardno 2019a). In order to appropriately manage soils at the site requiring off-site disposal, a formal waste classification for the site should be produced to characterise fill material, and any natural soils requiring excavation and disposal. A review of the data obtained in the DSI should be undertaken and any additional sampling conducted in accordance with NEPM guidance and/or the NSW EPA Excavated Natural Material Order (2014).

8.2 Remediation Strategy 1

Remediation Strategy 1 involves a combination of off-site disposal of soils (Option 4) impacted with asbestos above the HSL and nickel above the EIL, and continued on-site containment (Option 5) of soils impacted with hydrocarbons above the ESL. This approach takes advantage of stripping and removal of shallow soils required for the development in order to remedy the impacts identified.

The remedial approach is to be performed jointly by a suitably qualified environmental consultant, occupational hygienist and a licensed contractor and will involve the following general steps:

1. Stripping and excavation of asbestos and nickel impacted soils and disposal off-site at a licenced facility
2. Provision of an Asbestos Clearance Certificate for the removal of the asbestos impacted soils
3. Collection of soil validation samples from the walls and base of the resulting excavations
4. Importation of fill (if required) for landscaping, levelling and geotechnical requirements

5. Visual inspection and validation that hardstand has been restored across the TRH impacted area characterised by BH04

Prior to works commencing, an Asbestos Management Plan / Asbestos Removal Control Plan must be developed by the licensed contractor detailing the proposed works and site specific control measures. All works involving asbestos must be undertaken in accordance with these plans, and the recommendations in **Section 9.4**.

8.2.1 Stripping and Excavation – Asbestos and Nickel Containing Soils

In order to remove the asbestos and nickel impacted soils at the Site, stripping of shallow topsoil and fill for off-site disposal at a licenced facility will be undertaken The general process for the works is as follows:

1. Engagement of a licenced asbestos removalist to undertake works involving asbestos removal and remediation
2. Preparation of an Asbestos Management Plan / Asbestos Removal Control Plan detailing the removal process and site specific control measures to be implemented;
3. Notification to SafeWork NSW of the intention to remove non-friable asbestos
4. Provision of Asbestos Air Monitoring (AAM) during disturbance of asbestos containing soils
5. Stripping of asbestos impacted topsoil and fill within the eastern area of the site as shown in **Figure 3** in **Appendix A**.
6. Provision of an Asbestos Clearance Certificate for site surfaces following works
7. Stripping of nickel containing topsoil surrounding TP13 and TP06 to depths of approximately 0.4 mBGL as shown in **Figure 3** in **Appendix A**.
8. Importation of certified topsoil for landscaping of proposed areas.

It is estimated that approximately 0.3 to 0.5 m of topsoil and fill will be removed across the majority of the two areas, with localised deeper filling expected at TP03 to 1.2 mBGL. Borehole logs and a geological cross section of the area are provided in **Appendix D**. During the excavation, a suitably qualified environmental consultant should be present to inspect the material excavated and guide the vertical and lateral extent. This process reduces the potential for over- or under-excavation and enables documentation of the works for validation purposes.

8.2.2 Soil Validation Sampling

Once the shallow soils are excavated from the areas of concern, the environmental consultant shall collect validation samples from the walls and base on the resulting excavations. It is anticipated that the validation samples will be collected directly from the exposed soils by a hand protected with a dedicated nitrile glove.

Fill material and topsoil is required to be imported to the site for landscaping, backfill or geotechnical purposes. The material imported should be accompanied by appropriate documentation stating it meets the requirements for use at the Site. Check sampling should be undertaken on imported material to verify its suitability.

Additional details on the soil validation and imported fill sampling plan are included in **Section 11**.

8.2.3 Visual Validation – Area Surrounding BH04

Following site development works, validation that the soils surrounding BH04 containing hydrocarbons C_{16}-C_{34} above the adopted ESL remain encapsulated beneath hardstand will be undertaken. The inspection will include a photographic log and as-built plans detailing that hardstand remains over the impacted soils, and that completed receptor pathways from ecological receptors such as vegetation are not present.

8.3 Remediation Strategy 2

Remediation Strategy 2 involves a combination of off-site disposal of soils (Option 4) containing nickel above the EIL, and on-site containment (Option 5) of soils impacted with asbestos above the HSL, and hydrocarbons above the ESL. This approach takes advantage of stripping and removal of shallow soils required for the development, and the use of hardstand areas for capping of soils in order to remedy the impacts identified.

Containment of the asbestos impacted soils would be beneath hardstand paving located around the main school building in the eastern portion of the site. The placement of the material beneath hardstand is subject to its suitability as certified by a qualified geotechnical engineer.

The remedial approach is to be performed jointly by a suitably qualified environmental consultant, occupational hygienist and a licensed contractor and will involve the following general steps:

1. Stripping and excavation of nickel impacted soils and disposal off-site at a licenced facility
2. Stripping and excavation of asbestos impacted soils and natural soils (if required) and stockpiling on-site
3. Disposal of any geotechnically unsuitable material (i.e. topsoil with organic material) off-site to a licenced facility
4. Provision of an Asbestos Clearance Certificate for the excavation of the asbestos impacted soils
5. Collection of soil validation samples from the walls and base of the resulting excavations
6. Emplacement of asbestos containing soils beneath a marker layer, capping layer and hardstand
7. Importation of fill (if required) for landscaping, levelling and geotechnical requirements
8. Visual inspection and validation that hardstand has been restored across the TRH impacted area characterised by BH04
9. Development of a Long Term Environmental Management Plan (LTEMP) to ensure the long term effectiveness of the remedial strategy

8.3.1 Stripping and Excavation – Nickel Containing Soils

In order to remove the nickel impacted soils at the Site, stripping of shallow topsoil and fill surrounding TP06 and TP13 will be undertaken for off-site disposal at a licenced facility. The general process for the works is as follows:

1. Stripping of nickel containing topsoil surrounding TP13 and TP06 to depths of approximately 0.4 mBGL as shown in **Figure 3** in **Appendix A**.
2. Collection of soil validation samples from the walls and base of the resulting excavations
3. Importation of certified topsoil for landscaping of the area

It is estimated that approximately 0.4 m of topsoil and fill will be removed across the majority of the area. Borehole logs are provided in **Appendix D**.

8.3.2 Stripping and Excavation – Asbestos Containing Soils

In order to contain asbestos impacted soils at the site located adjacent the pre-school boundary fence, stripping and stockpiling of the material will be undertaken for site preparation. The general process for the works is as follows:

1. Engagement of a licenced asbestos removalist to undertake works involving asbestos removal and remediation
2. Preparation of an Asbestos Management Plan / Asbestos Removal Control Plan detailing the removal process and site specific control measures to be implemented;
3. Notification to SafeWork NSW of the intention to remove non-friable asbestos
4. Provision of Asbestos Air Monitoring (AAM) during disturbance of asbestos containing soils
5. Stripping of asbestos impacted topsoil and fill within the eastern area of the site as shown in Figure 3 in Appendix A and stockpiling on-site
6. Provision of an Asbestos Clearance Certificate for site surfaces following works

8.3.3 Soil Validation Sampling

Once the shallow soils are excavated from the areas of concern, the environmental consultant shall collect validation samples from the walls and base on the resulting excavations. It is anticipated that the validation samples will be collected directly from the exposed soils by a hand protected with a dedicated nitrile glove.

Fill material and topsoil is required to be imported to the site for landscaping, backfill or geotechnical purposes. The material imported should be accompanied by appropriate documentation stating it meets the requirements for use at the Site. Check sampling should be undertaken on imported material to verify its suitability.

Additional details on the soil validation and imported fill sampling plan are included in **Section 11**.

8.3.4 On-Site Containment – Asbestos Containing Soils

Following stripping, excavation and site preparation works, the asbestos containing soils are to be placed beneath areas proposed for hardstand capping, namely the hard paving areas surrounding the main school building. Preference can be given to placement in areas required to be raised, such as the south-east corner of the Site adjacent to Jacobson Avenue.

Capping layers shall meet the requirements outlined in the ANZECC (1999) Guidelines for the On-Site Containment of Contaminated Soil. The nominal capping layer requirements include:

- A marker layer of high visibility geofabric or similar must be placed beneath and above the asbestos containing soils once emplaced, including lining of the side walls
- A buffer layer of uncontaminated material (such as site soils validated as suitable for re-use, or engineered fill such as DGB) such that the minimum depth between the surface and the contaminated soils is at least 0.3 m
- An impervious hardstand layer such as concrete, pavement etc.

During and following placement, the base, sides and top of the emplaced soils are to be surveyed and recorded to allow the capping details and location of emplaced soils to be incorporated into a Long Term Environmental Management Plan (LTEMP) and Asbestos Register for the Site.

During emplacement of the soils and construction of the capping layer, regular inspections shall be undertaken to ensure correct capping depths and methods are being followed. Following completion, a validation inspection should be undertaken to ensure the capping layer has been suitably constructed, confirming the isolation of the source from receptors and include a photographic log and as-built plans.

8.3.5 Visual Validation – Area Surrounding BH04

Following site development works, validation that the soils surrounding BH04 containing hydrocarbons C_{16}-C_{34} above the adopted ESL remain encapsulated beneath hardstand will be undertaken. The inspection will include a photographic log and as-built plans detailing that hardstand remains over the impacted soils, and that completed receptor pathways from ecological receptors such as vegetation are not present.

8.3.6 Long Term Environmental Management Plan

Following completion of site remediation and validation works, a Long Term Environmental Management Plan (LTEMP) would be required to detail the location and nature of the emplaced soils, and the ongoing responsibilities and management requirements for the material. The LTEMP would include strategies to avoid the likelihood of breaching the capping layer, and procedures to be following in the event a breach occurs.

9 Construction Environmental and Waste Management Plan

The following sections include a Construction Environmental and Waste Management Plan which provides measures required to minimise the potential impact of works on the local environment, site workers and third parties. In all cases, environmental issues must be managed by the Principal Contractor in accordance with good environmental management practices with periodic supervision and documentation by the appointed environmental consultant. The purpose of these measures is to prevent site workers, the public and environmental exposure to potential health risks associated with these works.

9.1 Stockpile Management

Soil may require temporary stockpiling based on the timing of the construction activities. Soil placed in stockpiles around the site will be tracked according to the location of removal and location of stockpile. Stockpiles in place longer than 24 hours will be placed on an impervious base, compacted and covered with geofabric or similar.

Stockpiles are to be contoured to minimise the loss of material during rainfall, with upstream drainage and levee banks installed to divert water flows around the stockpile. Silt fencing is to be appropriately placed and installed to avoid sediment loading of stormwater drains and pipes. The installation of these controls is to be undertaken in accordance with the Landcom (2004) “Blue Book”.

The stockpile(s) should be clearly labelled, with stockpiles containing asbestos materials appropriately identified with warning signage. In the event that larger stockpiles of asbestos, an area can be lined with plastic and used as a stockpiling area. Any stockpiled asbestos contaminated material should be dampened and covered with either geofabric layer or black plastic, which is to be disposed of as asbestos waste after completion of asbestos works.

9.1.1 Waste Tracking

Tracking of waste movements around the site and material transported off-site for disposal is a critical component to demonstrate the remedial strategy is being implemented appropriately. Waste tracking will be achieved through use of waste dockets, survey of stockpiled materials or excavations and photographic documentation of movements of soil around and off-site. An environmental scientist should be on-site to oversee the majority of the remedial works to ensure that appropriate waste tracking procedures are employed.

9.2 Excavation Water Management

It is not anticipated that the water table or dewatering will be required as part of the development. Should any excavations or works accumulate water, or if dewatering is required, water contained or that collects in the soil excavations will be pumped out of the excavation to stormwater/sanitary sewer per Bayside Council disposal requirements. The details of the discharge/disposal requirements of any water that collects in the excavation will require further consideration during the remedial and validation works. Any water intended for disposal (either off-site or to stormwater/sanitary sewer) will require sampling to ensure it meets discharge water quality requirements.

9.3 Air and Dust

9.3.1 Odours

Due to the nature of impact on-site, it is not anticipated that excessive odours will result from remediation works. However, qualified and experienced technical staff will be on site during all excavation works and should excessive odour be generated as a result of the process, on-site spraying of the excavated material with a suitable odour suppressant (ie. Anotec) will be undertaken to minimise any odour. Other options that may also be employed are:

- A reduction in the size of the excavation face that is open at any one time to reduce the surface area generating the odour;
- Location of any temporary stockpiles of impacted soil as far as possible (and in the predominant down wind direction) from sensitive receptors;
- Smothering of the odours by covering the portion of the site that is generating the odour; and
- Watering the stockpiles and excavations to minimise volatile emissions.

During excavation works, a PID and a Lower Explosive Limit (LEL) meter may be used to obtain readings and document VOC concentrations during activities when soil and groundwater are being disturbed.

9.3.2 Dust Control

The Principal contractor will be responsible for ensuring that excavation, loading, carting, and stockpiling operations are dust free. This may include (but is not limited to):

- Stockpile protection;
- Water application on stockpiles and access roads;
- Limiting the area of exposed excavations and surfaces; and
- Wind fences around earthworks areas.

In the event that excessive dust is generated during any operations on-site, the works will cease and modifications to the process will be made before the operation is resumed. There must be no observable dust transported off-site.

9.4 Removal of Asbestos Waste

Based on results of the DSI, asbestos has been identified at the site requiring remediation or management. The following practices should be followed.

9.4.1 Methodology

Contractors working with asbestos or in asbestos affected areas of the site will be required to prepare and lodge a Safe Work Method Statement and Asbestos Removal Control Plan for the Principal Contractor's approval before commencing work. The chosen remedial contractor will be a certified Asbestos Removal Contractor. A Class B license is required for removal of bonded material and a Class A license for removal of friable asbestos. If the material is in a degraded state, then it would be considered friable by nature and therefore in that circumstance a Class A license contractor would be required. The Department of Education may also stipulate a Class A licensed contractor be employed for all asbestos works in accordance with their over-arching asbestos management procedures.

9.4.2 Stockpiling

If stockpiling of asbestos waste is required, the affected material should be placed on-site in a specified asbestos waste bin, prepared in accordance with referenced codes including:

- Locate bin on-site, away from adjacent land uses and other contaminated stockpiles, ideally over a concrete or bitumen paved area
- Bins shall be lined with minimum thickness of 200-micron heavy duty plastic sheet, formed and sealed to ensure leachate from asbestos contaminated material does not escape
- Exposed asbestos waste within the bin shall be lightly wetted regularly to reduce dust generation while loading and prior to plastic encapsulation;
- Asbestos waste within the waste bin shall be double wrapped in minimum thickness of 200- micron heavy duty plastic sheet or bagged in specific asbestos bags to code requirements;
- Sandbag or otherwise block any drainage around the waste bin
- Barricade the perimeter of the stockpiled/waste bin material
- In the event that larger stockpiles of asbestos or asbestos containing soils are required, an area can be lined with plastic and used as a stockpiling area
- Following removal of stockpiles of asbestos waste, an Asbestos Clearance Certificate for the stockpile area shall be issued by a suitably qualified occupational hygienist.

9.4.3 Decontamination

Adequate decontamination facilities are to be installed onsite in accordance with the guidelines specified in the Code of Practice for the Safe Removal of Asbestos [NOHSC2002 (2005)], Model Code of Practice for How to Safely Remove Asbestos (2018) and the NSW Occupational Health and Safety (Asbestos) Regulations 2003 and amendments

9.4.4 Respiratory Protection

If respirable fibres are identified, persons engaged in the asbestos removal work or accessing a contaminated area shall wear an approved respirator conforming to the requirements of SA/NZS 1715 and 1716.

9.4.5 Warning Notices

Suitable warning signs shall be placed around the works area. These signs shall comply with all relevant acts, regulations and codes of practice, including but not limited to:

- AS 1319-1983 – Dangerous Goods Act 1985;
- Dangerous Goods (Storage & Handling) Regulations 2000; and
- Dangerous Goods (Placarding of Workplaces) Regulations 1985.

9.4.6 Loading and Transporting of Asbestos Contaminated Materials (If Required)

If required, asbestos impacted waste is to be removed and disposed of in accordance with all relevant acts, regulations, standards and codes of practice.

Removal of waste materials from the site shall only be carried out by a licensed contractor holding appropriate licenses, consents and approvals from NSW EPA, SafeWork and/or other Authorities to transport and dispose of the asbestos waste materials according to the classification guidelines.

Asbestos waste must be transported in a covered leak-proof vehicle to prevent any spillage or dispersal of waste. Bonded asbestos not stored in a bag must be wetted before it is transported offsite. Asbestos fibres and dust waste are classified as friable and must be covered in a manner to prevent the emission of any dust.

Details of all contaminated materials removal from the site shall be documented with copies of weighbridge slips, trip tickets and consignment disposal confirmation (where appropriate). Such information should be provided to the Site Owner for reporting purposes. A site log shall be maintained by the licensed removal contractor for all waste stockpiles (numbered locations), to enable the tracking of disposed loads against on-site origin and location of the materials.

Measures shall be implemented to ensure no asbestos contaminated material is spilled onto public roadways or tracked off-site on vehicle wheels. Such measures could include the deployment of a vehicle washing/cleaning facility, which should be placed at a location before the site egress. The facility shall be capable of handling all vehicles and plant operating on site. Residue from the cleaning facility will be deemed contaminated unless show by validation to be below Reportable Acceptance Criteria.

The proposed waste transport route should be approved by council. Each load leaving the site shall be recorded. Any vehicle used for the transport of contaminated waste must be inspected before leaving the site to ensure that all residual waste is removed from the outside of the vehicle.

9.4.7 Asbestos Fibre Monitoring

A suitably qualified professional shall carry out appropriate air monitoring of the workplace and surrounding areas during asbestos remediation/removal works in accordance with the Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Dust [NOHSC:3003(1988)] including but not limited to:

- Air monitoring at the commencement of asbestos removal activity on the site;
- Air monitoring continuously in areas related to hazard removal work;
- Air monitoring for clearance following removal of friable asbestos.

Air-monitoring results are to remain below control levels in designated areas and monitored by the environmental consultant / hygienist. These control levels are occupational hygiene best practice and are not health based standards (they are below the concentration set in NES for asbestos).The control levels shall be as per **Table 9-1:**

Table 9-1 Asbestos Control Levels

Control level (airborne asbestos fibres/ml)	Control / Action
< 0.01	Continue with control measures
≥ 0.01	Review control measures
≥ 0.02	Stop removal work and find the cause

9.4.8 Clearance Inspections

Following the removal of asbestos-contaminated materials, an inspection must be carried out with the licensed removal contractor, in order to establish areas which may require further remediation. All asbestos waste material must be removed from the work area prior to a clearance inspection.

The environmental consultant/hygienist may terminate the inspection if the work area is deemed to be contaminated and reconvene the inspection after follow-up remediation works to a satisfactory standard.

9.5 Acid Sulfate Soils Management

Potential Acid Sulfate Soils (PASS) have been identified at the site beneath the water table and depths of 7mBGL. Therefore, if ASS are proposed to be disturbed, the procedures outlined in the Acid Sulfate Soils Management Plan (ASSMP) (Cardno 2019b) must be implemented during the remedial and development process.

9.6 Unexpected Finds

In the case that an environmental consultant is not available for oversight, workers will be vigilant for hazardous materials that may be uncovered during excavations. Unexpected finds include, but are not limited to, odour, visual contamination, ASS or PASS, deleterious material inclusions, asbestos containing material, Underground Storage Tanks (USTs) or any other suspect materials. Any unexpected finds will be reported to the Contractor's on-site manager immediately. Additionally, the site owner/occupier should be informed as soon as practical following an unexpected find.

If hazardous materials are uncovered / discovered during excavations the Contractor shall:

- Cease all work in that vicinity (and fence the area if appropriate)
- Remove workers from the vicinity
- An experienced environmental consultant should be contacted to assess the potential risks associated with the Unexpected Finds and provide appropriate management options
- Investigate the nature of the risk of the materials, determine the appropriate response and document the actions in accordance with contractual obligations.

In the event of a serious unexpected find, which could cause harm to human health and/or the environment, the Bayside Council and the NSW EPA may need to be informed.

The risks posed by the removal works to Aboriginal or European heritage are expected to be minimal. However, in the event potential heritage items are encountered during excavations, works will cease and the Site Supervisor notified

9.7 Stormwater

9.7.1 Erosion and Sedimentation Control

Cleared areas and exposed excavations may promote erosion. The following erosion and sediment controls will be implemented:

- Limiting the extent of cleared areas and exposed excavations
- Backfilling of excavated areas as soon as practicable
- Diversion of stormwater from active areas using hay bales or sediment fences
- Covering of temporary stockpiles with plastic (HDPE) or geofabric and placement of silt socks around excavations when necessary
- Covering open stormwater grates in the vicinity of stormwater pits and excavations with silt fences or other appropriate materials
- Placement of stockpiles away from footpaths, roadways, kerbs, access ways or drainage lines
- Minimising translocation of contaminated soils throughout the site by ensuring excavator operators do not track over contaminated areas
- If possible, a single vehicle entry and exit to minimise translocating soil

- Depending on the volume of soil to be excavated, rumble strips may be required at the site access in order to prevent contaminated soil being transported off-site.

9.7.2 Water Management

Stormwater runoff quality may be adversely affected in the event of rainfall. Hay bales or similar mitigation measures will be placed near down-gradient stormwater entry points to prevent entry of contaminated sediment to stormwater, which may result from the project works.

9.8 Noise

Hours of operation, noise control and noise generating activities will comply with the DA requirements for the project.

9.9 Land Disturbance

Works include excavation, loading, carting and stockpiling operations of associated soils. These works shall be carried out in an orderly manner to minimise impact to the surrounding residences.

- Excavation – the removal of soil shall be performed by the appointed excavation contractor using an excavator. If a transport truck is not on-site during excavation and soil will need to be temporarily stockpiled, no contaminated soils should be placed on areas validated as suitable for the proposed land use. In these locations, soil shall be excavated and placed on black plastic liners or on concrete surfaces in discrete stockpiles prior to off-site disposal. Stockpiles should be segregated for each potential contamination source.
- Loading and Carting – the loading of the stockpile material shall occur with an appropriately sized machinery. The trucks and trailers shall be covered for transport as deemed necessary, and shall meet any other statutory requirements.

9.10 General

The appointed Principal Contractor shall ensure compliance with relevant SafeWork NSW guidelines and Work Health and Safety Acts and Regulations. The Principal Contractor shall also ensure compliance with any amendments to the Act or Regulations during the project duration.

The Principal Contractor shall monitor and control the access of all persons to the site and ensure that no unauthorised persons enter the site during remedial works (wherever practicable). All site personnel and visitors will be inducted and shall wear appropriate personal protective equipment (PPE).

The appointed Principal Contractor shall undertake additional underground and overhead service location specifically in areas surrounding the remediation location.

Any open excavation(s) are to be barricaded in accordance with the NSW Work Health and Safety Act; Clause 16 (1) and the Construction Safety Regulation Section 73, as administered by SafeWork NSW.

The appointed Principal Contractor shall install warning signs on the barricades surrounding the excavations, including but not limited to: DANGER: OPEN EXCAVATIONS; DANGER: NO SMOKING.

9.10.1 Vehicles

The appointed Principal Contractor shall ensure all vehicles are suitably contained and covered in the transport of all debris, spoil, rubbish and materials to or from the site, such that spillage or contamination of adjoining and other areas or property shall be prevented.

Vehicles shall also be maintained to prevent the transfer of mud or wastes onto adjacent streets or other areas. If wheel treads contain significant quantities of site soils the contractor will manually remove and dispose in stockpiles.

9.10.2 Traffic Control

The Principal Contractor shall supply signs and safety cones; erect at the appropriate entry and exit points; and maintain these devices in good condition. Excavation works, stockpiles and other hazards, shall be individually barricaded at all times. The site will be fully fenced to exclude public.

On-site pedestrian traffic will be averted from the work areas and excavation by means of signage, fencing and safety barricading.

9.10.3 Refuse Disposal

All site refuse, including food, equipment wrappings, unused materials, etc. shall be handled and disposed of appropriately into a skip.

9.10.4 Site Security

The site shall be secured by a lockable fence around the perimeter of the site and access to the site will be restricted. All excavations and above-ground remediation equipment will be barricaded with reflective barricades, with pertinent reflective signage. Keys to the gate will be restricted to approved personnel.

9.10.5 Training

Low environmental awareness of site workers may result in environmental impact including cross contamination of soil layers and off-site movement of contaminated soil. Accordingly, staff awareness training, inductions and daily tool box meetings shall be conducted.

9.10.6 Roles and Responsibilities

9.10.6.1 Client

A summary of the client's role and responsibilities includes:

- Overall responsibility for the project development and outcomes of the RAP
- Liaison with neighbours and other stakeholders
- Engagement of environmental management consultant to oversee implementation of the RAP
- Engagement of contractors to perform further investigation works, and any subsequent contaminated soil disposal and site rehabilitation works as required
- Provision of health and safety measures for site personnel and the works area
- Maintain relevant records associated with the RAP.

9.10.6.2 Principal Contractor

The principal contractor engaged for the management of impacted soils must:

- Undertake all works in compliance with the provisions of the RAP
- Liaison with site supervisor regarding progress of works
- Report any environmental incidents and unexpected finds to the site supervisor
- Collate all project documentation including landfill disposal dockets (where relevant)
- Conduct works in accordance with the Site WH&S plan.

9.10.6.3 Site Supervision

A Site Supervisor, who is an experienced environmental scientist familiar with the implementation of environmental controls, will be appointed to take responsibility for implementation of this RAP at the Site during excavation of impacted soils. The Site Supervisor's duties include:

- Regular inspection of the site and site activities
- Completion of the daily reporting sheet
- Provision of on-site advice and direction with regard to implementation and compliance with the RAP
- Liaison with site personnel/contractors and the client regarding progress of works
- Provide and maintain a photographic record of works and results
- Identification, reporting and management of the rectification of any non-conformances with the RAP.

10 Work Health and Safety

10.1 WHS Planning and Preparation

Prior to mobilising to complete the remedial works, the Principal Contractor and appointed remedial contractor will develop site and project specific Work Health and Safety Plans (WHSPs), Safe Work Method Statements and Job Safety Analyses for the scope of works to be undertaken. The WHS documentation will detail measures to mitigate potential risks to site workers, third parties and the local environment during the remedial works. General, minimal WHS procedures to be implemented during the remedial works are outlined as follows:

- The contaminants identified (asbestos) poses potential for exposure via inhalation. Respirators, dust masks and disposable coveralls should be available on site for all works involving asbestos. The additional management practices detailed in **Section 9.4** should also be followed and included in the WHSPs.
- Potential exposure pathways for contaminants include dermal absorption (skin contact, ingestion) of dust. All workers should wear long sleeve trousers/shirts on-site. Gloves and safety glasses shall be worn by all workers involved in handling of potentially contaminated soils.
- Protective footwear (steel capped boots) to be worn on site at all times.
- Hearing protection should be worn during soil removal activities (or when working in the vicinity of heavy plant/machinery).
- Unauthorised access should be limited by ensuring that security gates are locked at the completion of each day's work.
- Excavations greater than 1.5m depth need to be "stepped" by the appointed civil contractor or otherwise made safe.
- Personnel are not to enter excavations (>1m depth) at any time.
- PPE shall be provided in sufficient quantities to provide for the duties of each on-site individual.

10.2 Incident Management Plan

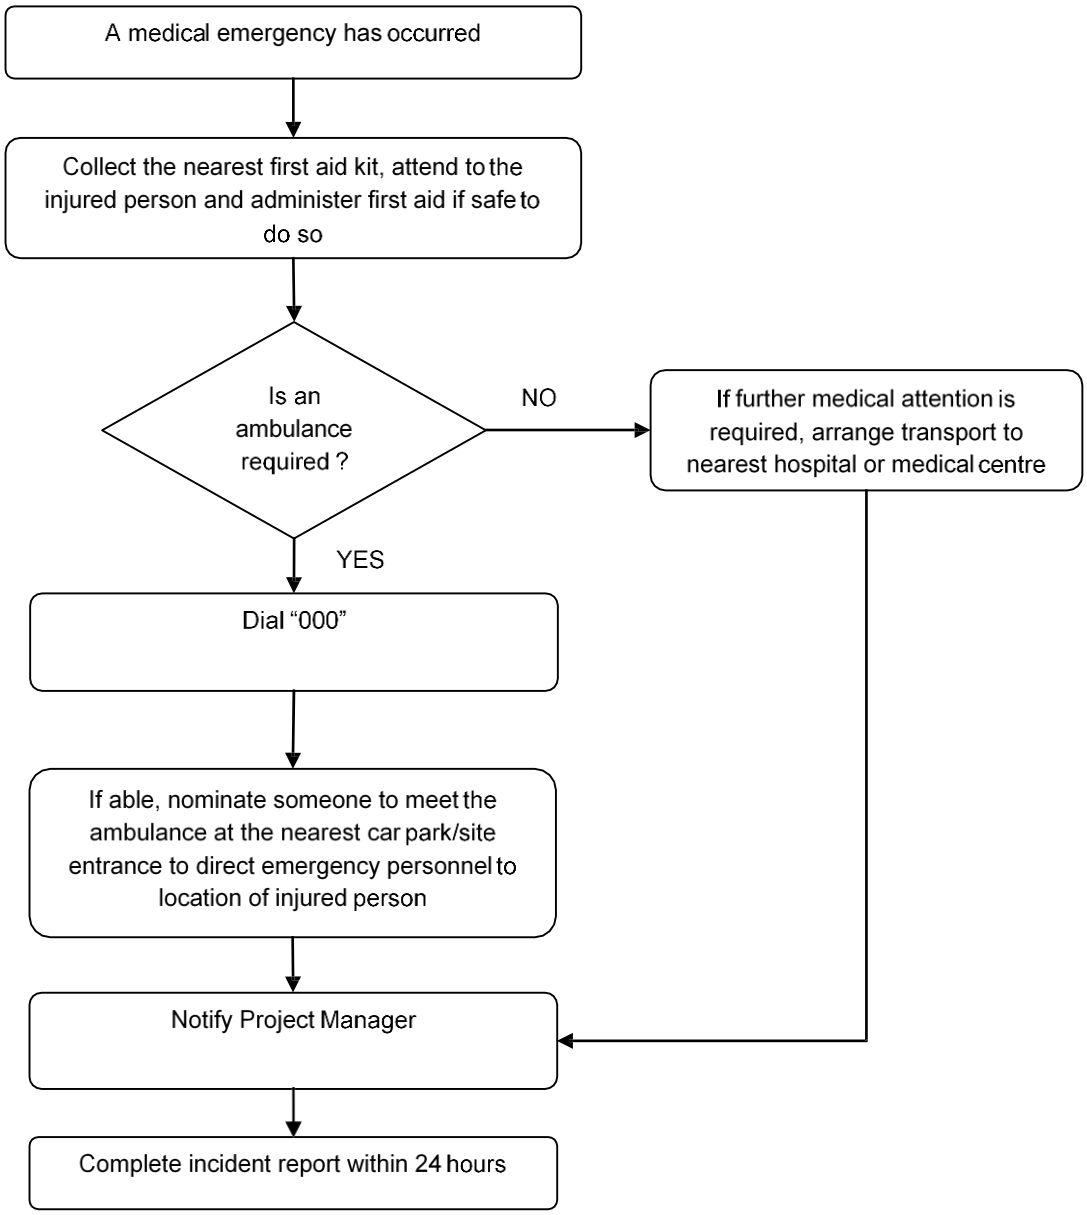
Emergency response includes pre-emergency planning, lines of authority and communication, emergency recognition and prevention, site control, evacuation routes, decontamination and first aid.

10.2.1 Medical Emergency/Serious Injury

In the event of an accident or an emergency situation involving a serious injury or medical emergency, immediate action must be taken by the first person to recognise the event (refer to flowchart below).

A portable and fully-stocked first aid kit shall be retained on site at all times.

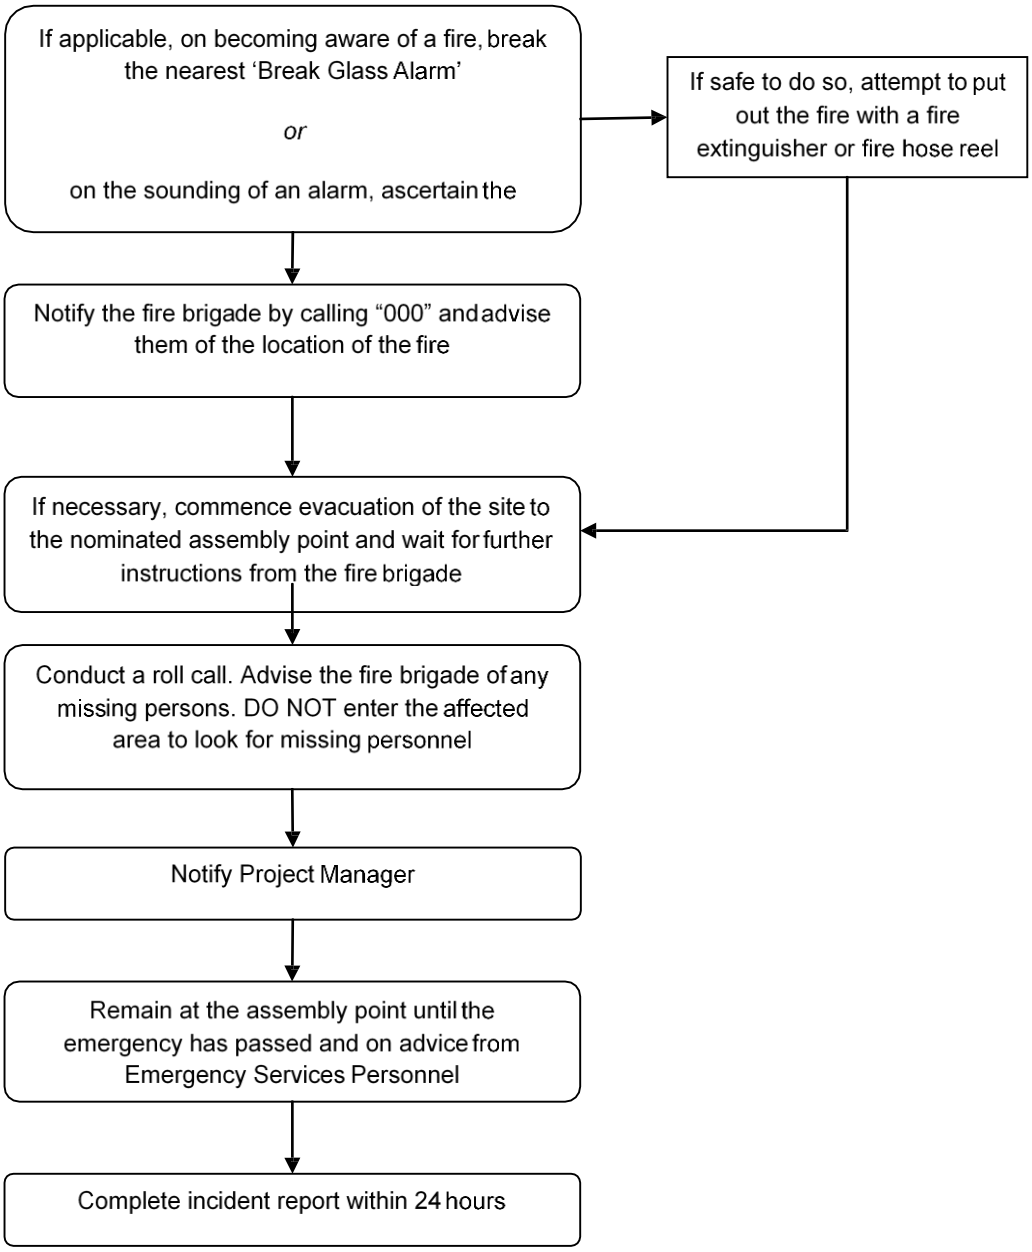
In the event of a fatality, the Police, Site Manager, and Project Manager shall be notified immediately.



A medical emergency has occurred
Collect the nearest first aid kit, attend to the injured person and administer first aid if safe to do so
Is an ambulance required ?
NO
If further medical attention is required, arrange transport to nearest hospital or medical centre
YES
Dial "000"
If able, nominate someone to meet the ambulance at the nearest car park/site entrance to direct emergency personnel to location of injured person
Notify Project Manager
Complete incident report within 24 hours

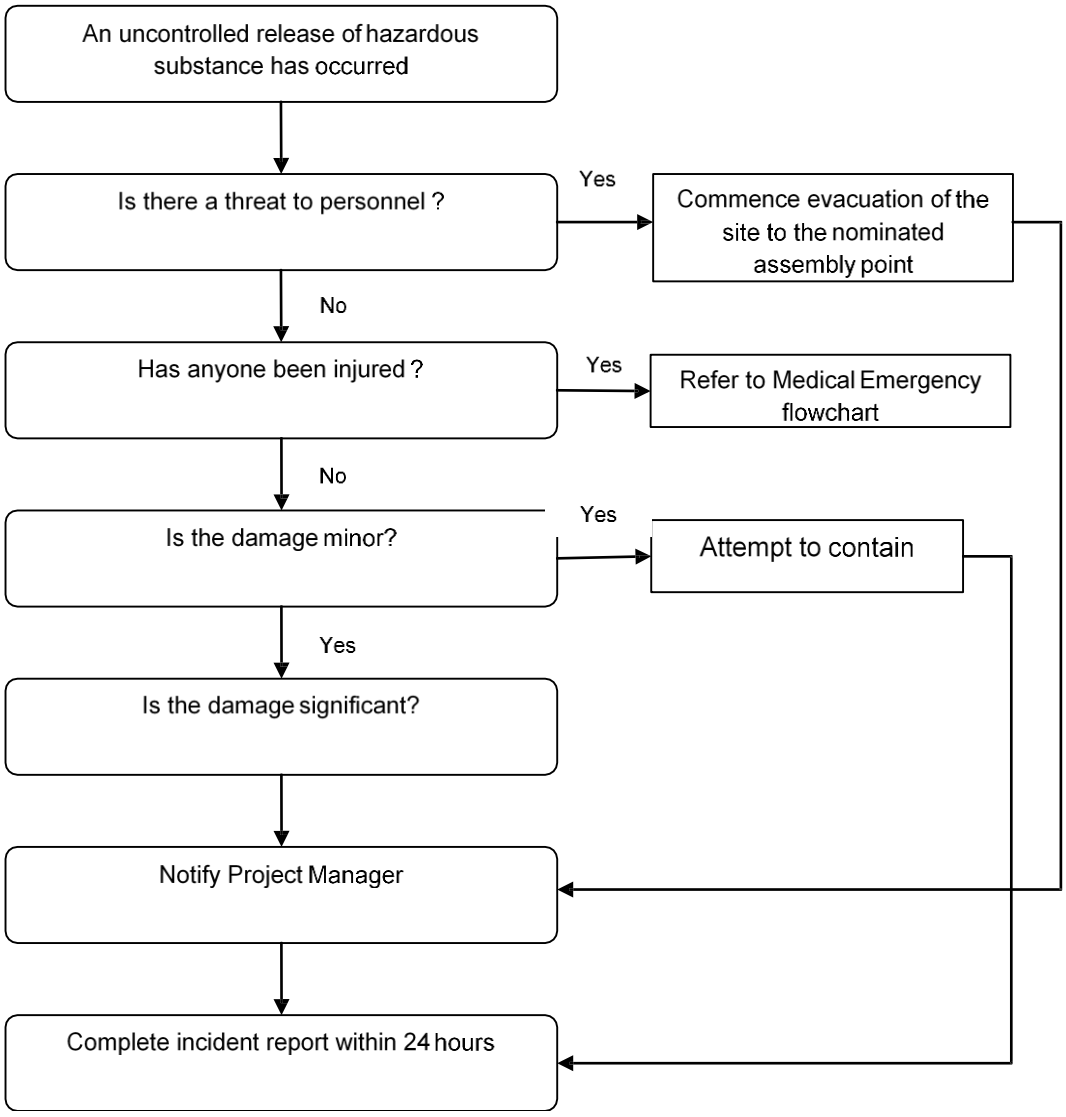
10.2.2 Fire

In the event of a fire, the actions outlined in below shall be taken:



10.2.3 Environmental Incident

In the event of an environmental incident, the actions outlined below shall be taken:



10.3 Incident Reporting

Cardno employees and sub-contractors are required to verbally report incidents, accidents and near-misses to the Project Manager immediately after an event has occurred. It is the responsibility of the Project Manger to notify the Client Representative immediately after the occurrence of an environmental incident and to forward the completed a written incident report within 24 hours. Additional investigations may be necessary should a serious incident occur.

10.4 Community Consultation

Cardno anticipates that community consultation will be required during the course of the remedial and validation works. Unless incorporated into other management documents, a detailed Community Consultation Plan may be developed to manage communications with third parties.

11 Sit Validation Requirements

During and after the remedial works are complete, additional soil samples will be required to:

- Validate the material proposed for re-use on-site is suitable for the proposed land use as a primary school
- Validate that soil remaining in place at the site is suitable for the proposed land use as a primary school
- Validate that on-site containment measures have been implemented appropriately (as required)
- Validate any imported soil is suitable for the proposed mixed commercial land use and is not a potential source of contamination.

11.1 Visual Inspection and Survey

Following excavation of asbestos impacted soils, and capping layer construction (if Remediation Option 2 is selected) a validation clearance inspection should be undertaken by a suitably qualified occupational hygienist to ensure asbestos containing materials have been removed from areas where impacted fill was required to be excavated. Areas of the Site in which asbestos materials and / or hydrocarbon containing soils have been capped should be inspected by a suitably qualified environmental consultant and validated to ensure adequate capping has been implemented. Initial survey followed by periodic inspections during the capping construction shall be undertaken to ensure recommended capping thicknesses are achieved and the Remedial Objectives for this project have been meet.

11.2 Post Excavation Validation Sampling

After soil is excavated from the area characterise by TP06 and TP13, and in asbestos impacted adjacent the eastern boundary, soil samples from the base and walls of the resulting excavation will be collected to validate the soil remaining on-site. The recommended density for collection of validation soil samples is 1 sample per 10 linear metres of sidewall and 1 sample per 100 m^2 of excavation base. However, this density should be doubled when asbestos has been identified as a COPC based on requirements in the NEPM.

Therefore:

- A minimum of one validation soil sample will be collected per 5 linear metres of sidewall and 50 m^2 of excavation base area for asbestos analysis in the east of the site;
- A minimum of one validation soil sample will be collected per 10 linear metres of sidewall and 100 m^2 of excavation base area for analysis of nickel in the area surrounding TP06 and TP13.

The post excavation soil samples will be analysed for the same parameters as listed in **Section 12.1**.

If the analytical results meet the RGs detailed in **Section 6**, the soil will be deemed suitable to remain in place under the proposed land use as a primary school.

11.3 Soil Re-Use Validation

If soils are required to be excavated and re-used on site for backfill or construction purposes, a review of data obtained during the DSI should be undertaken and, if necessary, additional soil samples collected by a suitably qualified environmental consultant. The target sample density for soil intended for re-use is 1 sample per 25 m^3 in accordance with NEPM guidance. The additional soil samples should be analysed by a NATA accredited laboratory for COPCs including (but not limited to) the following:

- Total Recoverable Hydrocarbons (TRH);
- Benzene, toluene, ethylbenzene, xylenes, naphthalene (BTEXN)
- Polycyclic aromatic hydrocarbons (PAHs)
- Eight metals (As, Cd, Cr, Cu, Ni, Pb, Zn and Hg)
- Quantitative Asbestos per NEPM.

If the soil analytical results of the additional sampling meet the NEPM Tier I screening guidelines for the proposed land use as a primary school, the soil will be deemed suitable for re-use on-site as fill.

11.4 Excavated Natural Material Sampling

As stated previously, excavation of natural soils for site development will be required and potentially disposed of off-site. There is no indication that the natural soils at the site above the water table are impacted with measurable COPCs and it is possible that they can be classified as ENM.

Soil samples of the natural material will be collected across the proposed excavation footprint. Soil samples will be collected in accordance with the sampling densities outlined in Tables 2 and 3 of the ENM Order for analysis of COPCs and other physical attributes listed in Table 4 in the ENM Order. These parameters include:

- TPH/TRH C10 to C36;
- BTEX;
- Total PAHs;
- The metals Hg, Cd, Pb, As, Total Cr, Ni and Zn;
- Physical parameters including pH, electrical conductivity, and foreign material inclusions

11.5 Imported Fill Sampling

Any soil imported to the Site, other than engineered materials, should be sampled to determine its suitability for the proposed land use. If imported fill material is accompanied by a VENM or ENM certificate, one sample per 1,000 m^3 should be collected. If imported fill material is not accompanied by a VENM or ENM certificate, one sample per 250 m^3 should be collected. Imported fill samples should be analysed for the COPCs and analytical methods including:

- Total Petroleum/Recoverable Hydrocarbons (TRH);
- Benzene, Toluene, Ethylbenzene, Total Xylenes and Naphthalene (BTEXN);
- Polycyclic Aromatic Hydrocarbons (PAHs);
- Heavy Metals (Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel and Zinc);
- Asbestos (weight/weight %)
- pH, EC and foreign materials

12 Contingency Plan

As with any remedial scope of work, unanticipated events or outcomes may be encountered during the remedial program. Cardno has developed contingencies throughout the RAP to mitigate risks associated with potential issues that may arise during the remedial works. Contingency items considered for the current remediation are summarised in **Table 12-1** noting that there may be other unforeseen circumstances that may arise during the course of the works.

Table 12-1 Remedial Works Contingency Plan

Potential Issue	Contingency Measure
Evidence of additional contamination not previously identified	Further assessment involving intrusive investigations or remediation may be required to quantify and delineate potential contamination.
Greater than anticipated volumes of soil require management	The proposed remedial strategy is scalable in that additional soil can be excavated. Off-site soil disposal is scalable for if large, unexpected volumes of soil are produced. In the case of additional contaminated soil being identified and on-site containment is feasible, excess natural soils may meet the definition of Excavated Natural Material for beneficial re-use off-site, and retention of impacted soils at the site.
Unintentional release of stockpiled soil or water drained from stockpile	Construction of appropriate erosion and sedimentation controls around stockpiles Spill equipment will be staged on-site during the remedial works. Weather forecasts will be monitored throughout the course of the remedial works to anticipate any significant storm events. Works may be suspended if large volumes of rain are anticipated. Soil stockpiles would be sufficiently covered prior to any storm event.
Water ingress to excavation is unmanageable	Consider aggressive means to remove the water (multiple vacuum trucks) or below ground dewatering equipment. Consider installation of a physical barrier to block the water ingress.

13 Regulatory Approvals / Licences

13.1 Regulatory Compliance Requirements

Regulations and sources of regulatory guidance relevant to this remediation programme relate to waste management, environment protection and occupational health and safety.

13.1.1 Waste Management

The remediation program must comply with the following legislation and policies

- *Waste Avoidance and Resource Recovery Act 2001*.
- *Protection of the Environment Operations (Waste) Regulation 2005*.
- NSW EPA (2014) *Waste Classification Guidelines.*

13.1.2 Environmental Protection

The remediation of asbestos impacted soils must be carried out in a manner compliant with national, state and local environmental regulations, including the

- *Protection of the Environment Operations Act 1997.*
- State Environmental Planning Policy (SEPP) 55 – Remediation of Land;
  - Given the minor nature of remediation work proposed to be undertaken at the Site, the works are considered to be Category 2 remediation work – work not needing consent. Whilst consent is not required, Clause 16 of SEPP 55 requires Council to be notified in writing at least 30 days before the commencement of work, and supply a Site Validation Report within 30 days of completion of works.
- *Contaminated Land Management Act 1997*
- National Environmental Protection (Assessment of Site Contamination) Measure 1999 (as amended 2013).

14 Conclusions

Cardno was engaged by DWP to prepare a RAP to guide and inform the remediation of soils at Kyeemagh Infants School, corner of Jacobson Avenue and Beehag Street, Kyeemagh NSW. The Site is proposed to be redeveloped from its current configuration as an infants school into a K-6 capable primary school.

The Site is located on a parcel of land that has been in use as a school since 1942. The DSI conducted by Cardno in 2018/19 identified areas of COPCs within soils requiring remediation or management. The identified areas of concern were an area of asbestos impacted soils above the adopted NEPM HSL in the east of the site, an area of nickel impacted topsoil above the site specific EIL in the northern area of the site, and an area of TRH C_{16}-C_{34} impacted soil above the adopted ESL beneath hardstand in the south west.

The objectives of the RAP are to define the soil remediation and validation requirements for the previously identified asbestos, nickel and TRH impacts at the Site. Additionally, the remedial strategies are designed to minimise the potential risks to human health and the environment relative to the proposed land use of the property as a primary school.

Cardno evaluated potentially applicable remedial alternatives to address the potential risks to human health and the environment. Due to the finalised design and business case for each option being pending at the time of this report, two remedial strategies are provided which will eliminate receptor pathways to the identified COPCs at the site. The recommended strategies involve a combination of off-site disposal of impacted soil, and on-site containment beneath hardstand. These strategies provide the most efficient option for remediating the site, taking advantage of soil removal required for construction purposes and the capping potential of hardstand for the new development.

The remedial strategies are to be performed jointly by an environmental consultant, occupational hygienist and a licensed contractor and will involve the following general steps:

Remediation Strategy 1:

1. Stripping and excavation of asbestos and nickel impacted soils and disposal off-site at a licenced facility
2. Provision of an Asbestos Clearance Certificate for the removal of the asbestos impacted soils
3. Collection of soil validation samples from the walls and base of the resulting excavations
4. Importation of fill (if required) for landscaping, levelling and geotechnical requirements
5. Visual inspection and validation that hardstand has been restored across the TRH impacted area characterised by BH04.

Remediation Strategy 2

1. Stripping and excavation of nickel impacted soils and disposal off-site at a licenced facility
2. Stripping and excavation of asbestos impacted soils and natural soils (if required) and stockpiling on-site
3. Disposal of any geotechnically unsuitable material (i.e. topsoil with organic material) off-site to a licenced facility
4. Provision of an Asbestos Clearance Certificate for the excavation of the asbestos impacted soils
5. Collection of soil validation samples from the walls and base of the resulting excavations
6. Emplacement of asbestos containing soils beneath a marker layer, capping layer and hardstand
7. Importation of fill (if required) for landscaping, levelling and geotechnical requirements
8. Visual inspection and validation that hardstand has been restored across the TRH impacted area characterised by BH04
9. Development of a Long Term Environmental Management Plan (LTEMP) to ensure the long term effectiveness of the remedial strategy

This RAP also includes a Construction Environmental and Waste Management Plan, a Work Health and Safety Plan and a Contingency Plan in addition to waste classification and soil validation requirements.

Standards Australia (1999) *Australian Standard AS 4482.2-1999 - Guide to the sampling and investigation of potentially contaminated soil. Part 2: Volatile substances*. Standards Australia, Homebush, NSW.

16 Limitations

This report has been prepared for the client, and their agents and the local council planning authority for the purpose of guiding and informing the remediation programme. Use of the report by other parties for different purposes shall be at their own risk. Whilst the assessment has used current industry practice to characterise the nature and extent of contamination at this site, and the author is satisfied with the quantity and quality of the information presented as the basis for this report, the Cardno cannot guarantee completeness or accuracy of any data, descriptions or conclusions based on information provided to it by others.

The agreed scope of this assessment has been limited for the current purposes of the Client. The remedial approach presented in this RAP may not remediate all types of contamination occurring in all areas of the site.

This Document has been provided by Cardno subject to the following limitations:

- This Document has been prepared for the particular purpose outlined in Cardno's proposal and no responsibility is accepted for the use of this Document, in whole or in part, in other contexts or for any other purpose;
- The scope and the period of Cardno's services are as described in Cardno's proposal, and are subject to restrictions and limitations. Cardno did not perform a complete assessment of all possible conditions or circumstances that may exist at the site;
- Conditions may exist which may limit the effectiveness of the proposed remedial approach, including geologic and hydrologic conditions, the presences of services or other underground infrastructure. Accordingly, more than one phase of remediation may be required to achieve the goals of this RAP;
- In addition, it is recognised that the passage of time affects the information and assessment provided in this Document. Cardno's opinions are based upon information that existed at the time of the production of the Document. It is understood that the services provided allowed Cardno to form no more than an opinion of the actual conditions of the site at the time this Document was prepared and cannot be used to assess the effect of any subsequent changes in the quality of the site, or its surroundings, or any laws or regulations.
- Where data supplied by the client or other external sources, including previous site investigation data, have been used, it has been assumed that the information is correct unless otherwise stated. No responsibility is accepted by Cardno for incomplete or inaccurate data supplied by others.
- Cardno may have retained sub consultants affiliated with Cardno to provide services for the benefit of Cardno. To the maximum extent allowed by law, the Client acknowledges and agrees it will not have any direct legal recourse to, and waives any claim, demand, or cause of action against, Cardno's affiliated companies, and their employees, officers and directors.

This RAP is not any of the following:

- A Site Audit Report or Site Audit Statement as defined under the Contaminated Land Management Act, 1997
- A Detailed ESA or Environmental Site Investigation sufficient for an Environmental Auditor to be able to conclude a Site Audit Report and Site Audit Statement
- A detailed hydrogeological assessment in conformance with NSW DEC (2007) Contaminated Sites: Guidelines for the Assessment and Management of Groundwater Contamination
- An assessment of groundwater contaminants potentially arising from other sites or sources nearby

A total assessment of the site to determine suitability of the entire parcel of land at the site for one or more beneficial uses of land.

Notes to Table:

1 - pH values >4 and <5.5 are acid and may be the result of some previous or limited oxidation of sulfides, but is not confirmatory of actual acid sulfate soils

2 - pH readings of pH≤4, indicates that actual acid sulfate soils are present with the sulfides having been oxidized in the past, resulting in acid soils (and soil pore water)

3 - The lower the final pH_{FOX} value is, the better the indication of a positive result.
» If the pH_{FOX} < 3 and there was a strong reaction to the peroxide, there is a high level of certainty of a potential acid sulfate soils. The more the pH_{FOX} drops below 3, the more positive the presence of sulfides.
» A pH_{FOX} 3-4 is less positive and laboratory analyses are needed to confirm if sulfides are present.
» For pH_{FOX} 4-5 the test is neither positive nor negative. Sulfides may be present either in small quantities and be poorly reactive under quick test field conditions.
» For pH_{FOX} >5 and little or no drop in pH from the field value, little net acid generating ability is indicated.

4 - If the pH_F value is at least one unit below field pH_{FOX}, it may indicate potential acid sulfate soils. The greater the difference between the two measurements, the more indicative the value is of a potential acid sulfate soils.

5 - coarse soils comprise sands to loamy sands - Approximate clay content (% < 0.002mm) ≤ 5%

6 - Medium soils comprise sandy loams to light clays - Approximate clay content (% < 0.002mm) between 5 and 40%

7 - Fine soils comprise medium to heavy clays and silty clays - Approximate clay content (% < 0.002mm) ≥ 40%

8 - NT - Not Tested

9 - 1.0; No reaction to slight. 2.0; Moderate reaction. 3.0; Strong reaction with persistent froth. 4.0; Extreme reaction.

Liming Rate: A Safety Factor of 1.5 has been incorporated to account for the mixing process

Acid Trail / Net Acidity - Indicates acidic soils, however may not indicate Acid Sulfate Soils

Contaminant Exceedance Indicators:

Bold	Indicates the laboratory result is within the specified range of the ASSMAC (1998) Actual Acid Sulfate Soil Indicator Values
Italics	Indicates the laboratory result either exceeds or is within the specified range of the ASSMAC (1998) Potential Acid Sulfate Soil Indicator Values
	Indicates exceedance of the ASSMAC (1998) Action Criteria triggering the need to prepare a ASS Management Plan
	Indicates the requirement for localised lime treatment of the material, that is, when the laboratory results for SCr (%w/w) > 0.03 and the SCr (mole H=/t) > 18

Executive Summary

Cardno (NSW/ACT) Pty Ltd ("Cardno") was engaged by DWP Australia Pty Ltd ("the Client") to undertake a Detailed Site Investigation (DSI) for the proposed redevelopment of Kyeemagh Infants School, located on the corner of Jacobson Avenue and Beehag Street, Kyeemagh NSW 2216 ("the Site"). The Site is legally identified as Part Lot 1 within Deposited Plan (DP) 335734 and Lot 1 within DP 120095. The pre-school facility in the eastern portion of the Site is excluded from the scope of investigation. The DSI has been prepared in accordance with the scope of works presented in Cardno's proposal dated 29 November 2018.

The Department of Education is proposing to redevelop the Site to increase its current capacity from a K-2 capable school to a K-6 capable school. The purpose of the DSI was to assess soil and groundwater conditions at the Site with regards to potential contamination and Acid Sulfate Soils (ASS) in accordance with Item 12 of the Secretaries Environmental Assessment Requirements for Application Number SSD 9391.

The objective of the DSI was to investigate the potential for soil and groundwater contamination at the site which may pose a risk to human health or the environment under the proposed redevelopment as a primary school.

Summary of Field Investigation

Cardno conducted a field investigation which consisted of advancing 19 test pits, one hand auger and five boreholes across the site. Test pits were advanced a minimum of 0.5 m into natural soils. Boreholes were advanced to depths of up to 17 m within the proposed school building footprint, and depths of 5 m in other areas. Three boreholes were converted into permanent monitoring wells to establish groundwater conditions at the site.

The subsurface profile encountered generally consisted of topsoil and fill material consisting of sands and silty sands to a maximum depth of 1.2 metres below ground level (mBGL), with filling generally observed to be less than 1 m deep. Natural soils encountered generally consisted of sands and silty sands, with intermittent sandy clays present at greater depths. Groundwater was encountered at depths of approximately 3.8 to 4 mBGL.

Summary of Contamination Potential

Based on the site history and results of the intrusive investigation, the potential sources of impacts at the Site included:

- Contamination as a consequence of uncontrolled fill material;
- Contamination as a consequence of demolition of buildings containing hazardous building materials and soil impacts as a consequence of residual demolition waste
- Presence of soil contamination as a consequence of historical spills and leaks

Summary of Results, CSM and Risk Assessment

Groundwater

Cardno installed and sampled three monitoring wells across the Site as part of the intrusive investigation. Concentrations of COPCs within groundwater were generally below the adopted assessment criteria with the exception of copper within MW02. Given that concentrations of copper within site soils were within acceptable criteria, and the urbanized nature of the site and surrounds, the concentrations are likely to be a function of regional groundwater quality rather than a site specific source. The potential risks from groundwater at the Site are considered low and acceptable.

Asbestos in Soils

ACM in the form of fibre cement debris was identified at the soil surface in two locations, beneath turf at TP03, and within shallow fill material at TP04, exceeding the adopted Health Screening Levels (HSLs) and NEPM guidance for continued use as a primary school. The potential area of impact is located in the eastern section of the Site, adjacent to the pre-school boundary fence. The fill material encountered within the area consists of sand and silty sand, with variable depths of between 0.3 and 1.2 mBGL.

Under the current site use, the risk posed to receptors by the soils is considered low. This is due to:

- The material encountered being bonded fibre cement material in fair condition;
- That no further material was encountered at the soil surface; and

- That control air monitoring during disturbance of the soils indicate airborne concentrations were below the exposure standard.

During the proposed development, disturbance of the soils poses a potential low inhalation risk to construction and maintenance workers, site users, and off-site receptors. An Asbestos Management Plan (AMP) should be developed to manage potential risks during construction.

Under the proposed site use, the soils will require remediation, management or risk assessment in order to render the site suitable. Options for remediation or management include consolidation of the material on-site beneath a suitable capping layer or hardstand, or removal from site and disposal at a suitably licenced landfill. If retention of the material on site is preferred, a Long Term Environmental Management Plan (LTEMP) shall be required.

It is Cardno's opinion that the identified impacts can be managed and remedied during development in order to render the site suitable.

Nickel and TRH C_{16}-C_{34}

Concentrations of nickel were detected above the Tier I Site Specific Ecological Investigation Level (EIL) in shallow soils at two locations (TP06_0.1 and TP13_0.1), in addition, hydrocarbon fractions C_{16}-C_{34} were detected at concentrations above the adopted Ecological Screening Level (ESL) in BH04_0.4 for continued use as a primary school.

During development the area characterised by TP06 and TP13 is proposed to be beneath the school building, expanded carpark, or landscaped. The landscaping of the area is indicated to involve removal of surface soils and import of topsoil. The proposed works are likely to remove the nickel containing soils, or mitigate their contact with on-site vegetation. As such, the potential risk posed by the soils to sensitive receptors is considered low.

During development, the area characterised by TRH impacts identified at sample location BH04 is intended to remain as a hardstand area, with installation of subsurface water tanks and concrete slabs. The presence of hardstand is considered to effectively mitigate any potential exposure of ecological receptors to the soils containing hydrocarbons above the adopted screening criteria. As such, the potential risk posed by the soils is considered low.

It is Cardno's opinion that under the proposed development the identified impacts do not pose an unacceptable risk to environmental receptors, and any receptor pathways are likely to be mitigated during the planned redevelopment.

Potential Acid Sulfate Soils

Potential Acid Sulfate Soils (PASS) have been identified at depths of 7 mBGL and greater, associated with natural sands and clays. If these soils are to be disturbed and allowed to oxidise, the potential acid generation poses an environmental risk to ecological receptors such as on-site vegetation and off-site receptors via groundwater. The acid generated also has the potential to degrade structures installed. An Acid Sulfate Soils Management Plan (ASSMP) should be developed to manage the disturbance of these soils by activities such as excavation and piling, or by lowering of the water table.

Recommendations

To manage the potential risks at the Site and validate the suitability of the Site for the continued land use, some remediation, management or risk assessment of the site will be required. Based on the information above, Cardno provides the following recommendations:

- Develop a Remediation Action Plan (RAP) to evaluate the potential management, remediation and / or risk assessment options, detail additional soil sampling rates for data gap investigation, waste classification / re-use requirements and validation criteria to guide and inform the development works. Potential applicable remedial strategies that should be considered include but are not limited to:
  - Site specific human health and ecological risk assessment;
  - Excavation and off-site disposal of impacted soil;
  - Capping with material suitable for the development and future areas of vegetation (potentially 500 mm of clean soil or a suitable depth of hardstand);
- The RAP should also include:

- An Unexpected Finds Protocol to manage any risks of unidentified impacts such as hazardous materials or waste in fill material;
- Sampling requirements to classify soil if off-site disposal of soils is required. A suitably qualified Environmental Consultant should be engaged a to undertake sampling at densities in accordance with the NSW EPA *Sampling Design Guidelines* (1995) and/or the NSW EPA *Excavated Natural Material Order* (2014) in order to issue a Waste Classification for the material;
- If re-use of excavated soils on-site is proposed, validation sampling at a rate consistent with NEPM and / or ENM Order guidance should be undertaken to ensure the soils are suitable for the proposed land-use. The sampling density would be included in the RAP.

> If not incorporated into the RAP, additional management plans should be developed including:

- An Acid Sulfate Soils Management Plan (ASSMP) detailing the procedure for disturbance of PASS material, and the process for treatment and validation of neutralisation;
- An Asbestos Management Plan (AMP) detailing the procedure for disturbance of ACM containing soils including control measures and WHS requirements.

1 Introduction

1.1 Background

Cardno (NSW/ACT) Pty Ltd ("Cardno") was engaged by DWP Australia Pty Ltd ("the Client") to undertake a Detailed Site Investigation (DSI) for the proposed redevelopment of Kyeemagh Infants School, located on the corner of Jacobson Avenue and Beehag Street, Kyeemagh NSW 2216 ("the Site"). The Site is legally identified as Part Lot 1 within Deposited Plan (DP) 335734 and Lot 1 within DP 120095. The pre-school facility in the eastern portion of the Site is excluded from the scope of investigation. The location and features of the site are presented in **Figures 1** and **2** in **Appendix A.** The DSI has been prepared in accordance with the scope of works presented in Cardno's proposal dated 29 November 2018.

The Department of Education is proposing to redevelop the Site to increase its current capacity from a K-2 capable school to a K-6 capable school. The proposed redevelopment has been assessed as State Significant Development and this DSI has been commissioned to satisfy Item 12.1 of the Secretary's Environmental Assessment Requirements (SEARS) for Application Number SSD 9391, issued under Section 4.12(8) of the *Environmental Planning and Assessment Act* and Schedule 2 of the *Environmental Planning and Assessment Regulation 2000.* The requirements of Item 12 are to assess and quantify any soil and groundwater contamination and demonstrate that the Site is suitable for the proposed use in accordance with *State Environmental Planning Policy No. 55 – Remediation of Land 1998*.

1.2 Purpose and Objectives

The purpose of this DSI is to provide the Client with information on subsurface soil and groundwater conditions at the Site with regards to potential contamination and Acid Sulfate Soils (ASS) which may pose a risk to human health or the environment under the proposed development.

The objectives of the DSI are to:

- Identify the potential for past or present activities on the Site; and to the extent practicable surrounding the Site, to cause contamination of land or groundwater at the Site;
- Identify potential areas and contaminants of concern at the Site;
- Develop a Conceptual Site Model (CSM) incorporating identified impacts (if any) and potential receptors of concern to assess the potential for the protected beneficial uses of the land and groundwater to be impacted due to contamination; and
- Provide recommendations for additional assessment and/or management options if impacted soil and/or groundwater is identified.

1.3 Scope

To meet the DSI objectives Cardno undertook the following scope of work:

- Defined the Site features and immediate surrounds based on site observations during the assessment activities;
- Reviewed available background information for the Site, including searches of public databases;
- Undertook an intrusive investigation which included:
  - Locating services in the assessment area;
  - The advancement of 19 test pits, one hand auger, and five soil borings using an excavator and 4x4 vehicle mounted Drill Techniques D-4T drill rig;
  - Submission of 41 primary soil samples, 37 samples for Acid Sulfate Soils analysis, two fibre cement samples and associated Quality Assurance / Quality Control samples to a NATA accredited laboratory for analysis of:
    - Total Recoverable Hydrocarbons (TRH);
    - Benzene, Toluene, Ethylbenzene, Total Xylenes and Naphthalene (BTEXN);

  - Volatile Organic Compounds (VOCs);
  - Polycyclic Aromatic Hydrocarbons (PAHs);
  - Heavy Metals (Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel and Zinc);
  - Organochlorine and Organophosphate Pesticides;
  - Polychlorinated Biphenyls (PCBs);
  - Acid Sulfate Soils Field Screening (pH_F/pH_{FOX});
  - Suspension Peroxide Oxidation Combined Acidity and Sulphur (SPOCAS);
  - Chromium Reducible Sulphur (S_{CR}); and
  - Asbestos (weight/weight %).
- Submission of three primary groundwater samples and associated Quality Assurance / Quality Control samples to a NATA accredited laboratory for analysis of:
  - Total Recoverable Hydrocarbons (TRH);
  - Benzene, Toluene, Ethylbenzene, Total Xylenes and Naphthalene (BTEXN);
  - Volatile Organic Compounds (VOCs);
  - Polycyclic Aromatic Hydrocarbons (PAHs);
  - Heavy Metals (Arsenic, Cadmium, Chromium, Copper, Lead, Mercury, Nickel and Zinc);
  - 28 per- and poly-fluoroalkyl substances (PFAS)

- Development of a conceptual site model (CSM) to evaluate potential risks to identified sensitive receivers;
- Preparation of this DSI report.

1.4 Guidelines and Legislation

The scope of work outlined above was completed in accordance with the requirements included in the following guidelines and legislation:

- ASSMAC (1998) *Acid Sulfate Soils Assessment Guidelines*, Acid Sulfate Soils Management Advisory Committee, August 1998;
- CCME (2010), *Canadian soil quality guidelines: carcinogenic and other polycyclic aromatic hydrocarbons (PAHs) (environmental and human health effects)*, Scientific criteria document (revised), Canadian Council of Ministers for the Environment ,2010
- CRC Care (2011*) Technical Report No. 10 Health Screening Levels for Petroleum Hydrocarbons in Soil and Groundwater Part 1: Technical Development Document*, September 2011;
- HEPA (2018) *PFAS National Environmental Management Plan*, January 2018;
- NEPC (2013) *National Environment Protection (Assessment of Site Contamination) Measure (NEPM)*. National Environment Protection Council (NEPC) 1999, Amendment 2013;
- NEPC (2013) *Schedule B(2) Guideline on Site Characterisation*, NEPM 1999, Amendment 2013;
- NSW Department of Urban Affairs and Planning (1998) *Managing Land Contamination: Planning Guidelines: SEPP 55 Remediation of Land*, 1998;
- NSW EPA (1995) *Contaminated Sites Sampling Design Guidelines*. New South Wales Environment Protection Authority (EPA), September 1995;
- NSW OEH (2011) *Guidelines for Consultants Reporting on Contaminated Sites*. New South Wales Office of Environment a& Heritage (OEH), November 1997, Reprinted September 2000, Reprinted August 2011;
- Standards Australia (2005) *Australian Standard AS 4482.1-2005 – Guide to the investigation and sampling of sites with potentially contaminated soil. Part 1: Non-volatile and semi-volatile compound*s. Standards Australia, Homebush, NSW; and

> Standards Australia (1999) *Australian Standard AS 4482.2-1999 - Guide to the sampling and investigation of potentially contaminated soil. Part 2: Volatile substances*. Standards Australia, Homebush, NSW.

2 Site Condition and Surrounding Environment

2.1 Site Definition

The site is approximately 8 km south west of the Sydney CBD. The site location and site plan are provided in **Appendix A** with site details presented below in **Table 2-1**.

Table 2-1 Site Definition and Details

Item	Details
Site Address	Corner of Jacobson Avenue and Beehag Street, Kyeemagh NSW 2216
Approximate Site Area (ha)	1.3 ha
Title Details	Lot 1 DP 335734 and Lot 1 DP 120095
Local Government Area	Bayside City Council
Parish and County	St George, Cumberland
Current Site Owners	The Department of Education
Current Site Zoning	R2 Low Density Residential

2.2 Site Description

The Site is currently used as an infant's school and has an area of approximately 1.3 ha. The land parcel is approximately rectangular in shape and is bounded by Jacobson Avenue to the South, Beehag Street to the west, and Tancred Avenue to the east. The northern boundary abuts low density residential housing. The western area of the Site contains the infant's school with classrooms, administrative buildings, amenities and recreation spaces. The centre of the site is primarily an open grassed play area. In the eastern area of the Site North Brighton Preschool occupies an approximately 1,700 m^2 area, which is excluded from the scope of investigation. Figures detailing the Site location and surrounds, and plans for the proposed development are included in **Appendix A**.

Cardno conducted a site inspection on 10 November 2018 during field works. Details of the observations made during the inspection are provided in **Table 2-2** below.

Table 2-2 Site Inspection Observations

Item	Observations
Current site use	Current site use is as an infants school
Proposed site use	Future site use is for redevelopment to remain as a primary school
Site slope and drainage features	Site elevation is approximately 5 mAHD and is relatively level. Local topography is generally level with minor undulations and mounds. Drainage in surrounding streets is expected to be through a pit and pipe network via street guttering.
Vicinity Surface water bodies	The Cooks River is located approximately 240 m east north east of the Site, Botany Bay is located approximately 240 m south east of the Site, and Muddy Creek is located approximately 330 m north west of the Site. Muddy Creek drains into the Cooks River, which flows to Botany Bay.
Site surface coverings	The Site is mostly grassed, with areas of asphalt hardstand in play areas in the south western area of the Site. A graveled carpark is present in the north western corner of the Site accessed via Beehag Street.
Surface soils	Surface soils were visible in areas of sparse grass cover and consisted of sands and silty sands.
Buildings	Eight buildings are present in the western area of the Site which comprise the infants school facilities. Buildings include; ▪ A demountable office and classroom building in the north adjacent the carpark ▪ A metal building housing the Sustainable Community Hub adjacent garden beds south of the office

	▪ A brick library building south west of the office ▪ A brick amenities building south of the office ▪ A clad classroom south of the Beehag Street entrance ▪ Two clad classroom buildings and a clad storage building adjacent the Jacobson Avenue boundary The preschool facility contains additional buildings which are not included within the investigation area.
Potential asbestos in building materials	Potential asbestos containing materials were observed in some buildings generally consisting of wall cladding to the buildings in the south adjacent to Jacobson Avenue.
Manufacturing, industrial or chemical processes and infrastructure	None observed.
Fuel storage tanks (USTs/ASTs)	None observed.
Dangerous goods	None observed.
Solid waste deposition	None observed.
Liquid waste disposal features	None observed.
Evidence of previous site contamination investigations	None observed.
Evidence of land contamination (staining or odours)	Fibre cement material was observed at the soil surface adjacent the access gate in the north eastern corner of the site (**Figure 3, Appendix A**).
Evidence of groundwater contamination	None observed.
Groundwater use	A functioning groundwater bore is present on site reportedly used for irrigation.
Vegetation	Mature trees are present primarily in the western infant's school area, and eastern pre-school area. The remainder of the Site is generally grassed or hardstand. Although grass cover was sparse in some areas, vegetation was generally observed to be healthy. Vegetation is mapped as Urban Exotic / Native (Native Vegetation of the Sydney Metropolitan Area, OEH)
Site fencing	The site is enclosed by a metal security fence on the eastern, western and southern boundaries, and a timber fence on the northern boundary.

2.3 Surrounding Land Uses

Land uses surrounding the site are detailed in **Table 2-3** and a map of the surrounds in shown in **Figure 1**, **Appendix A**.

Table 2-3 Surrounding Land Uses

Direction	Land Use or Activity
North	Low density residential followed by Mutch Avenue, Kyeemagh RSL Club and Muddy Creek
South	Jacobson Avenue followed by low density residential, General Holmes Drive and Botany Bay
East	Tancred Avenue followed by low density residential and the Cooks River, followed by Sydney Airport
West	Beehag Street followed by low density residential

The area is serviced by public roads and access to the site is available from Beehag Street to the west, and via a locked access way at the north eastern corner of the Site leading to Tancred Avenue.

2.4 Proposed Development

The proposed redevelopment aims to address demographic pressures identified in the Kogarah Primary Cluster by expanding the capacity of the school from a K-2 Infants School to K-6 primary school. The proposed school will have a capacity of up to 500 students. The redevelopment involves the demolition of all existing buildings in a staged process to allow the existing school to remain open. The concept design for the proposed development is included in **Appendix A**. New infrastructure includes;

- A main two storey building in the eastern area of the Site adjacent to the pre-school boundary, comprising the majority of the current grassed open area;
- An administration building in the central southern area of the Site;
- Hardstand and a hall building in the south west corner of the Site;
- A games court and refurbished carpark in the north western area of the Site; and
- Landscaping of the remainder of the Site.

2.5 Topography and Drainage

Site elevation is approximately 3 to 5 mAHD and is relatively level with a raised mound south of the Sustainable Community Hub. The local topography is generally flat with minor undulations and mounding. Surface water is expected to generally infiltrate into the sandy soils. Drainage in surrounding streets is by kerbside guttering. Likely stormwater discharge points are the Cooks River and Botany Bay.

2.6 Flood Potential

Cardno undertook a review of available flood mapping of the area surrounding the school in order to provide flooding advice (Cardno, 2018). The Cooks River Flood Study undertaken by Parsons Brinckerhoff for Sydney Water in 2008 indicates that the Site is unlikely to be affected by the 1% AEP or PMP flood events.

2.7 Regional Geology and Hydrogeology

The Soil Landscapes of Sydney Sydney 1:100,000 sheet indicates that the Site soils are likely comprised of Quaternary quartz sands with minor shell content, silt and fine sands (Qhbr). The NSW Office of Environment and Heritage eSPADE online GIS tool indicates that the site is characterised as part of the Tuggerah Soil Landscape, which is an Aeolian landscape with deep sandy soils with pH values ranging from 4.5 (strongly acidic) to 7.0 (neutral).

The site is underlain by the Botany Sands Aquifer which is extensive, porous and highly productive. Groundwater flow is expected to be to the east towards the Cooks River or south towards Botany Bay with local variations in gradient. Due to the proximity of the Site to Muddy Creek, the Cooks River and Botany Bay, groundwater at the Site may be tidally influenced.

2.7.1 Groundwater Database

A search of the NSW Groundwater Database maintained by the Department of Primary industries – Water identified 88 bores within 500m of the site. The purpose of these bores are summarised in **Table 2-4** below.

There are reportedly two bores on-site, with one currently in use:

- GW023455: Private spear for general domestic use installed 01/12/1965. Drilled depth of 4.9mBGL (unlikely to be currently in use)
- GW109028: School bore for high security domestic recreation use installed on 02/12/2002. Drilled depth 8.0 mBGL. Static Water Level 6.0 mBGL (currently in use).
- Static water levels (SWLs) in nearby bores were measured at between 2.44 mBGL and 5.49 mBGL

Table 2-4 Groundwater Summary Table

Intended Purpose	Number of Bores within 500 m
Domestic	81
Irrigation	6
Recreation	1

The majority of groundwater extraction in the surrounding area is for domestic use, likely for garden irrigation.

2.7.2 Acid Sulphate Soils

The Rockdale Local Environment Plan 2011 lists the Site as within a Class 4 Acid Sulfate Soils (ASS) potential area, with a Class 3 area present to the north. There is potential for ASS to be present beneath the Site, and works below 2 m below ground level (mBGL), or which may lower the water table by 2m may pose an environmental risk. As part of this DSI, an investigation into ASS beneath the Site has been undertaken. Some

potential indicators of ASS were identified during fieldworks (odour, shell inclusions), and analytical results confirm that Potential Acid Sulfate Soils (PASS) is present at the Site within sands and clays beneath the water table at depths of 7 mBGL and greater. An Acid Sulfate Soils Management Plan (ASSMP) should be developed for the project to manage any disturbance of ASS during works.

2.7.3 Salinity

There is no data on the Salinity Hazard Map generated using the NSW planning Portal, therefore the potential occurrence of saline soil conditions at the Site is considered to be low.

2.8 Previous Reports

Cardno was provided with the following previous reports relating to the Site:

- Parsons Brinckerhoff (PB, 2014a) *Asbestos Remediation Clearance Certificate*. Prepared 9 July 2014.
- Parsons Brinckerhoff (PB, 2014b) *Asbestos in Grounds, Asbestos Management Plan, Kyeemagh Infants School, Kyeemagh, NSW*. Prepared July 2014.

2.8.1 PB 2014a Asbestos Remediation Clearance Certificate

An Asbestos Remediation Clearance Certificate was issued by Parsons Brinckerhoff (PB) following removal of fragments of asbestos cement debris. The report states that on 9 July 2014 Australasian Technical Services Pty Ltd were engaged to remove asbestos cement debris from ground surfaces within a section of the school's grassy play area. The subject area of the report was in the south eastern corner of the Site abutting the preschool boundary fence and Jacobson Avenue boundary fence. Following removal works, the report states that visible materials were removed as far as reasonably practicable. The report excludes all other areas and areas below ground surfaces. Control air monitoring during the works was found to be within acceptable airborne fibre limits. A copy of the report is included within **Appendix C**.

2.8.2 PB 2014b Asbestos in Grounds, Asbestos Management Plan, Kyeemagh Infants School, Kyeemagh, NSW

Following the issue of the Asbestos Remediation Clearance Certificate (PB 2014a) an Asbestos Management Plan for *Asbestos In Grounds* was prepared by PB and issued in July 2014. The report outlines management measures for the identified asbestos impacted areas. The report states that the 'asbestos zone' comprises the PB 2014a subject area, and that asbestos cement fragments may be present as a component of buried fill in this area.

The report states that the site can be defined as low risk provided that the identified material remains undisturbed, and control measures such as regular monitoring and removal of fragments, and capping of the area with turf, mulch or hardstand is maintained.

Section 5 of the report provides a maintenance works management framework. Section 5.2 outlines that if the asbestos zone is to be disturbed, a licensed asbestos removal contractor with a friable licence should be engaged and provide appropriate control measures to ensure personnel and other school users are not exposed. Controls include undertaking works out of school hours, and work in progress asbestos air monitoring, analysed by a NATA accredited laboratory. Following works, management measures must be re-instated. A copy of the report is included within **Appendix C**.

2.9 EPA Records Search

2.9.1 Contaminated Land Record of Notices

The Contaminated Land Record of Notices is maintained by the Office of Environment and Heritage (OEH) in accordance with Part 5 of the Contaminated Land Management (CLM) Act 1997 and contains regulatory notices issued by the Environment Protection Authority (EPA) in relation to contaminated sites. The results of a search of the register indicate there are two sites within a 1 km radius of the site which have been notified to the EPA.

Table 2-5 Records of notice within dataset buffer

Site	Address	Activity	Notices	Distance (m)	Direction
Shell Service Station Brighton Le Sands and adjacent land	2 General Holmes Drive, Brighton Le Sands	Service Station	4 former	960 m from Site	South West of Site
Cook Park	General Holmes Drive, Brighton Le Sands	Service Station	6 former	966 m from Site	South of Site

The potential for the notified sites identified to have impact at the Site is considered low due to the distance, and that they are not currently regulated.

2.9.2 PoEO Public Register

The PoEO Public Register under Section 308 of the Protection of the Environment Operations (PoEO) Act 1997 contains Environment Protection Licences (EPLs), applications and notices issued by the EPA. A search for current licences to identify issues of relevance within a 1km radius zone did not return any active licences. A search for former licenced activities now revoked or surrendered returned six listings within the 1km buffer zone. The majority of these listings relate to general licences for application of herbicides, road construction (M5 Motorway) and water-based extractive activities. A summary of the former licences is contained in **Appendix C**.

The potential for the activities listed to have impact on the site is considered low due to the type of activities (herbicide impacts to waterways, road construction, extractive activities). The potential for diffuse effects will be considered if soil or groundwater impacts are identified.

2.9.3 List of Contaminated Sites Notified to the EPA

In response to 2008 amendments to the *Contaminated Land Management Act* (2008) clarifying the Section 60 duty to report contaminated sites, the EPA has received approximately 1,600 notifications to date from owners or occupiers of sites where they believe the sites are contaminated. Sites appearing on this list indicate that the notifiers consider that the sites are contaminated and warrant reporting to the NSW EPA; however, the contamination may or may not be significant enough to warrant regulation by the NSW EPA. The EPA needs to review and, if necessary, obtain more information before it can make a determination as to whether the sites warrant regulation.

A search of the list of NSW Contaminated Sites identified 2 notified sites within a the 1km radius, listed in the Record of Notices. The results of the search are presented in **Table 2-6** below.

Table 2-6 Records from the NSW EPA Contaminated Land list within buffer zone.

Site	Address	Activity	Management Class	Distance (m)	Direction
Shell Service Station Brighton Le Sands and adjacent land	2 General Holmes Drive, Brighton Le Sands	Service Station	Contamination formerly regulated under the CLM act	960 m from Site	South West of Site
Cook Park	General Holmes Drive, Brighton Le Sands	Service Station	Contamination formerly regulated under the CLM act	966 m from Site	South of Site

The potential for the notified sites identified to have impact at the Site is considered low due to the distance, and that contamination has been addressed.

2.9.4 Underground Petroleum Storage Systems (UPSS)

A search of the UPSS Sensitive Zone dataset maintained by the NSW EPA indicates that the Site is considered to be within a UPSS Sensitive Zone. No evidence of a UPSS was identified at the Site. Results of the search are contained within **Appendix C**.

2.9.5 EPA PFAS Investigation Program

A search of the NSW EPA PFAS Investigation Program dataset indicates that the Site is within 240 m of an EPA PFAS Investigation Program site, being Botany Bay and Georges River. Results of the search are contained within **Appendix C**.

2.10 SafeWork Dangerous Goods

A search of the SafeWork NSW records for the Storage of Schedule 11 Hazardous Chemicals was undertaken for the Site. The results of the search indicate that SafeWork NSW does not hold any records for the Storage of Hazardous Chemicals at the Site. A copy of the response is provided in **Appendix C**.

2.11 Planning Information

The site is zoned as R2 Low Density Residential under the Rockdale LEP 2011.

2.12 Site Historical Uses

Historical Site uses and surrounding land uses observed from historical aerial photographs contained in **Appendix C** are summarised in **Table 2-7** below. Additionally, an article in the St George and Sutherland Shire Leader published in on August 14, 2017 titled '*Kyeemagh Infants School Turns 75*' reports that the school celebrated 75 years of operation in 2017, indicating the Site has been in use as a school since 1942.

A search of historical business directory records for the area surrounding the Site did not identify any listings of concern within proximity to the Site.

Table 2-7 Historical Land Uses

Decade	Site Use	General Surrounding Land Use
1930-1943	▪ An open undeveloped area, potentially grassed	▪ North: Open undeveloped area, potentially paddocks. ▪ South: Open undeveloped area, followed by a road. ▪ East: A road is present east of the Site, followed by an Open undeveloped area.
1943-1951	▪ A building is present in the south western corner of the site, and a smaller shed immediately north. ▪ The remainder of the site appears sparsely grassed / vegetated with some tracks. ▪ The western half of the site appears to be fenced.	▪ North: Open area with some land disturbance / potential farming followed by a road. A house and sheds are present in the far north. ▪ West: Low density residential housing immediately west and market gardens to the north-west. ▪ East: low density residential housing. The current road structure surrounding the Site is in place. ▪ South: low density residential housing and roads.
1951-1955	▪ The Site remains generally unchanged	▪ Surroundings remain generally unchanged
1955-1961	▪ The site has been cleared and additional small buildings are present in the south western corner. A building is now present abutting the centre of the northern site boundary.	▪ As above for south, east and west. ▪ North: The property abutting the northern site boundary has been developed, and appears to be paddocks or sporting greens.
1961-1965	▪ A building is present in the eastern area of the Site in the location of the current pre-school. ▪ Potential car parking is present along the northern site boundary.	▪ As above for south, east and west. ▪ North: the property abutting the northern site has been further developed with a large building present at the corner of Beehag Street and Mutch Avenue.
1965-1982	▪ The site remains relatively unchanged. Hardstand areas are visible between the buildings in the southern corner of the site. ▪ Some established trees are present.	▪ As above for south, east and west. ▪ The reserve adjacent the Cooks River to the north has been developed with a boat ramp.

	▪ The pre-school area is fenced as a separate area.	
1982-1991	▪ The Site remains relatively unchanged. A small building is present similar to the current storage shed. One small building has also been removed.	▪ As above
1991-2009	▪ An additional building is present adjacent the Beehag Street boundary ▪ The building adjacent the northern site boundary has been removed	▪ As above for south, east, west. ▪ The former sporting / recreation facility abutting the northern boundary has been removed and redeveloped into low density housing
2009-present	▪ The demountable office building is now present. The school and site layout resembles the current configuration with the addition of a shaded play area in the centre of the site. ▪ The Sustainable Community Hub was installed in 2017.	▪ As above for north, east, west. ▪ Development of the reserve / Botany foreshore to the south.

3 Data Quality Objectives

3.1 Data Quality Objectives

The NSW EPA (2017) Guidelines for the NSW Site Auditor Scheme (3rd Edition), which is endorsed under s105 of the Contaminated Land Management Act 1997, requires that Data Quality Objectives (DQOs) be prepared for all assessment and remediation programs. The DQO process as adopted by the NSW EPA is described within US EPA (2000) Guidance for the Data Quality Objectives Process and Data Quality Objectives Process for Hazardous Waste Site Investigations.

The DQOs for the site investigation, as detailed within NSW EPA (2006), are summarised in Error! Reference source not found..

Table 3-1 Data Quality Objectives

DQO Step	Description
Step 1 State the Problem	The site is proposed for redevelopment and it is necessary to establish the current soil and groundwater quality at the site. Investigation into soils and groundwater with respect to potential risks to human health and the environment is required to determine if the Site is suitable for the proposed land use. Therefore, 1. A DSI is required to assess the quality of site soils and groundwater, and to assess the potential risks posed to on and off-site receptors under the proposed land use. 2. If subsurface impacts are identified, appropriate remedial measures to make the site suitable cannot be identified until a DSI is completed.
Step 2 Identify the Decisions	The decisions that must be made are: 1. Are site soils suitable for the intended land use/s? 2. What is the risk posed to potential on-site (and off-site) receptors from the concentrations of COPCs identified at the site (if any)? 3. Is remediation or management of site soils necessary to ensure the site is made suitable for the intended land use?
Step 3 Identify Inputs to the Decision	The primary inputs to the decisions described above are: 1. Assessment of soils, with samples collected from a minimum of 23 locations advanced across the site; 2. Assessment of groundwater, with samples collected from three monitoring wells on site; 3. Ensuring a sufficient number of samples are collected, in accordance with regulatory guidelines, to characterise site soils and groundwater; 4. Laboratory analysis of soil and groundwater samples for relevant COPCs, based on historical land use; 5. Assessment of the analytical results against applicable guideline criteria, based on the intended land use/s; 6. Assessment of the suitability of the analytical data obtained, against the Data Quality Indicators (DQIs) outlined below; 7. Aesthetic observations of soils, including odours, staining and waste inclusions; and 8. Aesthetic observations of groundwater, including odours, sheen and light non aqueous phase liquids (LNAPL), if encountered.
Step 4 Define the Study Boundaries	The study site is defined as Kyeemagh Infants School, being parts of Lot 1 DP 335734 and Lot 1 DP 120095. The lateral extent of the study is shown in **Figure 2**, and excludes the New Brighton Preschool. The vertical extent of the soil study extends to the maximum depth encountered as part of this investigation, being 16 mBGL for ASS investigation. The temporal extent of the study is limited to the sampling conducted in 2018.
Step 5 Develop a Decision Rule	The decision rules for the DSI include: ▪ The number of soil sampling points will meet the requirements for a targeted site characterisation outlined in NSW EPA (1995) Sampling Design Guidelines;

DQO Step	Description
	▪ The number of groundwater samples will be sufficient for site characterization; ▪ Primary, duplicate and triplicate soil and groundwater samples will be analysed at National Association of Testing Authorities, Australia (NATA) accredited laboratories; ▪ Field and laboratory QA/QC results will indicate reliability and representativeness of the data set; ▪ Laboratory Limits of Reporting (LORs) will be below the applicable guideline criteria for the analysed COPC, where possible; ▪ Applicable guideline criteria will be sourced from NEPM (2013) guidelines and other NSW EPA endorsed guidelines (as necessary); ▪ Any soil aesthetic issues will be evaluated including areas of discolouration, odour and hazardous waste inclusions; ▪ Any groundwater aesthetic issues will be evaluated including odours, sheen and LNAPL; ▪ If soil COPCs exceed the applicable guideline criteria, the site will be deemed to potentially contain 'hot spots' of contamination; ▪ If the concentration of a soil and groundwater COPC in a sample is below the applicable guideline criteria, then no further assessment/remediation will be required with respect to that COPC; ▪ If the 95% upper confidence limit (UCL) of a soil COPC is less than applicable guideline criteria, standard deviation is less than 50%, and no reported concentration is greater than 250% of criteria, then no further assessment/remediation will be required with respect to that COPC; and ▪ If the concentration of a soil or groundwater COPC in a sample exceeds the applicable guideline criteria, the additional works (e.g. remediation or quantitative risk assessment) may be required to minimise the risk.
Step 6 Specify Limits on Decision Errors	To ensure the results obtained are reproducible and accurate, a QA/QC plan is incorporated into the sampling and analytical program. DQIs are used to assess the reliability of field procedures and analytical results. In particular, the DQIs within NSW DEC (2006) are used to document and quantify compliance. DQIs are described as follows, and are presented in **Table 3-2** below: 1. Completeness – A measure of the amount of useable data from a data collection activity; 2. Comparability – The confidence (expressed qualitatively) that data may be considered to be equivalent for each sampling and analytical event; 3. Representativeness – The confidence (expressed qualitatively) that data are representative of each media present on the site; 4. Precision – A quantitative measure of the variability (or reproducibility) of data; and 5. Accuracy (bias) – A quantitative measure of the closeness of reported data to the true value. In addition, this step should include the following considerations to quantify tolerable limits: ▪ If 95% upper confidence limits (UCLs) are adopted for a particular soil COPC, a decision can be made based on a 95% probability that the 'true' arithmetic average contaminant concentration within the sampling area will not exceed the value determined by this method. Therefore, the limit on the decision error will be that there is a 5% probability that the calculated arithmetic average contaminant concentration may be incorrect; and ▪ If the minimum soil sampling points required for site characterisation based on detected circular hot spots by using a systematic sampling pattern is adopted (Table A of NSW EPA 1995), a decision can be made based on a 95% confidence of detecting a hot spot of a particular diameter. Therefore, the limit on the decision error will be that there is a 5% probability that a hotspot of a particular diameter may not be detected.
Step 7 Optimise the Design for Obtaining Data	To achieve the DQOs and DQIs, the following sampling procedures will be implemented to optimise the design for obtaining data 1. The number of soil sampling points will meet the requirements required for a targeted site characterisation outlined in Table A of NSW EPA (1995) *Sampling Design Guidelines* 2. Fill and natural soil samples will be collected from a minimum of 23 locations advanced at the site 3. Soil COPCs will be selected based on a review of historical activities at the site 4. Samples were be collected by suitably qualified and experienced environmental consultants 5. Soil samples will be collected and preserved in accordance with relevant standards/guidelines

DQO Step	Description
	6. NATA accredited laboratories will be engaged for analysis of samples 7. Soil observations including odours, staining and PID readings will assist with selection of samples for laboratory analysis 8. Field and laboratory QA/QC procedures will be adopted and reviewed to indicate the reliability of the results obtained.

3.2 Data Quality Indicators

The following Data Quality Indicators (DQIs), referenced in Step 6 in **Table 3-1** have been adopted in accordance with the NSW EPA (2017) Guidelines for the NSW Site Auditor Scheme (3rd Edition). The DQIs outlined in **Table 3-2** assist with decisions regarding the contamination status of the site, including the quality of the laboratory data obtained.

Table 3-2 Data Quality Indicators

DQI	Frequency	Data Acceptance Criteria
Completeness		
Field documentation correct	All samples	All samples
Soil bore logs complete and correct	All samples	All samples
Suitably qualified and experience sampler	All samples	All samples
Appropriate lab methods and limits of reporting (LORs)	All samples	All samples
Chain of custodies (COCs) completed appropriately	All samples	All samples
Sample holding times complied with	All samples	All samples
Proposed/critical locations sampled	-	Proposed/critical locations sampled
Comparability		
Consistent standard operating procedures for collection of each sample. Samples should be collected, preserved and handled in a consistent manner	All samples	All samples
Experienced sampler	All samples	All samples
Climatic conditions (temp, rain etc) recorded and influence on samples quantified (if required)	All samples	All samples
Consistent analytical methods, laboratories and units	All samples	All samples
Representativeness		
Sampling appropriate for media and analytes (appropriate collection, handling and storage)	All samples	All Samples
Samples homogenous	All samples	All Samples
Detection of laboratory artefacts, e.g. contamination blanks	-	Laboratory artefacts detected and assessed
Samples extracted and analysed within holding times	All samples	-
Precision		
Blind duplicates (intra-laboratory duplicates)	1 per 20 samples	30% RPD, then review RPDs >30% would be reviewed in relation to heterogeneity of sample and LOR
Split duplicates (inter-laboratory duplicates)	1 per 20 samples	30% RPD, then review

DQI	Frequency	Data Acceptance Criteria
		RPDs >30% would be reviewed in relation to heterogeneity of sample and LOR
Laboratory duplicates	1 per 20 samples	<20% RPD Result > 20 × LOR <50% RPD Result 10-20 × LOR No Limit when RPD Result <10 × LOR
Accuracy		
Trip blanks	1 per sampling event (as required)	COPCs<LOR
Trip Spikes	1 per sampling event (as required)	70-130%
Surrogate spikes	All organic samples	50-150%
Matrix spikes	1 per 20 samples	70-130%
Laboratory control samples	1 per 20 samples	70-130%
Method blanks	1 per 20 samples	<LOR

4 Soil Assessment Criteria

4.1 Assessment Criteria

The following sections detail the adopted Tier I Screening Values which are compared to the soil and groundwater analytical data included on the summary data tables included in **Appendix D**. The analytical results obtained have been compared to the assessment criteria below.

4.1.1 Soil Assessment Criteria

Based on the proposed redevelopment as a primary school, the criteria for residential land use with accessible soils (A) have been applied. A review of the borehole logs for the site indicates that values for Sands / Coarse soils are applicable:

Assessment criteria for the Site were derived from the following guidelines:

- Total Recoverable Hydrocarbons (TRH), Benzene, Toluene, Ethylbenzene, Xylene, and Naphthalene (BTEXN), Benzo(a)pyrene:
  - NEPM (2013) Health Screening Levels (HSLs) for Vapour Intrusion (VI) and Direct Contact;
  - CRC Care (2011) Soil HSLs for Intrusive Maintenance Workers (Shallow Trench).
  - NEPM (2013) Ecological Screening Levels (ESLs); and
  - CCME (2010) Soil Quality Guidelines (SQGs)
- Heavy metals M8 (Arsenic, Cadmium, Chromium, Copper, Lead, Nickel, Mercury, Zinc), Polycyclic Aromatic Hydrocarbons (PAHs), Organochlorine Pesticides, Organophosphorus Pesticides, Polychlorinated Biphenyls, Volatile Organic Compounds (VOCs):
  - NEPM (2013) Health Investigation Level (HILs);
  - NEPM (2013) Generic Ecological Investigation Levels (EILs);
  - Site Specific EILs where applicable calculated via the Ecological Investigation Level Calculation Spreadsheet, developed by CSIRO for the National Environment Protection Council, December 2010.
- Asbestos:
  - Quantification % w/w, Presence / Absence.
- Acid Sulfate Soils (ASS):
  - ASSMAC (1998) Action Criteria – Coarse Soils (<1000t)

4.1.2 Groundwater Assessment Criteria

For the purposes of evaluating groundwater conditions at the site, a review of the potential on-site and off-site groundwater beneficial uses have been conducted. The results of the review are provided in **Table 4-1** below.

Table 4-1 Groundwater Beneficial Uses

Beneficial Use		Likelihood of Use		Comment
		Onsite	Offsite	
Aquatic Ecosystems	Groundwater	N/A	Potential	Aquatic ecosystems are not present on-site. There is potential for groundwater to travel to aquatic ecosystems including the Cooks River and Botany Bay.
Human Uses	Potable Water	Unlikely	Unlikely	Groundwater use on-site and surrounding the site is generally for domestic use, likely irrigation. Potable water supply is via reticulated water, and stock watering is unlikely given the surrounding land uses.
	Primary /Secondary Contact Recreation / Aesthetic	Unlikely	Unlikely	
	Irrigation	Likely	Likely	

Beneficial Use		Likelihood of Use		Comment
		Onsite	Offsite	
	Stock Watering	Unlikely	Unlikely	
	Industrial Use	Unlikely	Unlikely	
	Aquaculture	Unlikely	Unlikely	
Buildings and Structures		Refer Comment	Refer Comment	
Intrusive Maintenance / Trench / Excavation Worker		Potential	Potential	Groundwater may be encountered during trenching, excavation and piling works.

Based on a review of the beneficial uses, the groundwater analytical results will be compared to applicable guideline criteria for protection of marine aquatic ecosystems, recreational use, and irrigation due to the on-site use for irrigation and potential flow towards the Cooks River and Botany Bay. As such, the groundwater analytical results will be compared to the following assessment criteria:

- Heavy Metals, Benzene, Xylenes, Naphthalene, VOCs:
  - NEPM1999 Groundwater Investigation Levels (GILs) for marine waters (95%).
  - ANZECC 2000 Australian Water Quality Guidelines for Fresh and Marine Waters: Irrigation Long-Term Trigger Values.
- TRH and BTEX:
  - NEPM Groundwater HSLs for vapour intrusion for low-high density residential land use (HSL A&B). A review of the depth to groundwater and excavation depth at the site indicates that the Sand HSLs at depths between 4 m to 8 m are applicable.
- Per- and poly-fluoroalkyl substances (PFAS)
  - PFAS NEMP (2018) Interim Marine (95%) and Recreational Water.

5 Soil Investigation Program

5.1 Site Investigation Methodology

The scope and method of the work is summarised in **Table 5-1** below. Sampling locations are shown on **Figure 2**, **Appendix A** and collected samples and analysis are summarised in **Table 5-3**. Fieldwork was undertaken by an experienced Cardno environmental scientist and geotechnical engineer in accordance with the agreed scope of work per the procedures in **Table 5-1**, below. Laboratory analytical summary tables are included in **Appendix D** and borehole logs are provided in **Appendix E**.

In accordance with the PB 2014b Asbestos Management Plan, works were undertaken outside of school hours. During disturbance of the 'asbestos zone' adjacent the preschool, a licenced Class A asbestos removalist was engaged (Australasian Technical Services Pty Ltd). Work in progress air monitoring was undertaken by EnviroX Consulting, and a clearance certificate issued for the area disturbed following works. A copy of the clearance certificate is provided in **Appendix C**.

Table 5-1 Investigation Activity Summary

Activity	Details
Dates of Field Activity	08/11/2018, 10/11/2018, 17/11/2018, 23/11/2018
Service Location	Conducted a Dial Before You Dig search and engaged a qualified service locator to mark services and clear borehole locations prior to ground penetration.
Intrusive Works	Non-destructive drilling (hand auger) within high risk zone followed by drilling using a 4x4 vehicle mounted Drill Techniques D-4T drill rig with solid flight augers and wash boring, and test pits using a 5t excavator.
Bores, Test Pits and Target Depths	Fieldworks for soil sampling and monitoring well installation were undertaken on 10 and 17 November 2018: ▪ 19 test pits and one hand auger were advanced across the site into natural soils; ▪ Five boreholes were drilled to varying depths between 5 mBGL and 17.95 mBGL ▪ Three boreholes were converted into permanent groundwater monitoring wells. Well construction details are included in **Appendix E.** ▪ After the monitoring wells were installed they were developed by pumping approximately 80 litres of groundwater from each well.
Soil Logging	Soils encountered during drilling were described and logged. Borehole logs are presented in **Appendix E.**
Soil Sampling	A total of 41 primary soil samples, two fibre cement samples and 37 samples for ASS analysis were submitted for analysis from the 19 test pits, one hand auger and five boreholes advanced across the site excluding QA/QC samples. Samples were collected by gloved hand using nitrile gloves. Samples from test pits were collected from material that had not been in contact with the excavator bucket. Samples from boreholes were collected from the auger return. Samples at depth for ASS screening were collected from the Standard Penetration Test return. Samples for asbestos in soil were based on collecting 500mL of representative soil for each target interval for screening of asbestos content (% weight/weight) Primary soil samples and two intra-laboratory duplicated were analysed by Eurofins mgt for COPCs as per **Table 5-3**. Two triplicate samples were sent to ALS Environmental and analysed for the same COPCs.
Groundwater Sampling	Three primary groundwater samples, one intra-laboratory duplicate and one inter-laboratory triplicate sample were collected from the monitoring wells on 23 November 2018. The groundwater wells were developed as noted above and purged approximately one week later using low flow purging equipment with dedicated tubing. During purging, groundwater quality parameters including pH, dissolved oxygen, electrical conductivity, oxidation-reduction potential, and temperature were recorded. Groundwater was sampled once the water quality parameters stabilised. Groundwater purging logs are included in **Appendix D**.

	The primary groundwater samples and intra-laboratory duplicate was sent to Eurofins mgt for analysis on the contaminants of potential concern (CoPC) as per **Table 5.2**. The triplicate groundwater sample was submitted to ALS for analysis of the same COPCs.
Sample Preservation and Transport	Samples were placed in laboratory supplied containers and stored on ice in an ice box while on Site and in transit to the laboratory under Chain of Custody (CoC) documentation. Samples for ASS screening and analysis were frozen prior to dispatch. CoC documentation is presented in **Appendix F**.
Borehole and Test Pit Re-instatement	Boreholes and test pits for sampling were backfilled with soil removed from the bore during drilling where possible. Where additional backfill was required washed sand was used. Locations in grassed areas were capped with turf removed prior to drilling, or with new turf in the case of TP03.

The coordinates of the soil samples collected during the investigation program are included in **Table 5-2** below. A summary of the soil samples is included in **Table 5-2** below. Tabulated summaries of laboratory results are presented in **Appendix D**. Copies of the NATA stamped laboratory reports and chain of custody documentation are included in **Appendix F**. The Quality Assurance/Quality Control program is discussed in **Appendix G**.

Table 5-2 Soil Sample Locations

Borehole ID	Easting	Northing	RL (m AHD)

5.2 Field Observations

Subsurface conditions observed during the soil sampling program are summarised in **Table 5-4** below. Surface coverings primarily consist of grass, and asphalt in footpaths and hardstand areas. Depth profiles were generally consistent across the Site with some variation in fill depth and profile. Detailed soil descriptions are provided in the borehole logs (**Appendix E**).

Table 5-4 Typical Soil Profile

Subsurface Horizon	Typical Depth Range (mBGL)	Description
Topsoil	0.0 – 0.2	Fine to medium grained Sands and Silty Sands
Fill	0.2 – 0.5	Fine to medium grained Sands, Silty Sands and Gravelly Sands. Sporadic areas of deeper fill observed in TP03 (1.2 mBGL).
Residual Soil	0.5 – >17.0	Fine to medium grained Sands and Silty Sands. Areas of Silty and Sandy Clay observed in deeper boreholes; BH01 (7.38 mBGL), BH02 (8.5 mBGL) and BH03 (8.2 mBGL)
Rock	-	Not encountered during investigation
Groundwater	≈ 3.8 (mBTOC)	Pale Yellow, Low Turbidity

Additional observations for Kyeemagh Infants School include:

- Asbestos Containing Material (ACM) in the form of fibre cement debris in fair condition was observed at the soil surface in two locations abutting the pre-school boundary fence in the east of the Site (ASB1 and ASB2 in **Figure 3, Appendix A**).
- ACM in the form of fibre cement debris in fair condition was observed in two test pits. Debris was observed at TP03 at the soil surface beneath turf, and at TP04 within fill material.

5.3 Laboratory Soil Results

The results of laboratory analysis have been compared against the adopted assessment criteria. Summarised analytical results are presented in **Appendix D**. An interpretation of this data is summarised as follows:

- Field Screen (PID):
  - PID readings ranged from 0.0 ppm to a maximum of 8.3 ppm at TP02_0.4. Values observed were generally low between 0.5 and 5 ppm.
- Benzene, Toluene, Ethylbenzene, and Xylene (BTEX):
  - Concentrations were not detected above the laboratory limits of reporting (LOR) or adopted criteria within the analysed samples.
- Total Recoverable Hydrocarbons (TRH):
  - TRH fractions C_6 to C_{10} and $>C_{10}$-C_{16} were not detected above the laboratory LOR or adopted criteria in any analysed sample.
  - TRH fractions $>C_{16}$ to C_{34} were generally reported below the laboratory LOR and adopted criteria with the exception of the following:

- Concentrations of >C_{16} to C_{34} were detected above the adopted NEPM ESL (300 mg/kg) within samples BH04_0.4 and TP06_0.1. The maximum concentration detected was 1200 mg/kg at BH04_0.4.
- A 95% Upper Confidence Limit (95% UCL) was undertaken for samples less than 2.5 times the ESL (excluding BH04_0.4). The 95% UCL was calculated to be 123.8 mg/kg and a Standard Deviation of 53.5, below the adopted ESL.

– Concentrations of TRH fractions C_{34} to C_{40} were detected at concentrations above the laboratory LOR but below adopted criteria.

> Metals:

– Concentrations were generally reported above the laboratory LORs but below adopted criteria with the exception of the following:

- Concentrations of nickel were detected above the Site Specific EIL (8 mg/kg) in samples TP01_0.2, TP02_0.1, TP02_0.4, TP06_0.1, TP06_0.3 and TP13_0.1. The maximum concentration detected was 130 mg/kg at TP06_0.1;
- A 95% UCL was calculated for sample concentrations less than 2.5 times the EIL (excluding samples TP06_0.1 and TP13_0.1), with a reported result of 6.93 and a Standard Deviation of 3.7, below the adopted EIL.

> Polycyclic Aromatic Hydrocarbons (PAHs):

– Concentrations were detected above the laboratory limits of reporting (LOR) but did not exceed adopted screening criteria.

> Organophosphorus / Organochlorine Pesticides (OCPs/OPPs)

– Concentrations of OCPs were detected above the laboratory LORs but below adopted criteria;

– Concentrations of OPPs were not detected above the laboratory LOR or adopted criteria in any analysed sample.

> Polychlorinated Biphenyls (PCBs):

– Concentrations of PCBs were not detected above the laboratory LOR or adopted criteria in any analysed sample.

> Asbestos:

– Asbestos was generally not detected within analysed samples within the exception of the following:

- Chrysotile asbestos was detected in fibre cement fragments above the adopted NEPM HSL (0.05% w/w) within sample TP04_0.4 with an estimated concentration of 0.19% w/w;
- Chrysotile asbestos was detected within fibre cement samples TP03_ASB1 collected beneath turf, and ASB2 collected at the soil surface.

> Acid Sulfate Soils:

– Field pH (pH_F) results ranged from 4.9 (acidic) to 9.6 (highly alkaline), indicating Actual ASS (AASS) are unlikely to be present;

– Field pH Peroxide (pH_{FOX}) results ranged from 2.3 (highly acidic) to 7.9 (slightly alkaline);

– The results of subsequent SPOCAS and S_{CR} testing revealed Potential Acid Sulfate Soils (PASS) were not likely to be present with the exception of the following:

- Oxidisable Sulfur (as Chromium Reducible Sulfur) exceeded the adopted action criteria (0.03% S) in samples BH01_8.5-8.95, BH01_1.0-10.45, BH01_16.0-16.45, BH02_7.0-7.45, BH02_11.5-11.95, BH03_8.5-8.95, and BH03_10.0-10.45;
- In some cases, Acid Neutralising Capacity (ANC) in excess of the acid generation potential was observed, however samples BH01_16.0-16.45 and BH03_10.0-10.45 returned Net Acidity results above the action criteria of 0.3%S indicating the potential need for treatment if exposed.

- An indicative liming rate of up to 8.8 kg/tonne is likely to be required to neutralise any acid generating capacity within the soils.

Table 5-5 Summary of Soil Exceedances

Analyte	Sample I.D.	Reported Concentration	Adopted Criteria
TRH C_{16}-C_{34}	BH04_0.4	1,200 mg/kg	NEPM ESL: 300 mg/kg
Nickel	TP06_0.1 TP13_0.1	130 mg/kg 30 mg/kg	Site Specific EIL: 8 mg/kg
Asbestos (in soil)	TP04_0.4	0.19% w/w	NEPM HSL: 0.01% w/w
Asbestos (soil surface)	TP03_ASB1 ASB2	Chrysotile asbestos detected within fibre cement fragments	NEPM: Soil surface to be free of asbestos
Potential Acid Sulfate Soils	BH01_8.5-8.95 BH01_10.0-10.45 BH01_16.0-16.45 BH02_7.0-7.45 BH02_11.5-11.95 BH03_8.5-8.95 BH03_10.0-10.45	0.34%S 0.16%S 0.05%S 0.13%S 0.082%S 0.29%S 0.35%S	Oxidisable Sulphur (S_{CR}) / Net Acidity – 0.03% S

5.4 Laboratory Groundwater Results

The results of laboratory analysis have been compared against the adopted assessment criteria and presented in **Appendix D**. An interpretation of this data is summarised as follows:

> TRH:

- Concentrations were not detected above laboratory LOR or the adopted assessment criteria in any analysed sample.

> BTEX:

- Concentrations were not detected above laboratory LOR or the adopted assessment criteria in any analysed sample.

> PAHs:

- Concentrations were not detected above laboratory LOR or the adopted assessment criteria in any analysed sample.

> VOCs:

- Concentrations were not detected above laboratory LOR or the adopted assessment criteria in any analysed sample.

> Metals:

- Concentrations were reported above the laboratory LOR but below adopted criteria with the exception of the following:
  - Concentrations of copper were detected marginally above the NEPM Marine 95% GILs (0.0013 mg/L) in sample MW02 (0.002 mg/L).

> PFAS:

- Concentrations were detected above the laboratory LOR but below the adopted assessment criteria.

Table 5-6 Summary of Groundwater Results Exceeding the Adopted Assessment Criteria

Analyte	Sample ID	Reported Concentration (mg/L)	Reported Concentration (mg/L)
Copper	MW02	0.002 mg/L	NEPM GILs (Marine 95%): 0.0013 mg/L

5.5 Site Hydrology

Table 5-7 Site Hydrology

Component	Description
Depth to Groundwater	SWL was recorded at between 3.8 and 3.9 mBTOC.
LNAPL	None observed
Inferred Flow Direction	East-south east towards Cooks River and Botany Bay with localized gradients in varying directions and potential tidal variation.
Inferred Aquifer Conductivity	High
Water Bearing Unit	Shallow sand aquifer
Potential Groundwater Discharge Zones	The Cooks River (240 m east-north east), Botany Bay (240 m south east)

Table 5-8 Monitoring Well Construction

Monitoring Well ID	Installation Date	Total Depth (mbgl)	Screening Interval (mbgl)	Depth to water (bBTOC)
MW01 (BH05)	10/11/2018	4.72	2.0-5.0	3.87
MW02 (BH02)	17/11/2018	17.32	2.0-5.0	3.98
MW03 (BH01)	10/11/2018	14.47	2.0-5.0	3.85

Table 5-9 Groundwater Purging Parameters

Monitoring Well ID	Dissolved Oxygen (DO) (mg/L)	Electrical conductivity (EC) (µS/cm)	pH	Redox potential (Eh) (mV)	Temp (°C)	Purge volume (L)	Water colour
MW01	0.98	270	7.0	75.3	19.9	8	Light Yellow
MW02*	0.7	331	6.9	-41.2	19.2	10	Light Yellow
MW03	0.56	214	6.5	-127.4	18.9	10	Light Yellow

*Purging parameters are indicative only due to equipment malfunction during purging.

6 Quality Assurance / Quality Control

6.1 Field QA/QC Evaluation

The QA/QC samples collected for the sampling program are summarised in **Table 5-6**. The calculated Relative Percentile Differences between primary and duplicate / triplicate samples, trip blank, spike and rinsate results are presented in **Appendix D**.

Table 6-1 Summary of Field QA/QC Samples

Sample Type	Matrix	Primary Sample	Duplicate I.D.	Triplicate I.D.
Field Duplicate / Triplicate	Soil	TP12_0.2	QA100	QA200
		TP16_0.1	QA300	QA400
Field Duplicate / Triplicate	Water	MW02	QA100	QA200
Trip Blank / Trip Spike	Soil	TB / TS	-	-
Rinsate Sample	Water	KYE_RIN	-	-
Drilling fluid emulsion sample	Water	KYE_GUM	-	-

6.2 Laboratory QA/QC

In accordance with Cardno's Quality Assurance and Quality Control (QA/QC) procedures and AS4482.1 (2005), samples were stored in insulated transport containers containing ice and delivered to the designated laboratories under Chain of Custody documentation following sample collection. Chain of Custody records are included in **Appendix F**. Eurofins MGT and ALS Environmental, the chosen analytical laboratories, undertook internal QA/QC procedures which include the analysis of method blanks, internal duplicate samples, laboratory control samples, matrix spikes and surrogate recovery. Additionally, laboratory QA/QC procedures include sample receipt, logging, storage, preservation and analysis within the method specified holding time.

A review of the laboratory analytical data indicated that:

- Laboratory analysis of samples was undertaken by a NATA accredited laboratory
- The laboratory limits of reporting (LOR) were below the adopted criteria
- Samples were extracted and analysed within holding times
- Analyte percentage recoveries in surrogate samples were within acceptance limits
- Analyte concentrations in laboratory method blanks were generally within acceptance limits
- Relative Percent Differences (RPD) between the laboratory parent samples and duplicate samples were generally within acceptance limits, some outliers exist for results for TRH C_{15}-C_{28}, TRH C_{29}-C_{36}, and C_{16}-C_{34}. These outliers are qualified as being within Eurofins and Cardno's overall acceptance requirements.
- Analyte percentage recoveries in laboratory control samples were within acceptance limits
- Analyte percentage recoveries in laboratory spikes were within acceptance limits.

6.3 Data Useability

The data validation procedure employed in the assessment of the field and laboratory QA/QC data indicated that the reported analytical results are representative of the conditions at the sample locations and that the analytical data can be relied upon for the purpose of these investigative works. It is concluded that overall the quality of the analytical data produced is reliable for the purposes of making decisions regarding site contamination.

7 Indicative Waste Classification

The soils sampled during the investigation were compared to the NSW EPA's *Waste Classification Guidelines* (2014). Analytical summary tables are presented within **Appendix D**. The findings of the indicative waste classification are as follows.

7.1 Area Excluding TP03 and TP04

Fill material and soils encountered from depths of 0.0 mBGL to a maximum depth of 1.0 mBGL, excluding the area surrounding TP03 and TP04 generally meet the requirements for classification as General Solid Waste (non-putrescible). The following should be noted:

- One sample (BH4_0.4) exceeded the Contaminant Threshold 1 (CT1) criteria for benzo(a)pyrene (0.8 mg/kg) with a reported concentration of 0.9 mg/kg. However, a 95% Upper Confidence Limit calculated for the fill unit indicates an overall concentration of 0.53 mg/kg with a Standard Deviation of 0.07, below the CT1 criteria.
- One sample (BH06_0.1) exceeded the CT1 criteria for nickel (40 mg/kg) and chromium (100 mg/kg) with concentrations of 130 mg/kg. A 95% UCL was calculated for the fill unit, with a reported chromium result of 22.9 mg/kg with a Standard Deviation of 19.9, and nickel result of 29.7 mg/kg with a Standard Deviation of 23.1, both below the CT1 criteria.

The UCL calculations are provided in **Appendix D**. During construction, it is recommended that Toxicity Characteristic Leaching Procedure (TCLP) testing is undertaken for nickel and chromium as part of the waste classification exercise to determine the final classification of the material.

7.2 Area Characterised by TP03 and TP04

Fill material encountered from depths of 0.0 mBGL to a maximum depth of 1.2 mBGL surrounding TP03 and TP04 and extending to BH02 generally meet the requirements for classification as Special Waste – Asbestos (mixed with General Solid Waste) due to the presence of asbestos at TP03, TP04 and at the soil surface.

7.3 Natural Soils

Natural soils at depths of 7 mBGL and greater are considered to be classified as PASS, and require management if they are to be disturbed. The soils will require treatment to neutralise any acid generating potential. Following treatment, validation sampling by a suitably qualified Environmental Consultant to confirm the neutralisation process and chemical concentrations will be required to produce a Waste Classification Certificate for the material.

For natural soils above the water table, sampling in accordance with the NSW EPA *Excavated Natural Material Order* (2014) can be considered following removal of identified impacted fill material to determine whether the soils meet the criteria for resource recovery under the NSW EPA *Excavated Natural Material Exemption* (2014).

7.4 Potential for On-Site Re-Use

The soils sampled during the investigation generally meet the requirements for re-use within the Site with specific exceptions and stipulations as described in the following section. General conditions for the re-use of within the Site include:

- The soils should meet aesthetic guidelines for use near surface and not exhibit waste or deleterious inclusions, discolouration or generate odour;
- A management plan should be developed addressing any health and safety issues associated with disturbing soils containing COPCs such as asbestos;
- The soils must meet the geotechnical requirements for the particular use, as stipulated and verified by a qualified Geotechnical Engineer;
- Use of the soils at shallow depths within the root zones of plants is subject to their acceptability as a growth medium; and
- During development, a soil validation sampling program should be undertaken of excavated soils for re-use at sampling densities in keeping with NEPM guidance.

Subject to the above, the following should be considered for re-use of material on-site:

- Soils exceeding Tier I HSLs for asbestos surrounding TP03 and TP04 may require management. This may include placement of the material beneath hardstand or a capping layer which physically separates the material from sensitive receptors. If the material is to be retained on-site, a Long Term Environmental Management Plan (LTEMP) may be required.
- Soils exceeding Tier I EILs / ESLs for nickel and TRH C_{16}-C_{34} may require management if to be re-used on site. This may include placement of the material beneath hardstand or a capping layer which physically separates the material from sensitive receptors. If the material is to be retained on-site, a Long Term Environmental Management Plan (LTEMP) may be required.
- Soils found to be PASS will require treatment to neutralise any acid generating potential, followed by validation sampling by a suitably qualified Environmental Consultant to confirm the neutralisation process and chemical concentrations in order for the material to be considered suitable for re-use on-site.

8 Conceptual Site Model

8.1 Conceptual Site Model

Generally, a conceptual site model (CSM) provides an assessment of the fate and transport of COPCs relative to site specific, subsurface conditions with regard to their potential risk to human health and the environment. The CSM takes into account site specific factors including:

- Source(s) of contamination
- Identification of COPCs associated with past (and present) source(s)
- Vertical, lateral and temporal distribution of COPCs
- Site specific lithological information including soil type(s), depth to groundwater, effective porosity, and groundwater flow velocity and
- Actual or potential receptors considering both current and future land use both for the site and adjacent properties, and any sensitive ecological receptors.

Based on the information sourced in this report, a CSM has been developed and is outlined in **Table 8-1**, below. Additional details are included in the sections that follow as necessary.

Table 8-1 Conceptual Site Model (CSM)

Conceptual Site Model Element	Description
Contamination Sources	Based on the results of investigation undertaken, the sources of subsurface contamination include: ▪ Contamination as a consequence of uncontrolled fill material ▪ Contamination as a consequence of demolition of buildings containing hazardous building materials and soil impacts as a consequence of residual demolition waste ▪ Presence of soil contamination as a consequence of historical spills and leaks
Site Current and Future Use	Current site use is as an infant's school. Future site is as a primary school.
Site Geology	Medium to fine grain marine sand with podsols.
Site Hydrogeology	The Botany Sand Aquifer is present beneath the site. The SWL of groundwater at the Site measured from installed bores is 3.8 to 3.9 mBGL.
COPCs - Soil	The following COPCs have been identified above adopted Tier I screening criteria at the Site: ▪ Concentrations of asbestos have been detected within soils above the adopted NEPM HSL, and fragments have been identified at the soil surface; ▪ Concentrations of nickel have been detected above the adopted Site Specific EIL; ▪ Concentrations of hydrocarbons (TRH C_{16}-C_{34}) have been identified above the adopted NEPM ESL.
Extent of Impacts - Soil	Concentrations of TRH C_{16}-C_{34} were detected above the adopted ESL in shallow soils at BH04. The vertical extent of impact is considered to be the depth of fill material, being 0.5 mBGL. The lateral extent has conservatively been estimated as the distance to the nearest clean location, with an indicative area of 1,500 m^2. Concentrations of nickel were detected in surface soils above the adopted EIL in shallow surface soils. The vertical extent of impact is considered to be the depth of fill, being 0.3 to 0.4 mBGL. The lateral extent has conservatively been estimated as the distance to the nearest clean location, with an indicative area of 1,300 m^2. Concentrations of asbestos in soil exceeding the adopted HSL were detected at TP04 within shallow fill, and at the soil surface at TP03 and south east of BH02. The vertical extent of impact is considered to be the depth of fill, which varies between 0.3 mBGL at BH01 and 1.2 mBGL at TP03. The lateral extent

	of impact has been conservatively estimated as the distance to the nearest clean location, with an indicative area of 2,200 m^2.
COPCs – Groundwater	Copper was detected slightly above the NEPM GILs for marine waters in MW02 (0.002 mg/L).
Extent of Impacts - Groundwater	Given concentrations of copper within Site soils were within acceptable criteria, and the urbanized nature of the site and surrounds, the concentrations are likely to be a function of regional groundwater quality rather than a result of site contamination. Given the distance to the nearest receiving body, and the low levels detected, the potential risks from groundwater at the Site are considered low and acceptable.
Potential Human Receptors	Current and future users of the site, including students, staff, construction and maintenance workers.
Potential Environmental Receptors	On-site vegetation communities, and off-site receptors including aquatic communities in the Cooks River and Botany Bay.

8.2 Conceptual Site Model Summary and Risk Assessment

The following sections summarise the Conceptual Site Model and an evaluation of potential risks to human and environmental receptors. Consideration should be given to any data gaps or uncertainties described in **Section 8.3** below.

8.2.1 Asbestos in Soils

ACM in the form of fibre cement debris was identified at the soil surface in two locations, beneath turf at TP03, and within shallow fill material at TP04. The potential area of impact is located in the eastern section of the Site, adjacent to the pre-school boundary fence. The fill material encountered within the area consists of sand and silty sand, with variable depths of between 0.3 and 1.2 mBGL.

Concentrations of asbestos in soil exceeded the adopted human health screening criteria, indicating a potential human health risk via inhalation pathways and will require some level of remediation, management or risk assessment in order to render the site suitable for the proposed land use.

Under the current site use, potential receptors include students, staff and maintenance workers. Given that the material encountered consisted of fibre cement debris, and that no further surface debris was observed other than material sampled, the current risk to receptors is considered to be low. In addition, control air monitoring undertaken during disturbance of the area indicated airborne concentrations were below the exposure standard.

During the proposed development, disturbance of the soils poses a potential low inhalation risk to construction and maintenance workers, site users, and off-site receptors. An Asbestos Management Plan (AMP) should be developed to manage potential risks during construction.

Under the proposed site use, the soils will require remediation, management or risk assessment in order to render the site suitable. Options for remediation or management include consolidation of the material on-site beneath a suitable capping layer or hardstand, or removal from site and disposal at a suitably licenced landfill. If retention of the material on site is preferred, a Long Term Environmental Management Plan (LTEMP) may be required. Given that the area of impact is generally located within the footprint of the proposed future school building, it is likely that some excavation and disposal of soils will be required.

It is Cardno's opinion that the identified impacts can be managed and remedied during development in order to render the site suitable.

8.2.2 Nickel and TRH C_{16}-C_{34}

Concentrations of nickel were detected above the Tier I Site Specific EIL in shallow soils at two locations (TP06_0.1 and TP13_0.1), in addition, hydrocarbon fractions C_{16}-C_{34} were detected at concentrations above the adopted ESL in BH04_0.4 for continued use as a primary school. Potential ecological receptors include on-site vegetation, and off-site receptors such as the Cooks River and Botany Bay.

The risk to groundwater and off-site receptors is considered low and acceptable due to the relatively immobile nature of the contaminants identified, and that concentrations within groundwater sampled at the Site were below the adopted screening criteria.

During development the area characterised by TP06 and TP13 is proposed to be beneath the school building, expanded carpark, or landscaped. The landscaping of the area is indicated to involve removal of surface soils

and import of topsoil. The proposed works are likely to remove the nickel containing soils, or mitigate their contact with on-site vegetation. As such, the potential risk posed by the soils to sensitive receptors is considered low.

During development, the area characterised by BH04 is intended to remain as a hardstand area, with installation of subsurface water tanks and concrete slabs. The presence of hardstand is considered to effectively mitigate any potential exposure of ecological receptors to the soils containing TRH above the adopted screening criteria. As such, the potential risk posed by the soils is considered low.

If the proposed development plans change and the areas above are intended to be vegetated, consideration should be given to; placing the soils beneath hardstand, at a depth of 2 mBGL or greater, or removal from site.

It is Cardno's opinion that under the proposed development the identified impacts do not pose an unacceptable risk to environmental receptors, and any receptor pathways are likely to be mitigated during the planned redevelopment.

8.2.3 Potential Acid Sulfate Soils

Potential Acid Sulfate Soils (PASS) have been identified at depths of 7 mBGL and greater, associated with natural sands and clays. If these soils are to be disturbed and allowed to oxidise, the potential acid generation poses an environmental risk to ecological receptors such as on-site vegetation and off-site receptors via groundwater. The acid generated also has the potential to degrade structures installed. An Acid Sulfate Soils Management Plan (ASSMP) should be developed to manage the disturbance of these soils by activities such as excavation and piling, or by lowering of the water table.

8.3 Data Gaps and Uncertainties

The results of the soil sampling program conducted at the Site showed that that measurable COPCs are generally absent from the shallow soils except for the areas identified above. Should previously unidentified areas of soil impacts be discovered during future phases of work at the Site, or sensitive receptors identified, additional investigation may be required.

Given the presence of fill on the site, there is likely to be some variability in the quality and type of the fill. Due to the discrete nature of ACM in soil, there is potential for ACM to be present in other areas. An Unexpected Finds Protocol should be employed to manage any previously unidentified areas of potential contamination.

Due to the Site being a functioning school, investigation was not able to undertaken within the building footprint of structures. As such there is some uncertainty as to subsurface conditions beneath buildings. During further phases of work if these soils are to be disturbed, a data gap investigation should be undertaken to ensure any potential risks are characterised.

These data gaps are not considered significant when making overall conclusions about the potential risks at the Site and can be remedied / managed under future phases of the proposed development.

9 Conclusions and Recommendations

9.1 Conclusions

Cardno has completed a Detailed Site Investigation (DSI) and Acid Sulfate Soils Investigation for Kyeemagh Infants School, corner of Jacobson Avenue and Beehag Street, Kyeemagh NSW. The purpose of the DSI was to assess soil and groundwater at the Site with regards to potential contamination and ASS in accordance with Item 12 of the Secretaries Environmental Assessment Requirements for Application Number SSD 9391.

The objective of the DSI was to investigate the potential for soil and groundwater contamination at the site which may pose a risk to human health or the environment under the proposed redevelopment as a primary school.

9.1.1 Summary of Contamination Potential

Based on the site history and results of the intrusive investigation, the potential sources of impacts at the Site included:

- Contamination as a consequence of uncontrolled fill material;
- Contamination as a consequence of demolition of buildings containing hazardous building materials and soil impacts as a consequence of residual demolition waste
- Presence of soil contamination as a consequence of historical spills and leaks

9.1.2 Summary of Results, CSM and Risk Assessment

9.1.2.1 Groundwater

Cardno installed and sampled three monitoring wells across the Site as part of the intrusive investigation. Concentrations of COPCs within groundwater were generally below the adopted assessment criteria with the exception of copper within MW02. Given that concentrations of copper within site soils were within acceptable criteria, and the urbanized nature of the site and surrounds, the concentrations are likely to be a function of regional groundwater quality rather than a site specific source. The potential risks from groundwater at the Site are considered low and acceptable.

9.1.2.2 Asbestos in Soils

ACM in the form of fibre cement debris was identified at the soil surface in two locations, beneath turf at TP03, and within shallow fill material at TP04, exceeding the adopted HSLs for continued use as a primary school. The potential area of impact is located in the eastern section of the Site, adjacent to the pre-school boundary fence. The fill material encountered within the area consists of sand and silty sand, with variable depths of between 0.3 and 1.2 mBGL.

Under the current site use, the risk posed to receptors by the soils is considered low. This is due to:

- The material encountered being bonded fibre cement material in fair condition;
- That no further material was encountered at the soil surface; and
- That control air monitoring during disturbance of the soils indicate airborne concentrations were below the exposure standard.

During the proposed development, disturbance of the soils poses a potential low inhalation risk to construction and maintenance workers, site users, and off-site receptors. An Asbestos Management Plan should be developed to manage potential risks during construction.

Under the proposed site use, the soils will require remediation, management or risk assessment in order to render the site suitable. Options for remediation or management include consolidation of the material on-site beneath a suitable capping layer or hardstand, or removal from site and disposal at a suitably licenced landfill. If retention of the material on site is preferred, a Long Term Environmental Management Plan (LTEMP) may be required.

It is Cardno's opinion that the identified impacts can be managed and remedied during development in order to render the site suitable.

9.1.2.3 *Nickel and TRH C_{16}-C_{34}*

Concentrations of nickel were detected above the Tier I Site Specific EIL in shallow soils at two locations (TP06_0.1 and TP13_0.1), in addition, hydrocarbon fractions C_{16}-C_{34} were detected at concentrations above the adopted ESL in BH04_0.4 for continued use as a primary school.

During development the area characterised by TP06 and TP13 is proposed to be beneath the school building, expanded carpark, or landscaped. The landscaping of the area is indicated to involve removal of surface soils and import of topsoil. The proposed works are likely to remove the nickel containing soils, or mitigate their contact with on-site vegetation. As such, the potential risk posed by the soils to sensitive receptors is considered low.

During development, the area characterised by BH04 is intended to remain as a hardstand area, with installation of subsurface water tanks and concrete slabs. The presence of hardstand is considered to effectively mitigate any potential exposure of ecological receptors to the soils containing TRH above the adopted screening criteria. As such, the potential risk posed by the soils is considered low.

It is Cardno's opinion that under the proposed development the identified impacts do not pose an unacceptable risk to environmental receptors, and any receptor pathways are likely to be mitigated during the planned redevelopment.

9.1.3 Potential Acid Sulfate Soils

Potential Acid Sulfate Soils (PASS) have been identified at depths of 7 mBGL and greater, associated with natural sands and clays. If these soils are to be disturbed and allowed to oxidise, the potential acid generation poses an environmental risk to ecological receptors such as on-site vegetation and off-site receptors via groundwater. The acid generated also has the potential to degrade structures installed. An Acid Sulfate Soils Management Plan (ASSMP) should be developed to manage the disturbance of these soils by activities such as excavation and piling, or by lowering of the water table.

9.2 Recommendations

To manage the potential risks at the Site and validate the suitability of the Site for the continued land use, some remediation, management or risk assessment of the site will be required. Based on the information above, Cardno provides the following recommendations:

- Develop a Remediation Action Plan (RAP) to evaluate the potential management, remediation and / or risk assessment options, detail additional soil sampling rates for data gap investigation, waste classification / re-use requirements and validation criteria to guide and inform the development works. Potential applicable remedial strategies that should be considered include but are not limited to:
  - Site specific human health and ecological risk assessment;
  - Excavation and off-site disposal of impacted soil;
  - Capping with material suitable for the development and future areas of vegetation (potentially 500 mm of clean soil or a suitable depth of hardstand);
- The RAP should also include:
  - An Unexpected Finds Protocol to manage any risks of unidentified impacts such as hazardous materials or waste in fill material;
  - Sampling requirements to classify soil if off-site disposal of soils is required. A suitably qualified Environmental Consultant should be engaged a to undertake sampling at densities in accordance with the NSW EPA *Sampling Design Guidelines* (1995) and/or the NSW EPA *Excavated Natural Material Order* (2014) in order to issue a Waste Classification for the material;
  - If re-use of excavated soils on-site is proposed, validation sampling at a rate consistent with NEPM and / or ENM Order guidance should be undertaken to ensure the soils are suitable for the proposed land-use. The sampling density would be included in the RAP.
- If not incorporated into the RAP, additional management plans should be developed including:
  - An Acid Sulfate Soils Management Plan (ASSMP) detailing the procedure for disturbance of PASS material, and the process for treatment and validation of neutralisation;
  - An Asbestos Management Plan (AMP) detailing the procedure for disturbance of ACM containing soils including control measures and WHS requirements.

11 Limitations

This assessment has been undertaken in general accordance with the current "industry standards" for a DSI for the purpose and objectives and scope identified in this report. These standards are set out in:

- National Environment Protection [Assessment of Site Contamination] Measure (NEPM), December 1999, National Environment Protection Council (NEPC).
- National Environment Protection (Assessment of Site Contamination) Measure (NEPM) 1999 (NEPC, 1999) as varied May 2013 (the 'NEPM').
- AS4482.1- 2005: Guide to the sampling and investigation of potentially contaminated soil Part 1: Nonvolatile and semi-volatile compounds. Standards Australia (2005).

The agreed scope of this assessment has been limited for the current purposes of the Client. The assessment may not identify contamination occurring in all areas of the site, or occurring after sampling was conducted. Subsurface conditions may vary considerably away from the sample locations where information has been obtained.

This Document has been provided by Cardno subject to the following limitations:

- This Document has been prepared for the particular purpose outlined in Cardno's proposal and no responsibility is accepted for the use of this Document, in whole or in part, in other contexts or for any other purpose.
- The scope and the period of Cardno's services are as described in Cardno's proposal, and are subject to restrictions and limitations. Cardno did not perform a complete assessment of all possible conditions or circumstances that may exist at the site referenced in the Document. If a service is not expressly indicated, do not assume it has been provided. If a matter is not addressed, do not assume that any determination has been made by Cardno in regards to it.
- Conditions may exist which were undetectable given the limited nature of the enquiry Cardno was retained to undertake with respect to the site. Variations in conditions may occur between investigatory locations, and there may be special conditions pertaining to the site which have not been revealed by the investigation and which have not therefore been taken into account in the Document. Accordingly, additional studies and actions may be required.
- In addition, it is recognised that the passage of time affects the information and assessment provided in this Document. Cardno's opinions are based upon information that existed at the time of the production of the Document. It is understood that the services provided allowed Cardno to form no more than an opinion of the actual conditions of the site at the time this Document was prepared and cannot be used to assess the effect of any subsequent changes in the quality of the site, or its surroundings, or any laws or regulations.
- Any assessments made in this Document are based on the conditions indicated from published sources and the investigation described. No warranty is included, either express or implied, that the actual conditions will conform exactly to the assessments contained in this Document.
- Where data supplied by the client or other external sources, including previous site investigation data, have been used, it has been assumed that the information is correct unless otherwise stated. No responsibility is accepted by Cardno for incomplete or inaccurate data supplied by others.
- Cardno may have retained sub consultants affiliated with Cardno to provide services for the benefit of Cardno. To the maximum extent allowed by law, the Client acknowledges and agrees it will not have any direct legal recourse to, and waives any claim, demand, or cause of action against, Cardno's affiliated companies, and their employees, officers and directors.

This assessment report is not any of the following:

- A Site Audit Report or Site Audit Statement as defined under the Contaminated Land Management Act, 1997.
- A geotechnical report and the bore logs or test pit logs may not be sufficient as the basis for geotechnical advice.
- A detailed hydrogeological assessment in conformance with NSW DEC (2007) Contaminated Sites: Guidelines for the Assessment and Management of Groundwater Contamination.

1. Introduction

1.1 Document Review

No Activity and/or no Re-occurrence of ACM in grounds on this site since July 2014, as such the following is recommended:

This document is to be reviewed and updated

- when works occur on site
- when works occur on site which may cause grounds disturbance
- when any ACM in grounds is reported
- every second year, if no activity.
- until ten years of inactivity, when document review and update will occur every five years

1.2 Background

In July 2014, asbestos cement fragments were identified in the eastern section of the grassy field to the day care building, at Kyeemagh Infants School, located on the corner of Jacobson Avenue & Beehag St, Kyeemagh NSW 2216.

In order to manage the risk of exposure to asbestos, any fibrous cement fragments are to be removed from the ground surfaces (Refer to Section 1.3). The areas where fibrous cement fragments have been identified within the fill material (and further in-situ asbestos fragments may be present) have been designated as “asbestos zones”.

This report outlines the plan for management of the identified asbestos impacted areas (zones), and should be read in conjunction with the existing Department of Education and Communities (DEC) Asbestos Management Plan for all other identified asbestos materials within the school.

1.3 Asbestos removal/clean-up works

The asbestos removal/ clean up works completed in 2014 comprised:

- the removal, clean-up and disposal of the visible fragments of fibrous cement on the ground surface. Removal was limited to the accessible surface areas only.

The remediated areas are shown in Figure 1.

2. Asbestos materials

2.1 Asbestos zone locations

Asbestos cement fragments may be present as a component of buried fill within the asbestos zone areas. Refer to Figure 1 site plan.

Based on guidelines provided by WorkCover NSW 'Managing Asbestos in and on Soil 2014', as well as DEC's 'Asbestos Management Plan for Schools and Colleges 2014', a licenced asbestos assessor should be engaged to determine whether the asbestos within the Asbestos Zones is considered non-friable or friable.

2.2 Risk management

The in-situ asbestos within the asbestos zones can be classified as low risk provided that the following measures are undertaken:

- The control measures installed are fully maintained.
- The in-situ asbestos remains undisturbed.
- An asbestos management plan remains in effect.
- Any works undertaken on or near the asbestos zones are to be under the control of a permit to work where the contractor has acknowledged the presence of asbestos and has prepared a safe work method statement(s) to ensure that asbestos is not disturbed and therefore airborne asbestos fibres are not generated.

3. Asbestos register (Grounds)

Table 3-1 outlines the findings of the inspection of the grounds indicating the areas requiring management.

Table 3-1 Asbestos Register – Asbestos zones only for Kyeemagh Infants School

Event	Location	Description of Material	Extent	Condition	Risk Status	Control Priority	Control Recommendation/Comments
School Grounds*							
A	Grassy field to day care building, extending from school boundary fence to Jacobson Ave, to large tree to building G.	Possible buried asbestos cement fragments	Throughout – below ground surface	Unknown	Low	Low	The area should be regularly monitored for any fragments and a record kept of how many are found and at what frequency. Fragments should be collected and disposed of as asbestos waste. Consideration should be given to the repair of surface coverage using turf, fake turf, hardstand, or a thick mulch layer as appropriate cover which will prevent heavy foot traffic damage and reduce erosion caused by water runoff.

*Refer to Figure 1 for detail of area locations

Risk assessment factors

Low risk: Asbestos materials that pose a low health risk to personnel, employees and the general public provided they remain undisturbed.

Medium risk: Asbestos materials that pose a moderate risk to people in the area – there is a medium potential for the material to release asbestos fibres, if disturbed.

High risk: Asbestos materials that pose a high health risk to personnel or the public in the area of the material – there is a high potential for the material to release asbestos fibres, if disturbed.

4. Asbestos zone routine management

4.1 Inspections by local staff

In order to monitor the effectiveness of the on-site asbestos zone management, it is essential that the affected areas are regularly inspected. Visual inspections of the asbestos remedial measures should be carried out to ensure that they are maintained adequately. Such inspections should occur on the following occasions:

- at three monthly intervals (e.g. a walkover of remediated areas to ensure that applications of mulch and turf, etc. have been maintained)
- after a period of prolonged heavy rain (e.g. a walkover of remediated areas to ensure that applications of mulch and turf, etc. have not been disturbed by heavy rain)
- whenever damage or disturbance has been reported (e.g. a walkover of remediated areas to ensure that applications of mulch and turf, etc. have not been disturbed by events such as vehicle movements).
- whenever works are about to commence that may cause grounds disturbance

Should areas be identified where encapsulating measures appear to be damaged or are no longer effective, these areas should be re-covered immediately. Some remedial measures such as the installation of layers of mulch and top soil will require ongoing maintenance to ensure that a sufficient barrier layer is in place.

4.2 Maintenance

All remediation measures carried out in the affected areas must be maintained as per their original application. In particular:

- All surface cover/treatments within the asbestos zones must be fully maintained at all times. For example, mulch levels should remain as per their original application, turf should be maintained to ensure full coverage and any other measures should be maintained in a good condition.
- All hard standing surfaces must be maintained and re-instated should any works that disturb them be carried out.
- If any portion of an affected area is found to be damaged (i.e. the surface cover has been damaged so that it has resulted or may result in the soil becoming exposed), the DEC local Asset Management Unit (AMU) should be contacted immediately.

4.3 Checklist

A checklist of site management requirements is presented in Appendix A of this document. This checklist should be used whenever walkover inspections are carried out and where maintenance issues have been raised. The checklist is specific to the requirements of the grounds at the Kyeemagh Infants School and sets out the frequency of inspections required. It is recommended that a hard copy of the check-list retained by the school and field copies are taken on-site when required.

5. Asbestos zone maintenance works management

5.1 General

An Asbestos Management Plan (AMP) has been implemented for all NSW state schools and educational facilities. The plan includes procedures for managing friable asbestos and working on asbestos. A generic permit to work template will also be included in the management plan which will be able to be used where any work is required that may disturb asbestos materials within an asbestos zone.

5.2 Sub-soil areas within school grounds

- Any contractor, maintenance person; all Department of Commerce, Department of Education & Communities personnel or other authorised persons must acknowledge the presence of buried asbestos cement materials within these areas. A copy of the asbestos register must be made available to any such person prior to commencing work.
- Any contractor, maintenance person; all Department of Commerce, Department of Education & Communities or other authorised person who may potentially disturb the soil surface must complete a permit to work or similar form that ensures that any work will not disturb the buried asbestos.
- If work is to be carried out in grounds that will disturb or potentially disturb the buried asbestos, the contractor, maintenance person; all Department of Commerce, Department of Education & Communities personnel or other authorised person must engage a licensed asbestos removal contractor with a friable asbestos licence to undertake the work. The licensed contractor should prepare a safe work method statement detailing procedures that ensure that personnel working in the asbestos zones and any other persons within the school will not be exposed to asbestos fibres. The work area must be completely enclosed and work undertaken out of school hours.
- Work in progress asbestos air monitoring should be carried out during any work that disturbs or could potentially disturb the buried asbestos and/or the soil surface. Air-monitoring should be in accordance with the National Occupational Health & Safety Commission's Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres 2nd Edition [NOHSC: 3003 (2005)] and be conducted by National Association of testing Authorities (NATA) accredited personnel operating from a NATA registered laboratory.
- All asbestos management measures originally installed must be re-instated at the completion of work and prior to the removal of the work area enclosure.

6. Permit for work

Any contractor who proposes to work in any of the asbestos zones where asbestos may be disturbed or the ground surface may be broken must complete a permit to work form.

Before a permit to work is issued, individuals will be required to read and understand the AMP, as well as copies of the relevant asbestos registers. Individuals must be aware of their legal obligations in relation to health and safety as specified in the Work Health and Safety Act 2011 and the Work Health and Safety Regulation 2011.

Permits to work are designed to ensure appropriate work practices are employed in the vicinity of asbestos-containing materials/products. The permit to work will document what asbestos is to be removed, encapsulated or otherwise protected, prior to the contracted maintenance or building works proceeding. The permit to work will also indicate whether other requirements, such as the use of personal protective equipment (PPE), the installation of barricading and/or airborne fibre monitoring, are necessary.

When the work is completed, or the permit to work expires (whichever occurs first), the permit shall be signed and returned to the DEC Facility Manager for cancellation after that Manager has checked a safe situation exists.

The DEC local AMU shall be advised immediately of any incidents of non-compliance with the AMP.

Based on guidelines provided by WorkCover NSW 'Managing Asbestos in and on Soil 2014', as well as DEC's 'Asbestos Management Plan for Schools and Colleges 2014', a licenced asbestos assessor should be engaged to determine whether the buried asbestos is considered *non-friable* or *friable*. Therefore, any fibrous cement materials or other suspected asbestos-containing materials excavated should be inspected by a licenced asbestos assessor to determine if it's friable. This means that any such asbestos should be worked on only by contractors with an appropriate asbestos licence and a project specific permit issued by WorkCover NSW (in addition to the permit to work, mentioned above).

7. Legislative requirements

The following legislative requirements will apply to asbestos zone maintenance works:

- All asbestos removal and disposal work shall be carried out in accordance with the requirements of the WorkCover NSW Guidelines for Licensed Asbestos Removal Contractors
- The asbestos contractor shall notify WorkCover NSW of the proposed work at least 5 days prior to the commencement of any work in accordance with NSW Occupational Health and Safety Regulation 2011. However this time period may be waived in the case for DEC properties
- All work shall be carried out in strict accordance with the NSW Work Health and Safety Act 2011, the NSW Work Health and Safety Regulation 2011, How to Safely Remove Asbestos – Code of Practice 2011, and the Guidance Note on the Membrane Filter Method for Estimating Airborne Asbestos Fibres, 2nd Edition [NOHSC 3003 (2005)].

8. Safe work procedures for asbestos work

The following safe work procedures will apply for asbestos work:

- The removal contractor must develop a site-specific asbestos removal plan before commencing the asbestos work. Such a plan must be prepared in accordance with Section 3 of the Work Safe Australia- How to safely remove asbestos: Code of Practice 2011.
- Only personnel who have been trained in work procedures for the safe removal of asbestos shall work on asbestos.
- A trained, experienced operator must remain on duty outside the removal area and/or enclosure (if installed) at all times that asbestos removal is in progress. Curricula vitae for all persons undertaking asbestos removal works must be submitted to the Principal prior to the commencement of work on the sites.
- Removal of asbestos must generally be carried out by wet removal techniques. That is, as the asbestos material becomes accessible during the removal process, it shall be thoroughly wetted down. Care must be exercised to prevent excessive use of water. The contractor will be held responsible for any water damage.
- Decontamination facilities and procedures shall be undertaken to the complete satisfaction of a hygienist.
- Any signage existing prior to removal must be re-affixed to any new or existing assembly.
- The contractor must ensure that persons in the work area(s) are not exposed to fibre levels greater than those stated in the National Exposure Standard for the type of asbestos being removed.

PARSONS BRINCKERHOFF

Asbestos Remediation Clearance Certificate

Compliant with Part 3.10 of Safe Work Australia Code of Practice: How to Safely Remove Asbestos, Code of Practice 2011

Project Information	
Client:	The Trades Team
Contact:	Michael Soliman Unit 29/105A Vanessa Street Kingsgrove NSW 2208
Project number:	2259070A
Site Details	
Site:	5141 – Kyeemagh Infants School – Corner Jacobson Ave and Beehag St, Kyeemagh NSW 2216
Specific work area(s)/room(s):	Grassy area, at the corner of the school play field and the day care building, to Jacobson Ave.
Description of ACM removal works	
Removal contractor:	Australasian Technical Services Pty Ltd
Friable/Non-Friable:	Non-Friable
Date of removal:	9th July 2014
Scope of work:	ATS Pty Ltd was engaged to remove asbestos cement debris from ground surfaces within a section of the school's grassy play area. This encompassed the corner between the school and the adjoining day care building, and extended from the school's boundary fence to Jacobson Ave, to the large tree towards the back of the day care building (see photos).
Clearance Inspection following ACM Removal	
Inspector	Lamice Ali Visible materials from areas noted above have been removed as far as reasonably practicable. No inspection was carried out to areas that were not included in the above scope.
Date and time of inspection:	8th July 2014
Areas not accessed:	All areas below ground surfaces All areas below dense leaf litter and thick vegetation
Evidence of PVA/sealant application:	N/A
Visual inspection satisfactory:	Yes
Comments:	Parsons Brinckerhoff inspected the area and visually determined that the asbestos containing materials have been removed as far as reasonably practicable. This inspection certificate is valid for areas which were visually accessible at the time of inspection. The areas can now be returned to normal use.
WIP Airborne Fibre Monitoring	
WIP air monitoring conducted:	Yes
Results of air monitoring satisfactory:	Yes
Comments:	All Work In Progress monitoring was found to be below the detection limit of <0.01fibres/mL

Conclusion

Based on the above findings the work area/site is considered safe for reoccupation.

Issued by: Lamice Ali Signature: 

Date issued: 09/07/2014

PARSONS BRINCKERHOFF

Standard Limitations of a Clearance Certificate

A visual inspection was undertaken to assess whether visible asbestos material was removed. Inspections are only carried out to the areas detailed to be removed and are conducted where access is available. Specifically no inspection has been carried out to areas that may require further remediation to verify the presence of asbestos. It should be noted that no inspection can be regarded as absolute and that additional asbestos may be encountered or uncovered upon further inspection, building works, or excavation. The inspection was carried out at the time of the completion of the remediation works and was dependent upon site conditions at that time. Parsons Brinckerhoff accepts no responsibility or liability for the completeness of the removal. Comments above regarding the aspects of the inspection also form limitations. The contractor's responsibilities included:

- Ensuring that work methods and procedures comply with the relevant legislation, codes of practice and industry standards, and undertake work in according with technical specifications.
- Employing suitably trained, skilled and competent staff.
- Ensuring that contractors are inducted in safe work procedures for asbestos materials/products.
- Obtaining the necessary approvals from regulatory authorities prior to starting any asbestos removal or maintenance activities.
- Ensuring that all work is conducted in a safe and competent manner.

Asbestos Clearance Inspection Report

EnviroX Consulting Report – 2233 / Version 1 final

Report Details	
Job Number	2233
Client	Cardno NSW/ACT
Address	Kyeemagh Public School, Beehag St, Kyeemagh NSW
Date of Inspection	10.11.2018
Date of Air Monitoring	10.11.2018
Date of Report	11.11.2018
Asbestos removalist	Australasian Technical Services
Subject area	Kyeemagh Public School, playground area, area immediately south east of preschool, 2x test pits, top of soil following test pitting (Refer to Appendix A – Photographs)

Introduction

As per Cardno NSW/ACT's request, EnviroX Consulting has conducted an asbestos clearance inspection following the test pitting works within the subject area on the 10th of November 2018. The details of the inspection are contained within the following pages of this report.

The scope of works for EnviroX consulting is to complete;

- Completion of SWMS prior to works commencing;
- Visual inspection of the subject area following the test pitting works;
- Asbestos air monitoring during the test pitting works; and
- Preparation of an Asbestos Clearance Inspection Report outlining the details and findings of the site inspection.

The survey works and production of this report have been undertaken in accordance with the requirements of:

- WHS Regulation 2017.
- WHS Act 2011.
- NSW Code of Practice: How to Manage and Control Asbestos in the Workplace (2016).
- NSW Code of Practice: How to Safely Remove Asbestos (2016).

Site Inspection Details

Visual inspection of the subject area at the time of inspection revealed no asbestos containing materials on the soil surface following the test pitting works.

Asbestos air monitoring undertaken during the test pitting works revealed that the concentrations of airborne fibres were below 0.01 fibre/mL (Refer to Appendix B – Laboratory reports).

All areas outside the specified subject area are not included within this report and may contain asbestos containing materials.

Restrictions and limitations upon clearance Certificate

This asbestos clearance inspection report is restricted to the subject area detailed above. The details within this report are of the site during the inspection only. Areas adjacent to and below the subject area are outside the scope of this report and may contain asbestos materials. This report is based on findings at the time of the inspection, erosion events such as but not limited to wind and traffic (pedestrian or vehicle), may/will expose asbestos containing material beneath the surface which is not included within this report.

If asbestos is found or presumed within this site, EnviroX should be contacted to conduct an inspection and assess the risks associated with the material found.

This report does not provide a complete evaluation of the condition of the site; it is limited to the scope defined as above. Should information become available regarding site conditions including previously unknown sources of contamination, EnviroX reserves the right to review the report in relation to the additional information.

Conclusions

Based on the information presented in this report, it is in the opinion of EnviroX Consulting that;

- Visual inspection of the subject area at the time of inspection revealed there was no asbestos containing materials on the soil surface;
- EnviroX Consulting deems the subject area **safe** for reoccupation;
- Asbestos air monitoring undertaken during the works revealed that the concentration of airborne fibres was below 0.01 fibres/mL;
- This report should be taken as giving an overall idea of the site inspection. Each section must be read in conjunction with the whole of this report, including attachments, no one section should be taken out of this report and read separately; and
- Remain diligent and adhere to the limitation and restrictions stated within this report.

Air Monitoring for Airborne Asbestos

1. Introduction:

This report presents the results of three control air monitoring samples carried out* on 10 November 2018 by Envirox Consulting for analysis for airborne asbestos. Three air monitoring samples were forwarded for analysis by Envirox Consulting on 10 November 2018.

2. Methods:

In accordance with the Work-safe Australia Guidance Notes on Membrane Filter Method on estimating air borne asbestos fibres – Second Edition – NOHSC – 3003 (2005) and **Safer Environment Method 2** as supplementary work instructions.

3. Results:

Location 10/11/2018	Fibers / 100 Fields	Fibers/mL
1- ASET69235 / 72415 / 1 – A19	**1.0 / 100**	**< 0.01**
2- ASET69235 / 72415 / 2 – A88	**1.5 / 100**	**< 0.01**
3- ASET69235 / 72415 / 3 – A321	**0.0 / 100**	**< 0.01**

Reported by,

Mahen De Silva. BSc, MSc, Grad Dip (Occ Hyg)
Occupational Hygienist / Approved Counter
Approved Signatory

Accredited for compliance with ISO/IEC 17025.

***Air monitoring was carried out by Envirox Consulting's trained staff and ASET do not take responsibility for that part.**

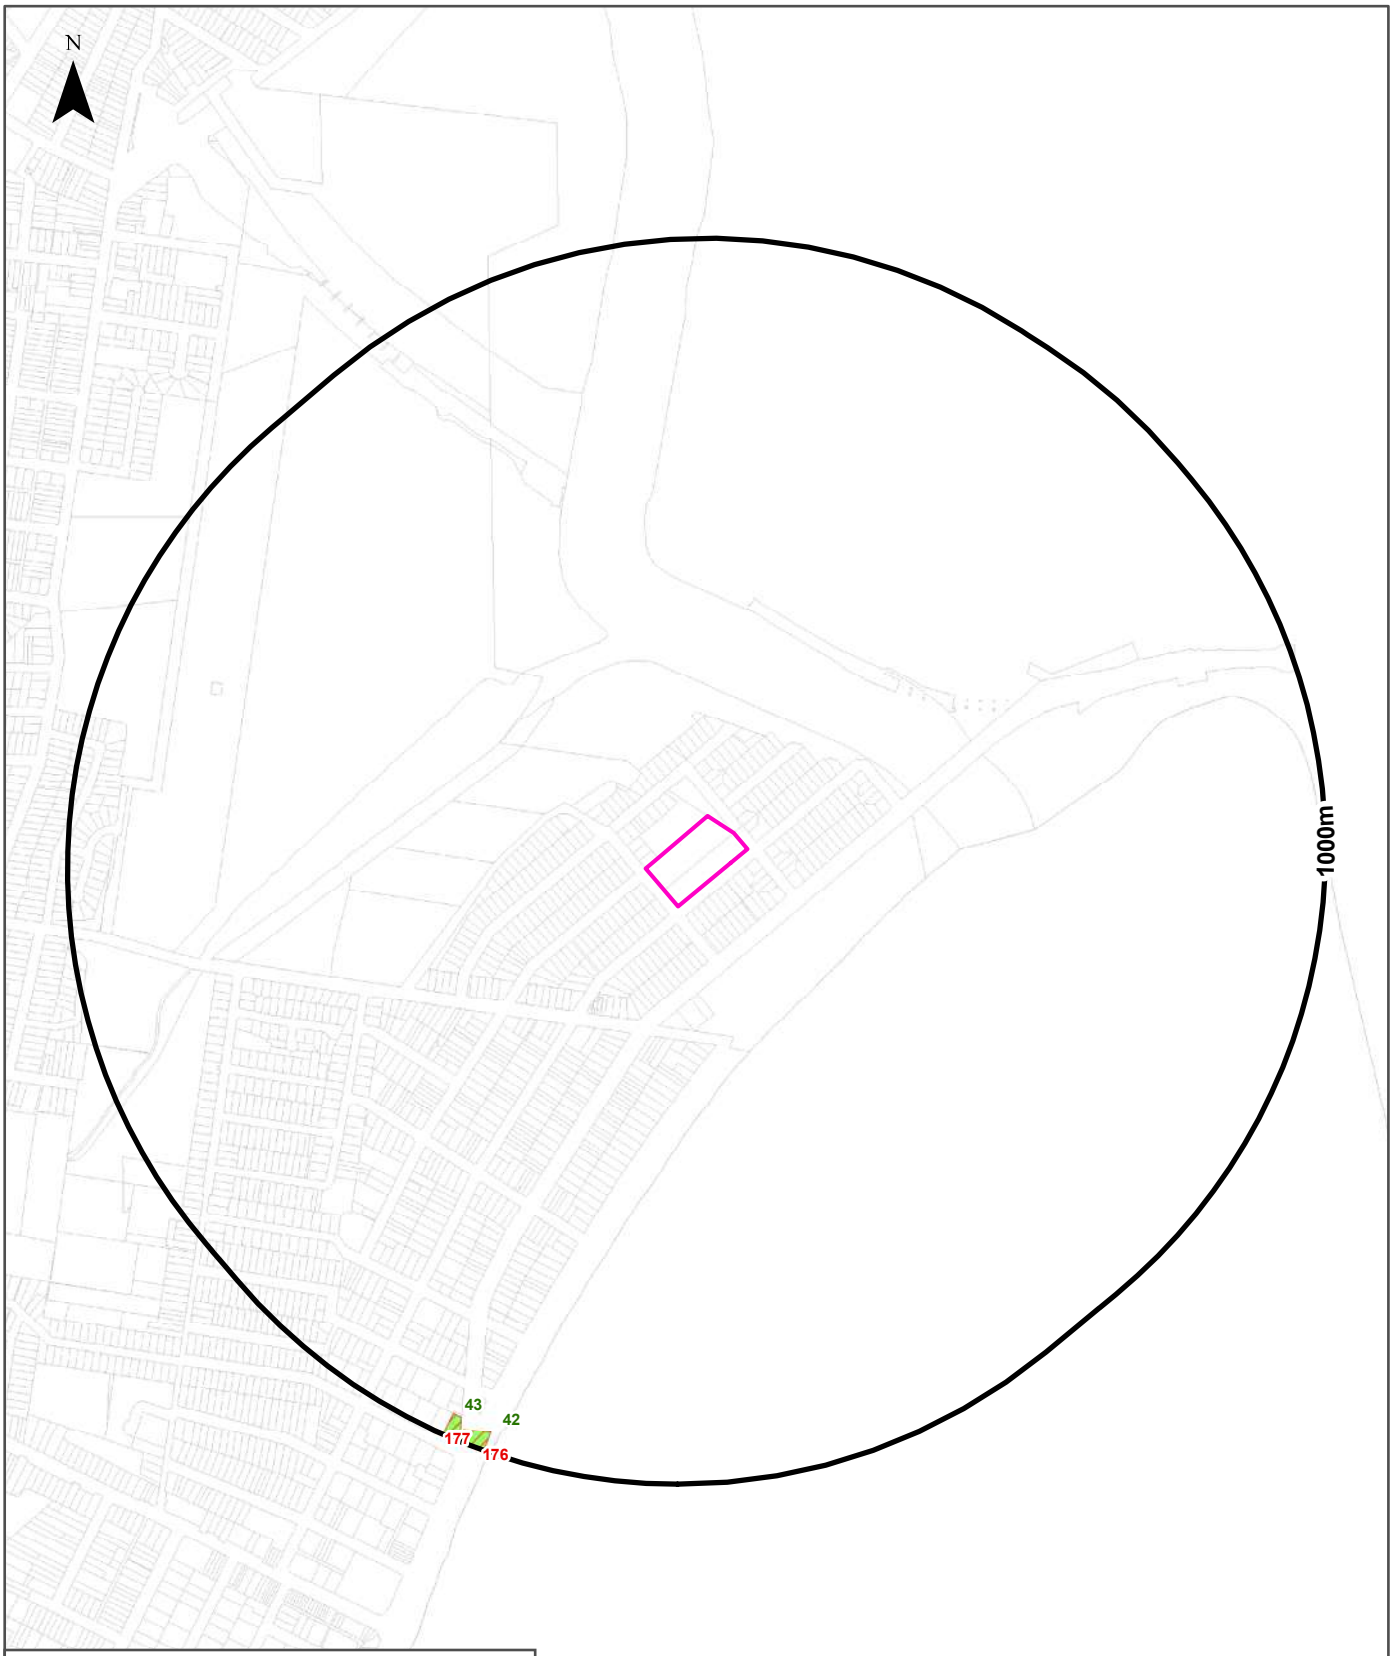
Contaminated Land & Waste Management Facilities

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216



Contaminated Land & Waste Management Facilities

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

List of NSW contaminated sites notified to EPA

Records from the NSW EPA Contaminated Land list within the dataset buffer:

Map Id	Site	Address	Suburb	Activity	Management Class	Status	Location Confidence	Dist (m)	Direction
177	Shell Service Station Brighton Le Sands & adjacent land	2 General Holmes Drive	Brighton-Le-Sands	Service Station	Contamination formerly regulated under the CLM Act	Current EPA List	Premise Match	960m	South West
176	Cook Park	General Holmes Drive	Brighton-Le-Sands	Service Station	Contamination formerly regulated under the CLM Act	Current EPA List	Premise Match	966m	South

The values within the EPA site management class in the table above, are given more detailed explanations in the table below:

EPA site management class	Explanation
Contamination being managed via the planning process (EP&A Act)	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. The contamination of this site is managed by the consent authority under the Environmental Planning and Assessment Act 1979 (EP&A Act) planning approval process, with EPA involvement as necessary to ensure significant contamination is adequately addressed. The consent authority is typically a local council or the Department of Planning and Environment.
Contamination currently regulated under CLM Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the Contaminated Land Management Act 1997 (CLM Act). Management of the contamination is regulated by the EPA under the CLM Act. Regulatory notices are available on the EPA's Contaminated Land Public Record of Notices.
Contamination currently regulated under POEO Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. Management of the contamination is regulated under the Protection of the Environment Operations Act 1997 (POEO Act). The EPA's regulatory actions under the POEO Act are available on the POEO public register.
Contamination formerly regulated under the CLM Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation under the Contaminated Land Management Act 1997 (CLM Act). The contamination was addressed under the CLM Act.
Contamination formerly regulated under the POEO Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed under the Protection of the Environment Operations Act 1997 (POEO Act).
Contamination was addressed via the planning process (EP&A Act)	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed by the appropriate consent authority via the planning process under the Environmental Planning and Assessment Act 1979 (EP&A Act).
Ongoing maintenance required to manage residual contamination (CLM Act)	The EPA has determined that ongoing maintenance, under the Contaminated Land Management Act 1997 (CLM Act), is required to manage the residual contamination. Regulatory notices under the CLM Act are available on the EPA's Contaminated Land Public Record of Notices.
Regulation being finalised	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the Contaminated Land Management Act 1997. A regulatory approach is being finalised.
Regulation under the CLM Act not required	The EPA has completed an assessment of the contamination and decided that regulation under the Contaminated Land Management Act 1997 is not required.
Under assessment	The contamination is being assessed by the EPA to determine whether regulation is required. The EPA may require further information to complete the assessment. For example, the completion of management actions regulated under the planning process or Protection of the Environment Operations Act 1997. Alternatively, the EPA may require information via a notice issued under s77 of the Contaminated Land Management Act 1997 or issue a Preliminary Investigation Order.

NSW EPA Contaminated Land List Data Source: Environment Protection Authority

Contaminated Land & Waste Management Facilities

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

Contaminated Land: Records of Notice

Record of Notices within the dataset buffer:

Map Id	Name	Address	Suburb	Notices	Area No	Location Confidence	Distance	Direction
43	Shell Service Station Brighton Le Sands & adjacent land	2 General Holmes Drive	Brighton-le-sands	4 former	3174	Premise Match	960m	South West
42	Cook Park	General Holmes Drive	Brighton-le-sands	6 former	3285	Premise Match	966m	South

Contaminated Land Records of Notice Data Source: Environment Protection Authority

Former Gasworks

Former Gasworks within the dataset buffer:

Map Id	Location	Council	Further Info	Location Confidence	Distance	Direction
N/A	No records in buffer					

Former Gasworks Data Source: Environment Protection Authority

National Waste Management Site Database

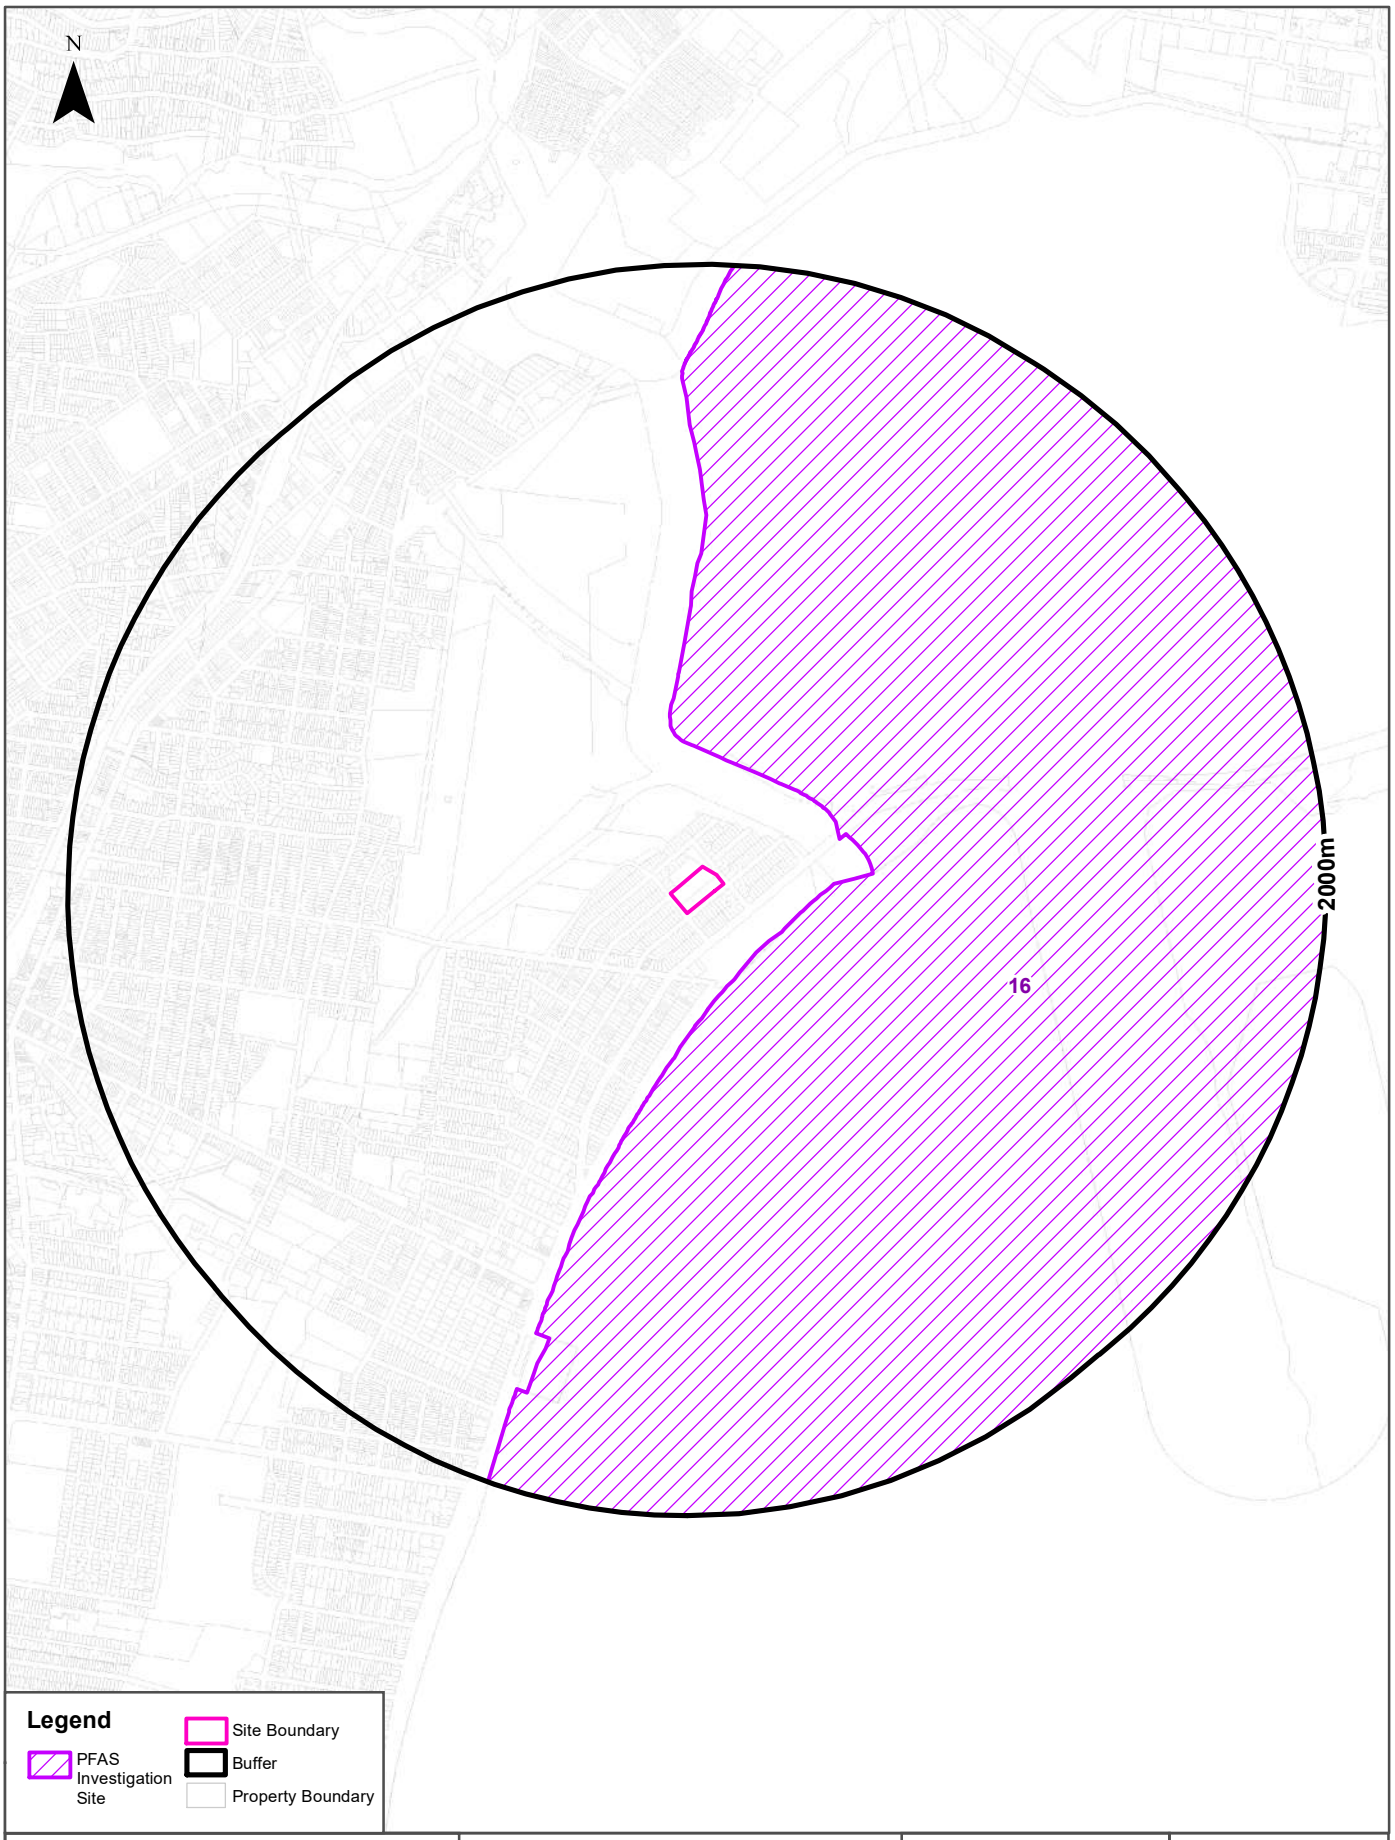
Sites on the National Waste Management Site Database within the dataset buffer:

Site Id	Owner	Name	Address	Suburb	Class	Landfill	Reprocess	Transfer	Comments	Loc Conf	Dist (m)	Direction
N/A	No records in buffer											

Waste Management Facilities Data Source: Geoscience Australia

EPA PFAS Investigation Program

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216



EPA PFAS Investigation Program

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

EPA PFAS Investigation Program

Sites that are part of the EPA PFAS investigation program, within the dataset buffer:

Id	Site	Address	Location Confidence	Distance	Direction
16	Botany Bay area & Georges River	Botany Bay area & Georges River	General Area/ Suburb Match	243m	South

EPA PFAS Investigation Program: Environment Protection Authority

EPA Other Sites with Contamination Issues

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

EPA Other Sites with Contamination Issues

This dataset contains other sites identified on the EPA website as having contamination issues. This dataset currently includes:

- James Hardie asbestos manufacturing and waste disposal sites
- Radiological investigation sites in Hunter's Hill

Sites within the dataset buffer:

Site Id	Site Name	Site Address	Dataset	Comments	Location Confidence	Distance	Direction
N/A	No records in buffer						

EPA Other Sites with Contamination Issues: Environment Protection Authority

EPA Activities

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

Licensed Activities under the POEO Act 1997

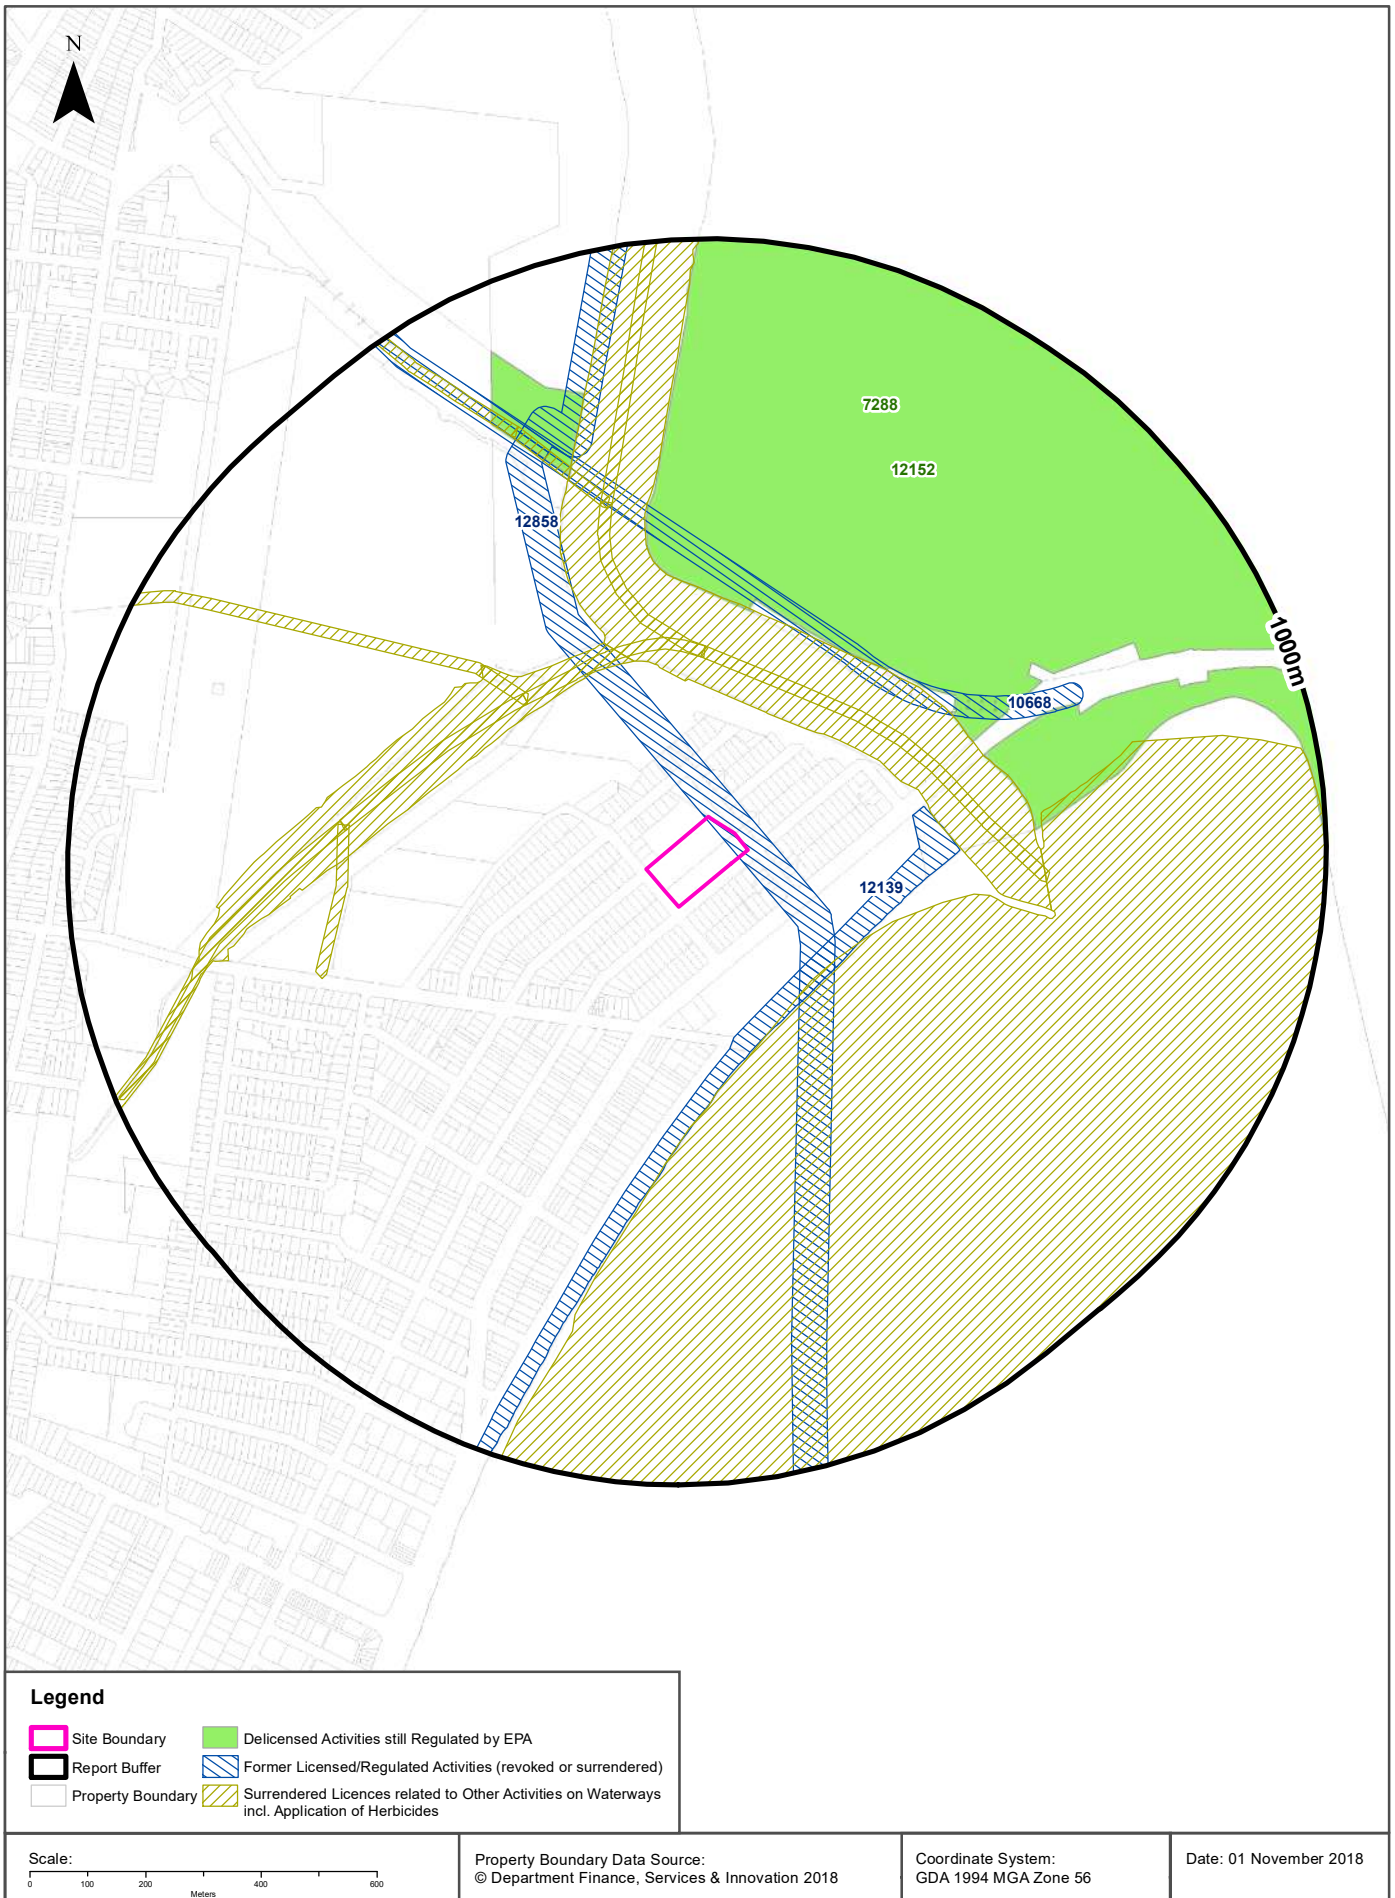
Licensed activities under the Protection of the Environment Operations Act 1997, within the dataset buffer:

EPL	Organisation	Name	Address	Suburb	Activity	Loc Conf	Distance	Direction
N/A	No records in buffer							

POEO Licence Data Source: Environment Protection Authority

Delicensed & Former Licensed EPA Activities

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216



EPA Activities

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

Delicensed Activities still regulated by the EPA

Delicensed activities still regulated by the EPA, within the dataset buffer:

Licence No	Organisation	Name	Address	Suburb	Activity	Loc Conf	Distance	Direction
7288	SYDNEY AIRPORT CORPORATION LIMITED	SYDNEY AIRPORT	241 O'RIODAN STREET	MASCOT	Hazardous, Industrial or Group A Waste Generation or Storage	Premise Match	361m	North East
12152	QANTAS AIRWAYS LIMITED	Qantas Jet Base	Sydney Airport	MASCOT	Hazardous, Industrial or Group A Waste Generation or Storage	Premise Match	361m	North East

Delicensed Activities Data Source: Environment Protection Authority

Former Licensed Activities under the POEO Act 1997, now revoked or surrendered

Former Licensed activities under the Protection of the Environment Operations Act 1997, now revoked or surrendered, within the dataset buffer:

Licence No	Organisation	Location	Status	Issued Date	Activity	Loc Conf	Distance	Direction
12858	MCCONNELL DOWELL CONSTRUCTORS (AUST) PTY LTD	Various streets from Kurnell to Erskineville, including the pipeline route across Botany Bay, KURNELL, NSW 2231	Surrendered	01/05/2008	Water-based extractive activity, Miscellaneous licensed discharge to waters (at any time)	Network of Features	0m	Onsite
4653	LUHRMANN ENVIRONMENT MANAGEMENT PTY LTD	WATERWAYS THROUGHOUT NSW	Surrendered		Other Activities / Non Scheduled Activity - Application of Herbicides	Network of Features	205m	-
4838	Robert Orchard	Various Waterways throughout New South Wales - SYDNEY NSW 2000	Surrendered		Other Activities / Non Scheduled Activity - Application of Herbicides	Network of Features	205m	-
6630	SYDNEY WEED & PEST MANAGEMENT PTY LTD	WATERWAYS THROUGHOUT NSW - PROSPECT, NSW, 2148	Surrendered		Other Activities / Non Scheduled Activity - Application of Herbicides	Network of Features	205m	-
12139	WARD CIVIL & ENVIRONMENTAL ENGINEERING PTY LTD	Lady Robinsion Beach Restoration, Taylor Bar and Kyeemagh Bar Borrow Pits, DOLLS POINT, NSW 2219	Surrendered	19/05/2004	Water-based extractive activity	Network of Features	210m	South
10668	BILFINGER BERGER PROJECT INVESTMENTS PTY LTD	M5 EAST BETWEEN KINGS GEORGES RD, BEVERLY HILLS & GENERAL HOLMES DRIVE, KYEEMAGH, EARLWOOD, NSW 2206	Surrendered	05/06/2001	Road construction	Road Match	349m	North

Former Licensed Activities Data Source: Environment Protection Authority

UPSS Sensitive Zones

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

Historical Business Directories

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

1991 Business to Business Directory Records Premise or Road Intersection Matches

Records from the 1991 UBD Business to Business Directory, mapped to a premise or road intersection, within the dataset buffer:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Feature Point	Direction
N/A	No records in buffer				

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

1991 Business to Business Directory Records Road or Area Matches

Records from the 1991 UBD Business to Business Directory, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Road Corridor or Area
N/A	No records in buffer			

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

Historical Business Directories

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

1986 Business to Business Directory Records Premise or Road Intersection Matches

Records from the 1986 UBD Business to Business Directory, mapped to a premise or road intersection, within the dataset buffer:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Feature Point	Direction
N/A	No records in buffer				

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

1986 Business to Business Directory Records Road or Area Matches

Records from the 1986 UBD Business to Business Directory, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Road Corridor or Area
N/A	No records in buffer			

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

Historical Business Directories

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

1982 Business Directory Records
Premise or Road Intersection Matches

Records from the 1982 UBD Business Directory, mapped to a premise or road intersection, within the dataset buffer:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Feature Point	Direction
N/A	No records in buffer				

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

1982 Business Directory Records
Road or Area Matches

Records from the 1982 UBD Business Directory, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Road Corridor or Area
N/A	No records in buffer			

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

Historical Business Directories

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

1978 Business Directory Records
Premise or Road Intersection Matches

Records from the 1978 UBD Business Directory, mapped to a premise or road intersection, within the dataset buffer:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Feature Point	Direction
N/A	No records in buffer				

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

1978 Business Directory Records
Road or Area Matches

Records from the 1978 UBD Business Directory, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Road Corridor or Area
N/A	No records in buffer			

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

Historical Business Directories

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

1975 Business Directory Records
Premise or Road Intersection Matches

Records from the 1975 UBD Business Directory, mapped to a premise or road intersection, within the dataset buffer:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Feature Point	Direction
N/A	No records in buffer				

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

1975 Business Directory Records
Road or Area Matches

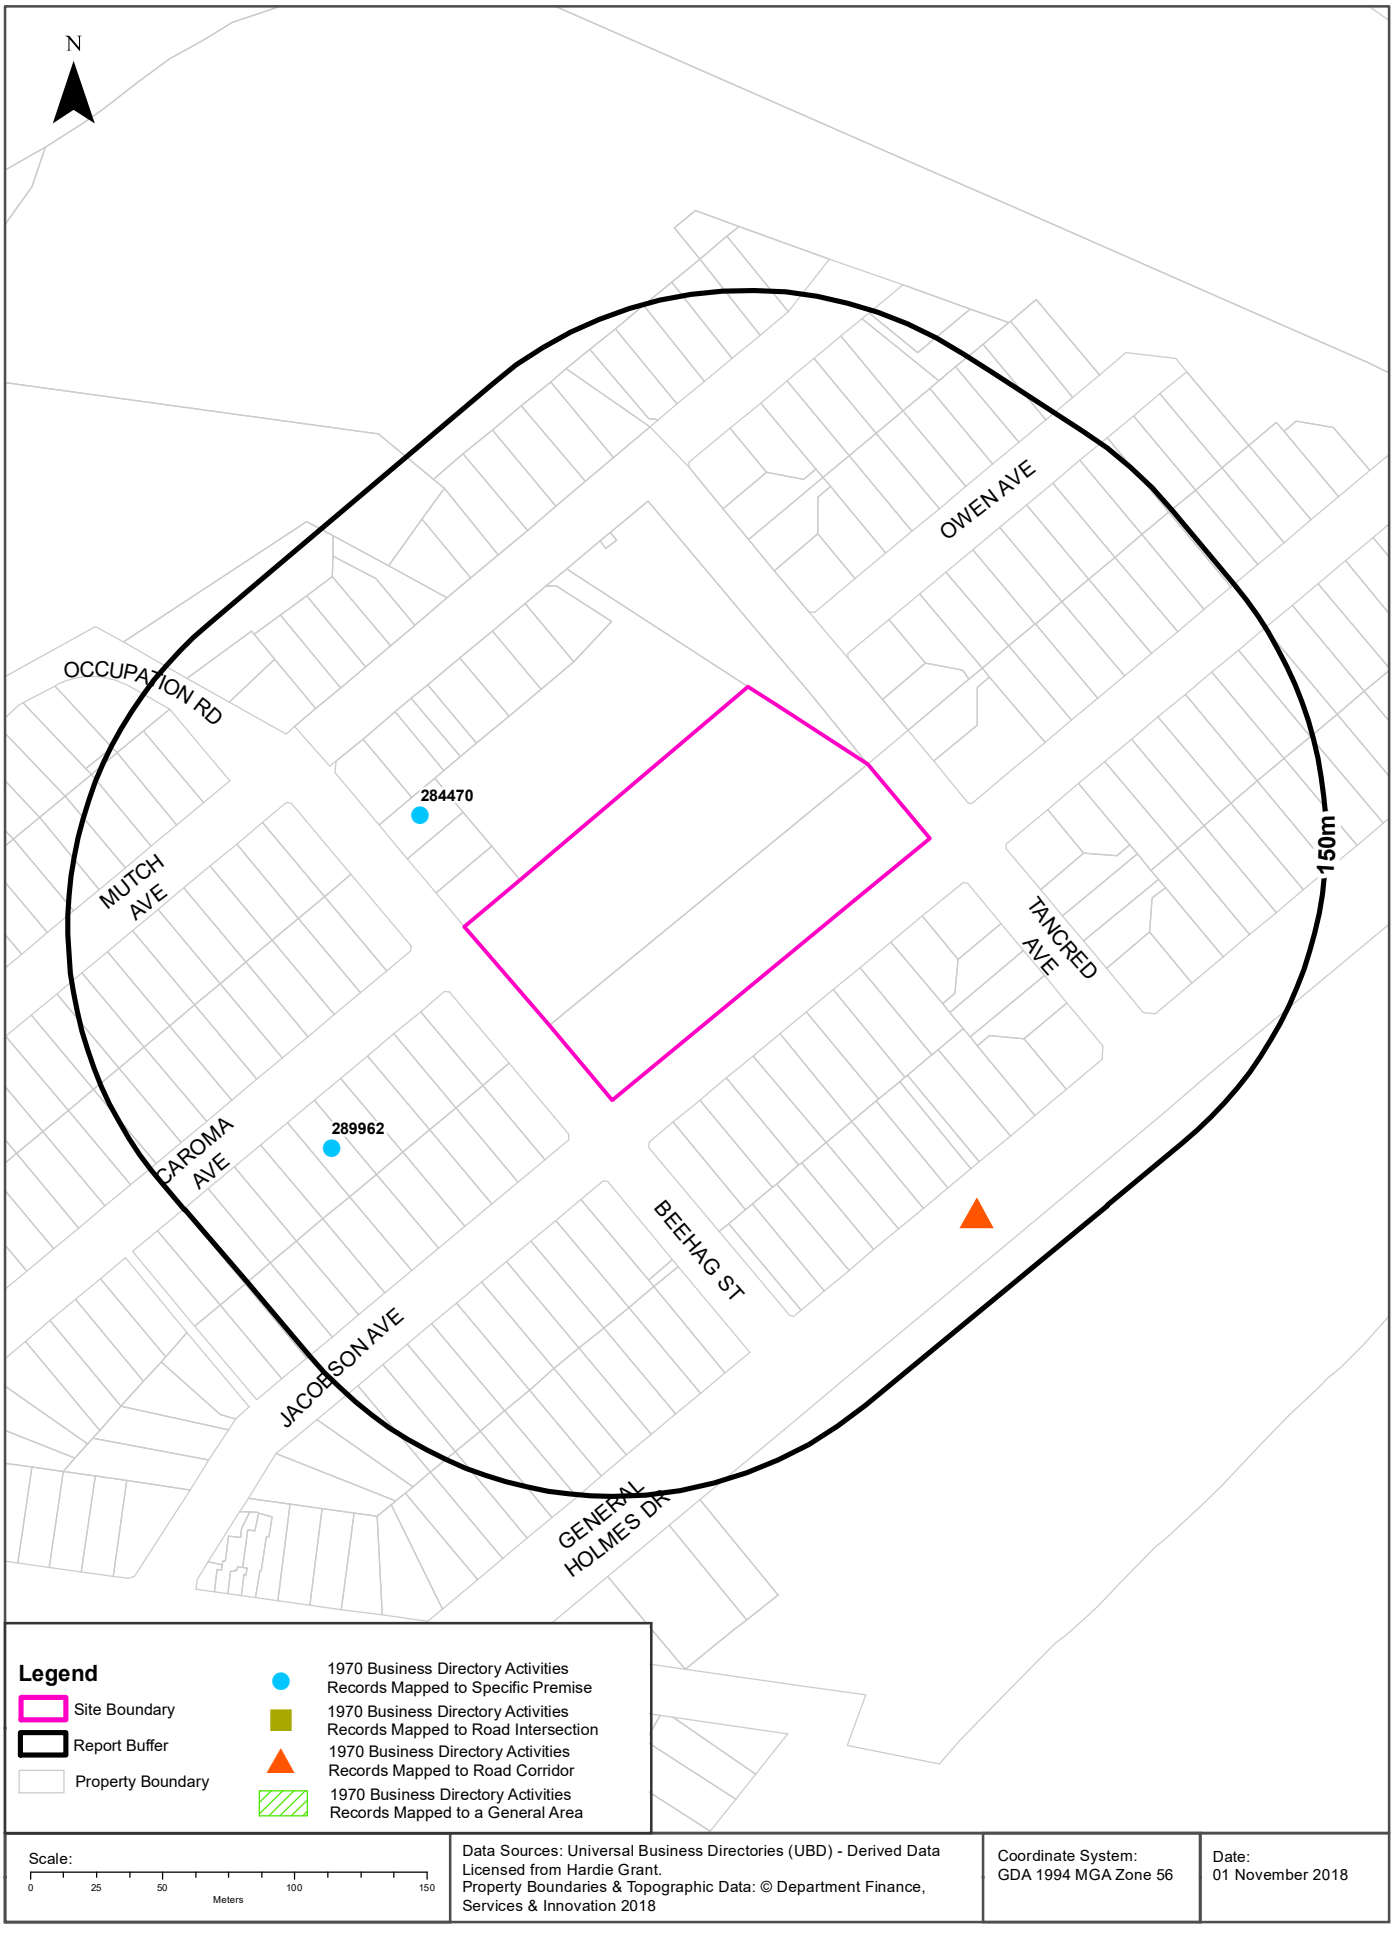
Records from the 1975 UBD Business Directory, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Road Corridor or Area
N/A	No records in buffer			

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

1970 Historical Business Directory Records

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216



Historical Business Directories

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

1970 Business Directory Records
Premise or Road Intersection Matches

Records from the 1970 UBD Business Directory, mapped to a premise or road intersection, within the dataset buffer:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Feature Point	Direction
CLUBS & SPORTING BODIES (C487)	N.S.W. Leagues Club Bowling Club, 2 Beehag St., Kyeemagh	284470	Premise Match	43m	West
DIVERS (D415)	Gray,J.W.& Gray M.J.W., 27 Caroma Ave., North Brighton-le- Sands	289962	Premise Match	93m	South West

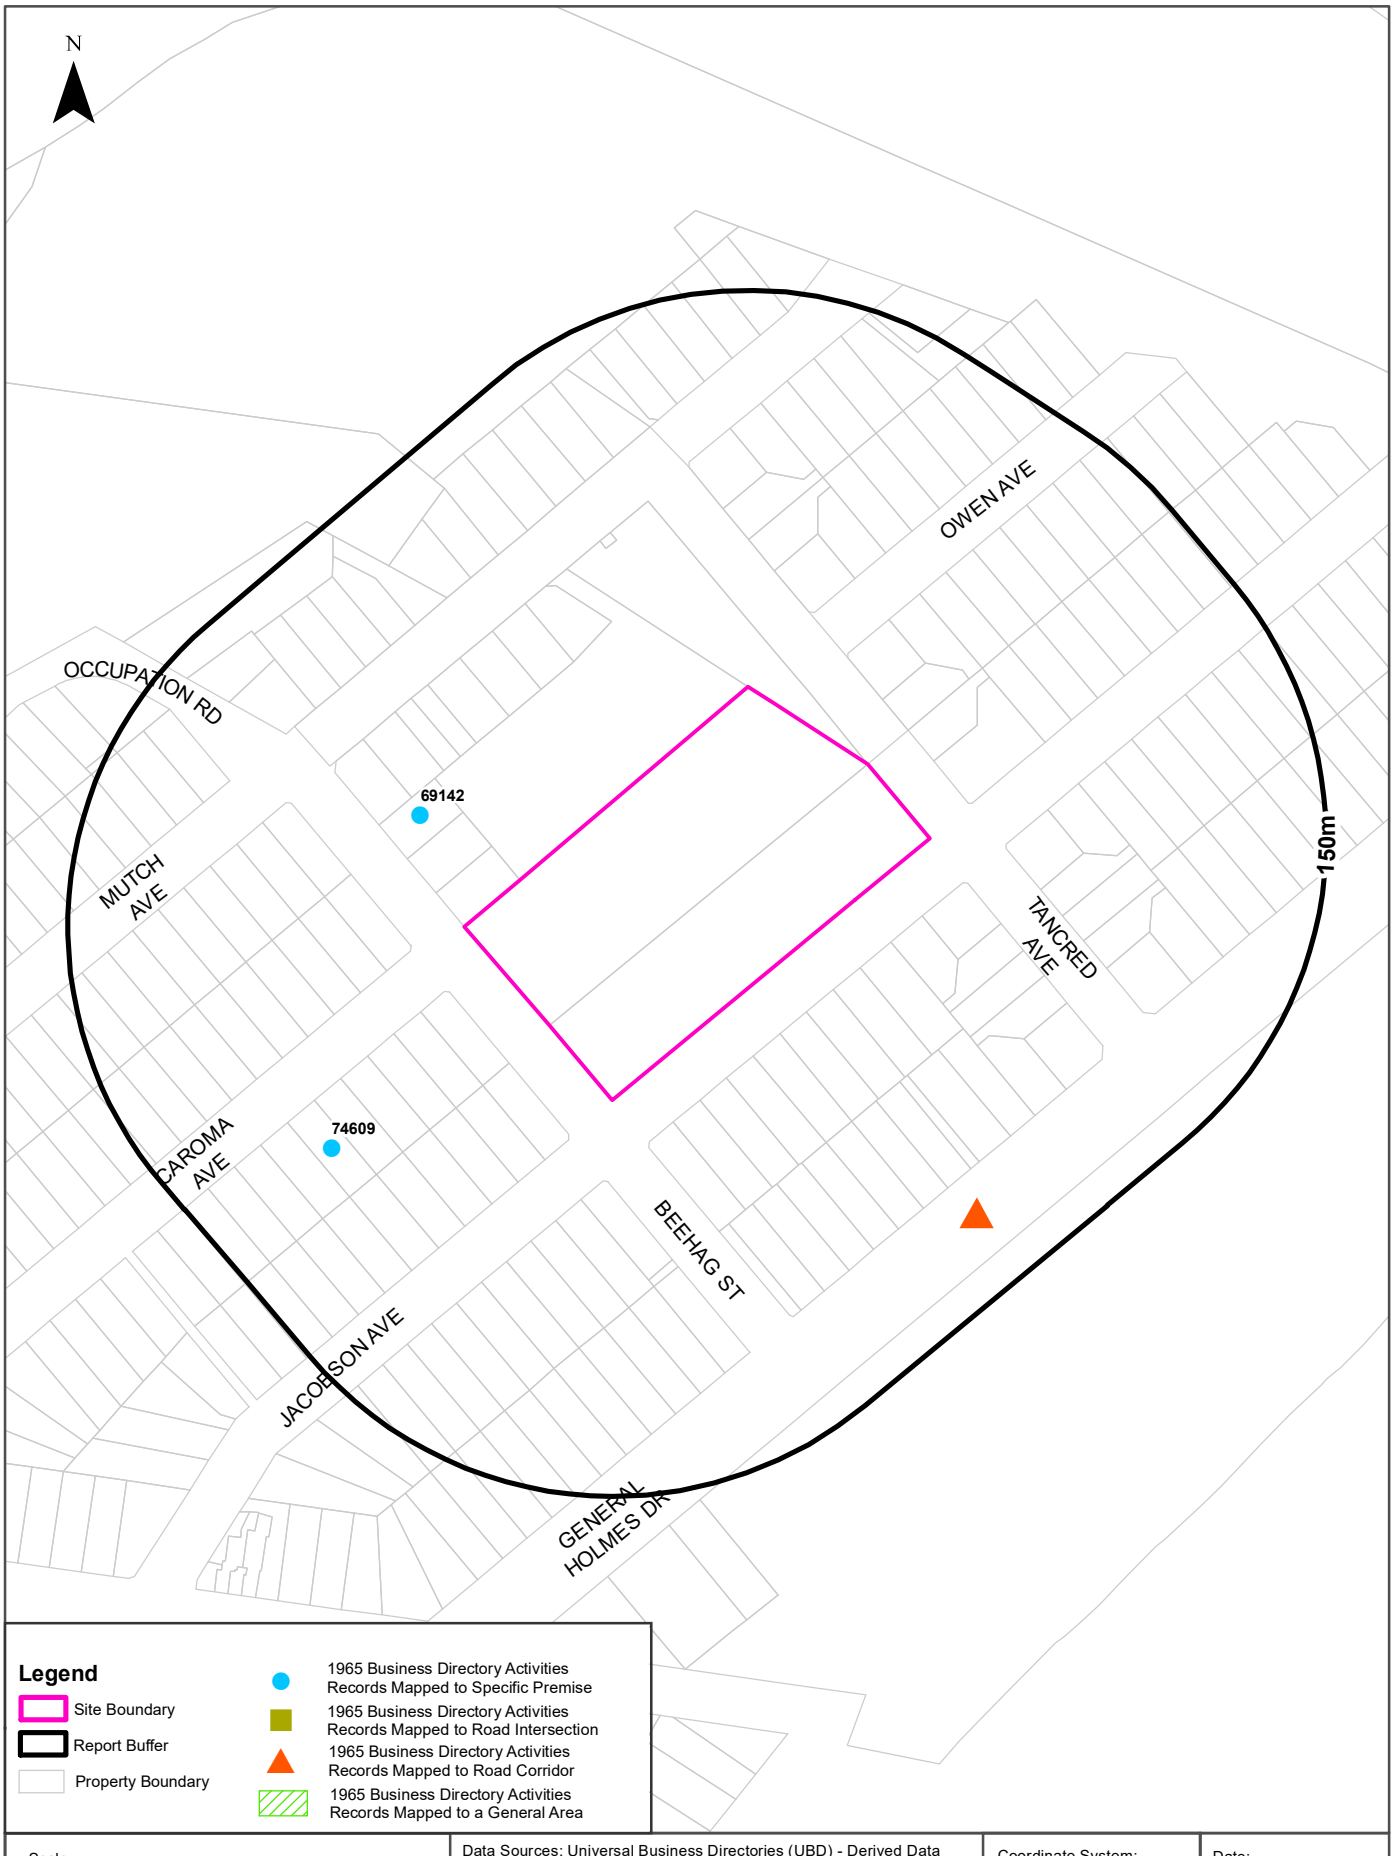
1970 Business Directory Records
Road or Area Matches

Records from the 1970 UBD Business Directory, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Road Corridor or Area
FRUITERERS/GREENGROCERS (F640)	Arena's Fruit Market, 159 General Holmes Drv., Kyeemagh	306597	Road Match	106m

1965 Historical Business Directory Records

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216



Historical Business Directories

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

1965 Business Directory Records
Premise or Road Intersection Matches

Records from the 1965 UBD Business Directory, mapped to a premise or road intersection, within the dataset buffer:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Feature Point	Direction
Clubs & Sporting Bodies	N.S.W. Leagues Club Bowling Club, 2 Beehag St., Kyeemagh	69142	Premise Match	43m	West
Divers	Gray, J. W. & Gray M. J. W., 27 Caroma Ave., North Brighton-le-Sands	74609	Premise Match	93m	South West

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

1965 Business Directory Records
Road or Area Matches

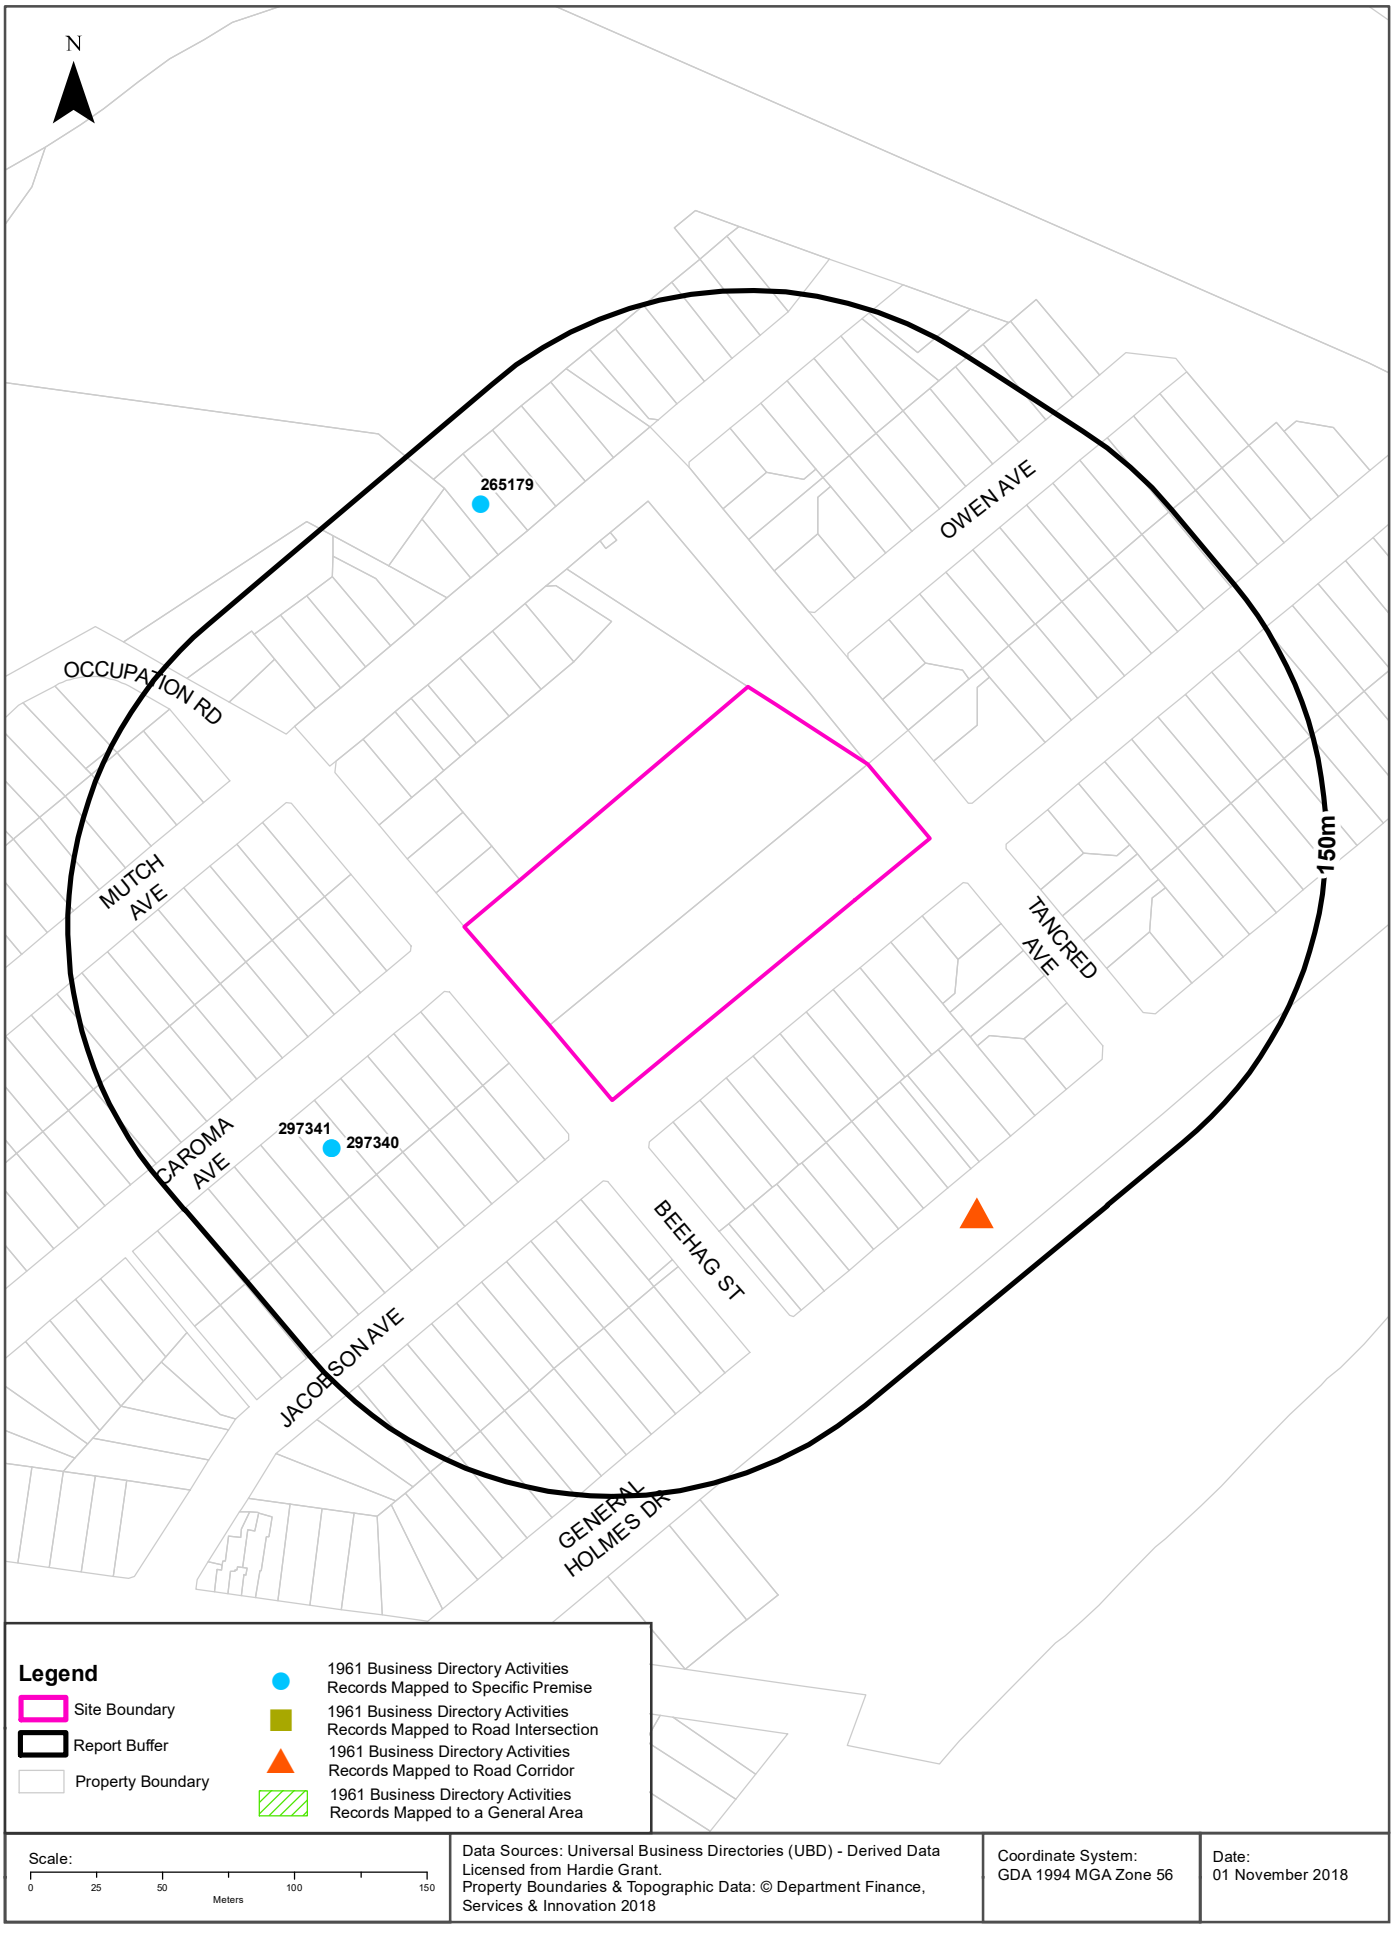
Records from the 1965 UBD Business Directory, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Road Corridor or Area
Boat, Launch & Yacht Builder & Repairers	Riley Bros.., General Holmes Drv., Kyeemagh	52117	Road Match	106m
Boats, Launches & Yachts - For Hire	Riley Bros.., General Holmes Drv., Kyeemagh	52221	Road Match	106m
Milk, Fruit Juice Bars/Confectioners	Smith, N. M., 158 General Holmes Drv., Kyeemagh	115609	Road Match	106m

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

1961 Historical Business Directory Records

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216



Historical Business Directories

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

1961 Business Directory Records
Premise or Road Intersection Matches

Records from the 1961 UBD Business Directory, mapped to a premise or road intersection, within the dataset buffer:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Feature Point	Direction
DIVERS	Gray, J. W. & Gray M. J. W., 27 Caroma Ave., North Brighton-le-Sands	297340	Premise Match	93m	South West
DIVERS	Gray, J. W., 27 Caroma Ave., Kyeemagh	297341	Premise Match	93m	South West
ACCOUNTANTS & AUDITORS	Howlson, L. J., 72 Mutch Ave., Kyeemagh	265179	Premise Match	118m	North West

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

1961 Business Directory Records
Road or Area Matches

Records from the 1961 UBD Business Directory, mapped to a road or an area, within the dataset buffer. Records are mapped to the road when a building number is not supplied, cannot be found, or the road has been renumbered since the directory was published:

Business Activity	Premise	Ref No.	Location Confidence	Distance to Road Corridor or Area
ARCHITECTURAL DRAFTSMEN	Riley Bros., General Holmes Drive, Kyeemagh	268630	Road Match	106m
ARMATURE WINDERS	Riley Bros., General Holmes Drive, Kyeemagh	268672	Road Match	106m
MILK, FRUIT JUICE BARS/CONFECTIONERS	Smith, N. M., 158 General Holmes Drv., Kyeemagh	339629	Road Match	106m

Business Directory Content Derived from Universal Business Directories (UBD) - Licensed from Hardie Grant

Points of Interest

What Points of Interest exist within the dataset buffer?

Map Id	Feature Type	Label	Distance	Direction
650230	Primary School	KYEEMAGH INFANTS SCHOOL	0m	Onsite
650302	Child Care Centre	NORTH BRIGHTON PRE-SCHOOL	0m	Onsite
650301	Suburb	KYEEMAGH	177m	South West
650298	Park	COOK PARK	178m	East
650300	Park	MUTCH AVENUE RESERVE	193m	South West
650280	Park	KYEEMAGH RESERVE	223m	North
650293	Club	KYEEMAGH RSL AND COMMUNITY CLUB	224m	North West
650299	Wharf	Wharf	257m	North
650259	Boat Ramp	Boat Ramp	260m	North
650241	Wharf	Wharf	272m	North
650296	Sports Field	HOCKEY FIELD	274m	North West
650240	Picnic Area	Picnic Area	285m	North
650396	Community Facility	ST GEORGE RANDWICK HOCKEY CLUB	306m	North West
650199	Park	MUDDY CREEK RESERVE	389m	West
650295	Wharf	Wharf	601m	West
650289	Park	LANCE STUDDERT RESERVE	608m	West
650249	Wharf	Wharf	611m	West
650258	Boat Ramp	Boat Ramp	619m	West
650250	Wharf	Wharf	620m	West
650257	Slipway	Slipway	622m	West
650254	Wharf	Wharf	625m	West
650256	Slipway	Slipway	627m	West
650255	Slipway	Slipway	632m	West
650189	Sports Centre	ST GEORGE SOCCER STADIUM	641m	West
650252	Wharf	Wharf	644m	West
650253	Wharf	Wharf	646m	West
650251	Wharf	Wharf	650m	West
650304	Wharf	Wharf	691m	West
650305	Wharf	Wharf	693m	West
650303	Wharf	Wharf	696m	West

Map Id	Feature Type	Label	Distance	Direction
650281	Park	FRANK SEARLE GARDENS	723m	West
650210	Park	BARTON PARK	759m	West
650294	Sports Field	AP AUSTIN FIELD	773m	North West
650297	Community Home	JENNY-LYN NURSING HOME	804m	South West
650208	Park	RIVERINE PARK	851m	North West
650221	Sports Field	BASEBALL FIELD	888m	North West
650200	Park	WHITEOAK RESERVE	902m	South West
650190	Golf Course	BARTON PARK GOLF RANGE	940m	North West

Topographic Features

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

Tanks (Areas)

What are the Tank Areas located within the dataset buffer?
Note. The large majority of tank features provided by LPI are derived from aerial imagery & are therefore primarily above ground tanks.

Map Id	Tank Type	Status	Name	Feature Currency	Distance	Direction
	No records in buffer					

Tanks (Points)

What are the Tank Points located within the dataset buffer?
Note. The large majority of tank features provided by LPI are derived from aerial imagery & are therefore primarily above ground tanks.

Map Id	Tank Type	Status	Name	Feature Currency	Distance	Direction
	No records in buffer					

Major Easements

What Major Easements exist within the dataset buffer?
Note. Easements provided by LPI are not at the detail of local governments. They are limited to major easements such as Right of Carriageway, Electrical Lines (66kVa etc.), Easement to drain water & Significant subterranean pipelines (gas, water etc.).

Map Id	Easement Class	Easement Type	Easement Width	Distance	Direction
120112200	Primary	Undefined		444m	North East
120116094	Primary	Undefined		444m	North
120110460	Primary	Undefined		636m	South West
120112434	Primary	Undefined		812m	West

Topographic Features

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

State Forest

What State Forest exist within the dataset buffer?

State Forest Number	State Forest Name	Distance	Direction
N/A	No records in buffer		

National Parks and Wildlife Service Reserves

What NPWS Reserves exist within the dataset buffer?

Reserve Number	Reserve Type	Reserve Name	Gazetted Date	Distance	Direction
N/A	No records in buffer				

Elevation Contours (m AHD)

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

Accuracy & Currency: This contour data can be up to 0.4 of the contour interval out in height and must therefore not be used for any design or engineering works, but only as a general guide to topography. Gaps may occur along contour lines due to vertical topography, obscured topography in the source photography such as buildings, dense vegetation or dead ground, or the fact that original buildings have been replaced in the intervening thirty years since the original contour capture.

Scale: 0 100 200 400 Meters	Data Sources: Property Boundaries & Topographic Data: © Department Finance, Services & Innovation 2018	Coordinate System: GDA 1994 MGA Zone 56	Date: 01 November 2018

Hydrogeology & Groundwater

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

Hydrogeology

Description of aquifers on-site:

Description
Porous, extensive highly productive aquifers

Description of aquifers within the dataset buffer:

Description
Porous, extensive aquifers of low to moderate productivity
Porous, extensive highly productive aquifers

Hydrogeology Map of Australia : Commonwealth of Australia (Geoscience Australia)

Botany Groundwater Management Zones

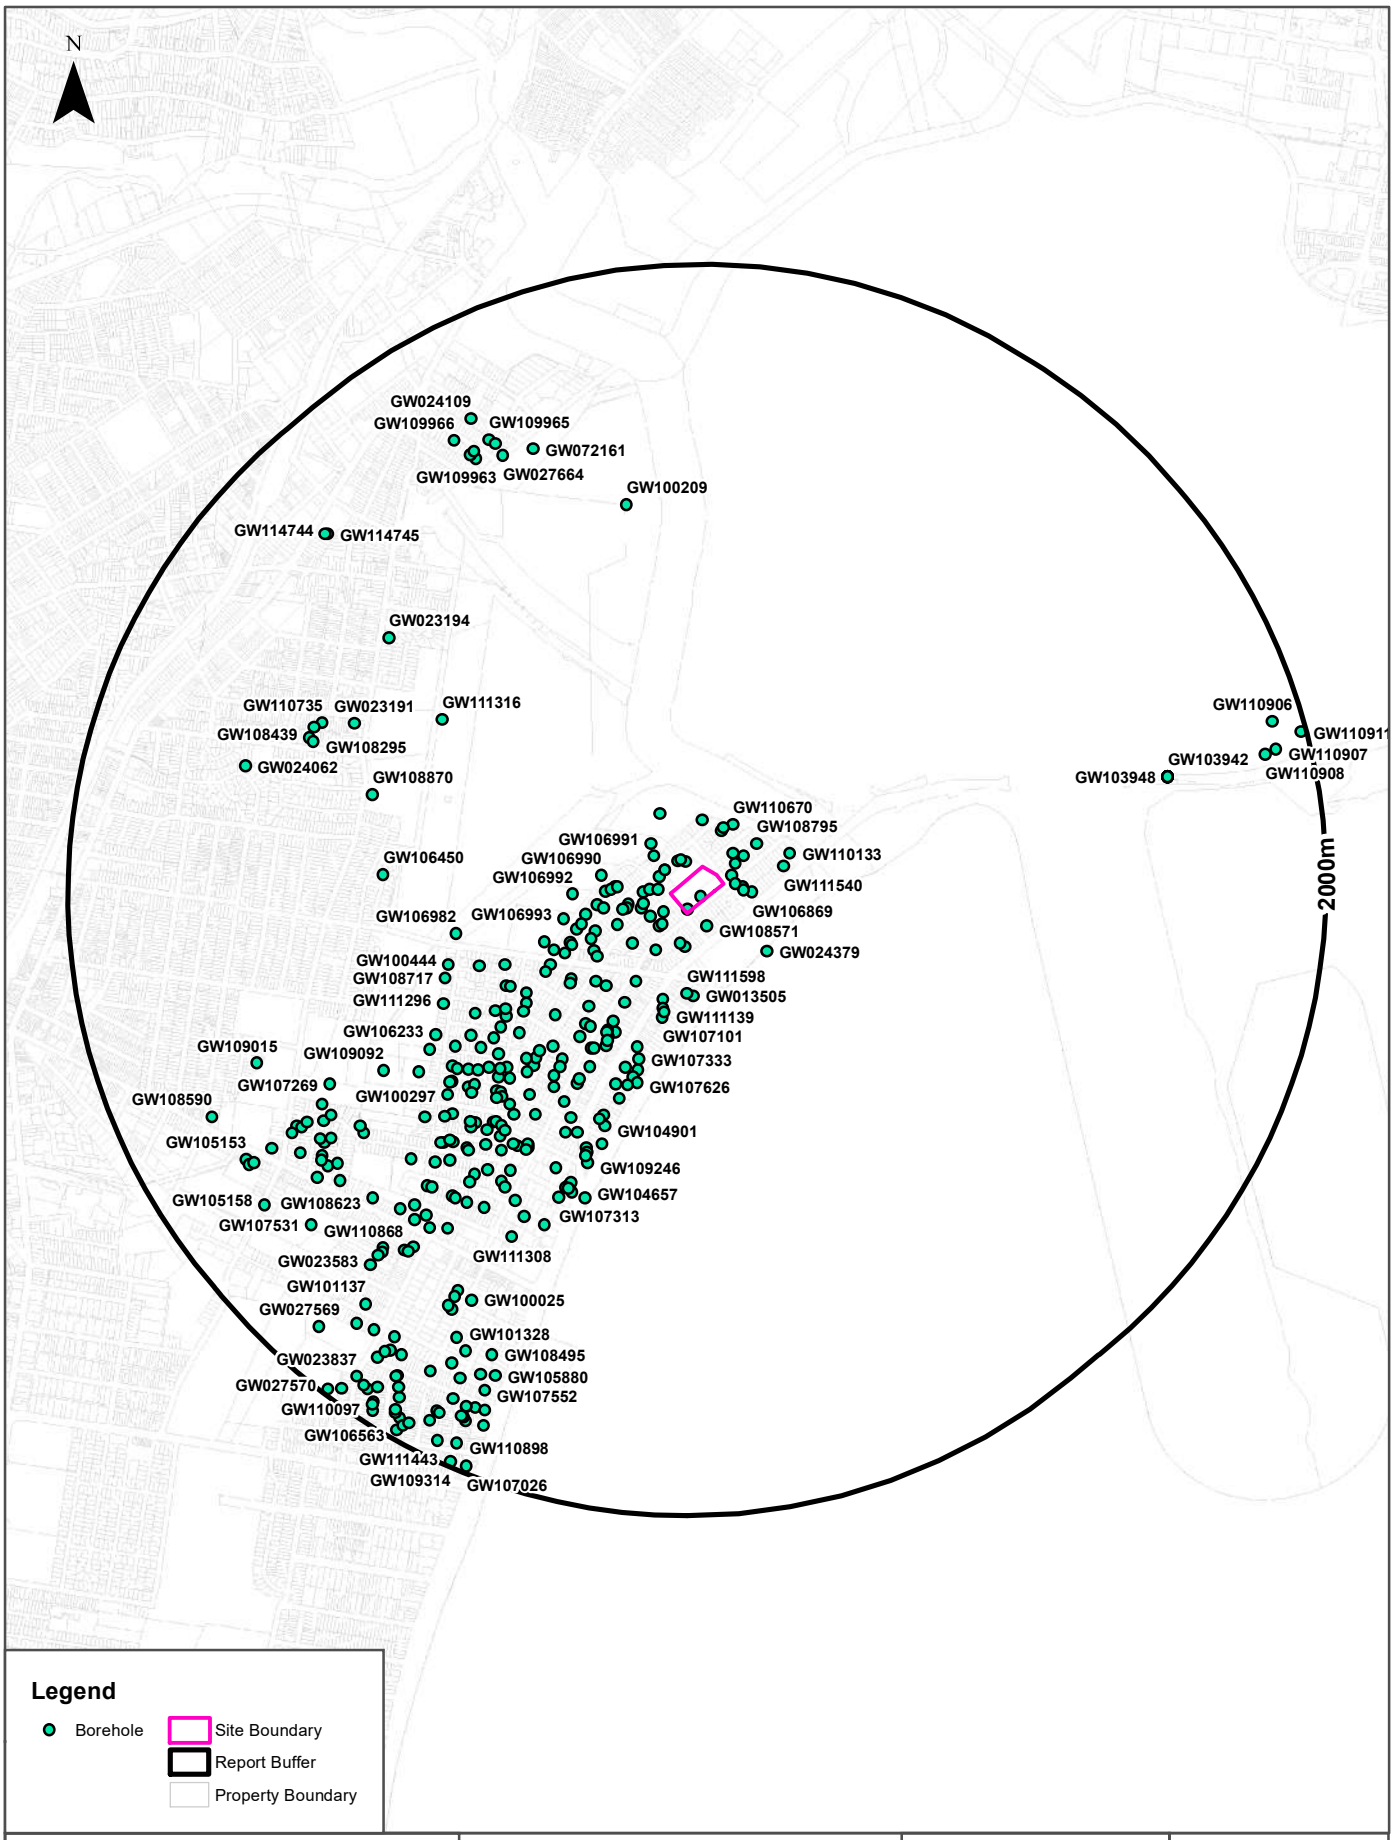
Groundwater management zones relating to the Botany Sand Beds aquifer within the dataset buffer:

Management Zone No.	Restriction	Distance	Direction
N/A	No records in buffer		

Botany Groundwater Management Zones Data Source : NSW Department of Primary Industries

Groundwater Boreholes

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216



Hydrogeology & Groundwater

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

Groundwater Boreholes

Boreholes within the dataset buffer:

Soils

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

Atlas of Australian Soils

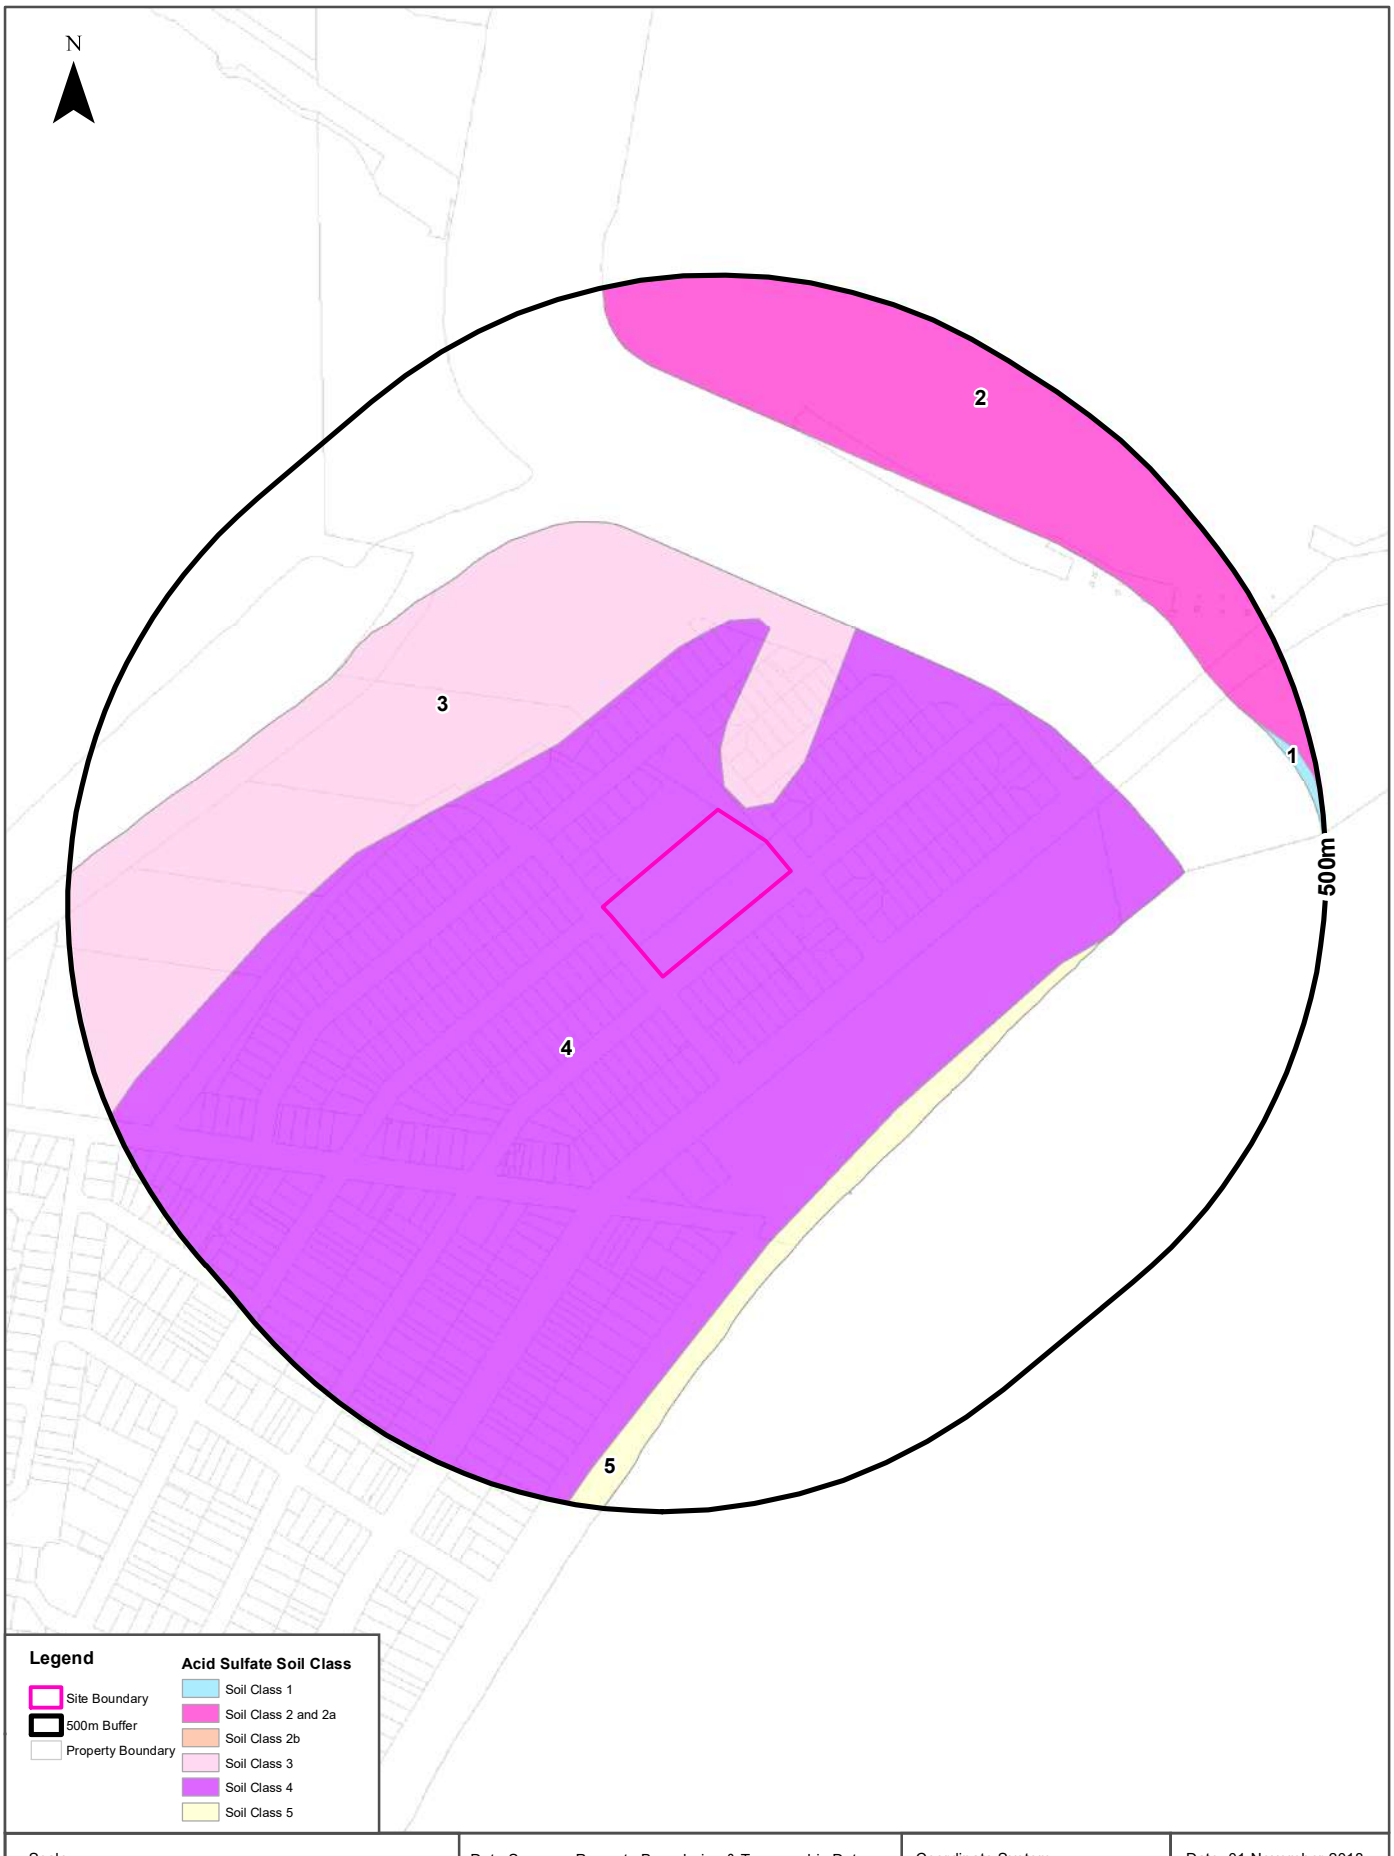
Soil mapping units and Australian Soil Classification orders within the dataset buffer:

Map Unit Code	Soil Order	Map Unit Description	Distance
Cb27	Podosol	Coastal sand plains and dunes, lagoons, and swampy areas: chief soils are leached sands (Uc2.3 and Uc2.2). Associated are dunes of siliceous sands (Uc1.2) and/or calcareous sands (Uc1.l) fringing the coastline; and swampy areas of (Uf6) soils and (Uc1.2) soils with peaty surfaces. Unit Cb27 has similarities with units Cb28 and Ca6.	0m

Acid Sulfate Soils

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216



Acid Sulfate Soils

Jacobson Avenue & Beehag Street, Kyeemagh, NSW 2216

Environmental Planning Instrument - Acid Sulfate Soils

What is the on-site Acid Sulfate Soil Plan Class that presents the largest environmental risk?

Soil Class	Description	EPI
4	Works more than 2 metres below natural ground surface present an environmental risk; Works by which the watertable is likely to be lowered more than 2 metres below natural ground surface, present an environmental risk	Rockdale Local Environmental Plan 2011

If the on-site Soil Class is 5, what other soil classes exist within 500m?

Soil Class	Description	EPI	Distance	Direction
N/A

USE OF REPORT - APPLICABLE TERMS

The following terms apply to any person (End User) who is given the Report by the person who purchased the Report from Lotsearch Pty Ltd (ABN: 89 600 168 018) (Lotsearch) or who otherwise has access to the Report (Terms). The contract terms that apply between Lotsearch and the purchaser of the Report are specified in the order form pursuant to which the Report was ordered and the terms set out below are of no effect as between Lotsearch and the purchaser of the Report.

1. End User acknowledges and agrees that:
   (a) the Report is compiled from or using content (**Third Party Content**) which is comprised of:
      (i) content provided to Lotsearch by third party content suppliers with whom Lotsearch has contractual arrangements or content which is freely available or methodologies licensed to Lotsearch by third parties with whom Lotsearch has contractual arrangements (**Third Party Content Suppliers**); and
      (ii) content which is derived from content described in paragraph (i);
   (b) Neither Lotsearch nor Third Party Content Suppliers takes any responsibility for or give any warranty in relation to the accuracy or completeness of any Third Party Content included in the Report including any contaminated land assessment or other assessment included as part of a Report;
   (c) the Third Party Content Suppliers do not constitute an exhaustive set of all repositories or sources of information available in relation to the property which is the subject of the Report (**Property**) and accordingly neither Lotsearch nor Third Party Content Suppliers gives any warranty in relation to the accuracy or completeness of the Third Party Content incorporated into the report including any contaminated land assessment or other assessment included as part of a Report;
   (d) Reports are generated at a point in time (as specified by the date/time stamp appearing on the Report) and accordingly the Report is based on the information available at that point in time and Lotsearch is not obliged to undertake any additional reporting to take into consideration any information that may become available between the point in time specified by the date/time stamp and the date on which the Report was provided by Lotsearch to the purchaser of the Report;
   (e) Reports must be used or reproduced in their entirety and End User must not reproduce or make available to other persons only parts of the Report;
   (f) Lotsearch has not undertaken any physical inspection of the property;
   (g) neither Lotsearch nor Third Party Content Suppliers warrants that all land uses or features whether past or current are identified in the Report;
   (h) the Report does not include any information relating to the actual state or condition of the Property;
   (i) the Report should not be used or taken to indicate or exclude actual fitness or unfitness of Land or Property for any particular purpose
   (j) the Report should not be relied upon for determining saleability or value or making any other decisions in relation to the Property and in particular should not be taken to be a rating or assessment of the desirability or market value of the property or its features; and
   (k) the End User should undertake its own inspections of the Land or Property to satisfy itself that there are no defects or failures
2. The End User may not make the Report or any copies or extracts of the report or any part of it available to any other person. If End User wishes to provide the Report to any other person or make extracts or copies of the Report, it must contact the purchaser of the Report before doing so to ensure the proposed use is consistent with the contract terms between Lotsearch and the purchaser.
3. Neither Lotsearch (nor any of its officers, employees or agents) nor any of its Third Party Content Suppliers will have any liability to End User or any person to whom End User provides the Report and End User must not represent that Lotsearch or any of its Third Party Content Suppliers accepts liability to any such person or make any other representation to any such person on behalf of Lotsearch or any Third Party Content Supplier.
4. The End User hereby to the maximum extent permitted by law:
   (a) acknowledges that the Lotsearch (nor any of its officers, employees or agents), nor any of its Third Party Content Supplier have any liability to it under or in connection with the

Report or these Terms;

(b) waives any right it may have to claim against Third Party Content Supplier in connection with the Report, or the negotiation of, entry into, performance of, or termination of these Terms; and

(c) releases each Third Party Content Supplier from any claim it may have otherwise had in connection with the Report, or the negotiation of, entry into, performance of, or termination of these Terms.

5. The End User acknowledges that any Third Party Supplier shall be entitled to plead the benefits conferred on it under clause 4, despite not being a party to these terms.
6. End User must not remove any copyright notices, trade marks, digital rights management information, other embedded information, disclaimers or limitations from the Report or authorise any person to do so.
7. End User acknowledges and agrees that Lotsearch and Third Party Content Suppliers retain ownership of all copyright, patent, design right (registered or unregistered), trade marks (registered or unregistered), database right or other data right, moral right or know how or any other intellectual property right in any Report or any other item, information or data included in or provided as part of a Report.
8. To the extent permitted by law and subject to paragraph 9, all implied terms, representations and warranties whether statutory or otherwise relating to the subject matter of these Terms other than as expressly set out in these Terms are excluded.
9. Subject to paragraph 6, Lotsearch excludes liability to End User for loss or damage of any kind, however caused, due to Lotsearch's negligence, breach of contract, breach of any law, in equity, under indemnities or otherwise, arising out of all acts, omissions and events whenever occurring.
10. Lotsearch acknowledges that if, under applicable State, Territory or Commonwealth law, End User is a consumer certain rights may be conferred on End User which cannot be excluded, restricted or modified. If so, and if that law applies to Lotsearch, then, Lotsearch's liability is limited to the greater of an amount equal to the cost of resupplying the Report and the maximum extent permitted under applicable laws.
11. Subject to paragraph 9, neither Lotsearch nor the End User is liable to the other for:
    (a) any indirect, incidental, consequential, special or exemplary damages arising out of or in relation to the Report or these Terms; or
    (b) any loss of profit, loss of revenue, loss of interest, loss of data, loss of goodwill or loss of business opportunities, business interruption arising directly or indirectly out of or in relation to the Report or these Terms,

    irrespective of how that liability arises including in contract or tort, liability under indemnity or for any other common law, equitable or statutory cause of action or otherwise.
12. These Terms are subject to New South Wales law.

Notes to Table:

1 - pH values >4 and <5.5 are acid and may be the result of some previous or limited oxidation of sulfides, but is not confirmatory of actual acid sulfate soils

2 - pH readings of pH≤4, indicates that actual acid sulfate soils are present with the sulfides having been oxidized in the past, resulting in acid soils (and soil pore water)

3 - The lower the final pH_{FOX} value is, the better the indication of a positive result.
» If the pH_{FOX} < 3 and there was a strong reaction to the peroxide, there is a high level of certainty of a potential acid sulfate soils. The more the pH_{FOX} drops below 3, the more positive the presence of sulfides.
» A pH_{FOX} 3-4 is less positive and laboratory analyses are needed to confirm if sulfides are present.
» For pH_{FOX} 4-5 the test is neither positive nor negative. Sulfides may be present either in small quantities and be poorly reactive under quick test field conditions.
» For pH_{FOX} >5 and little or no drop in pH from the field value, little net acid generating ability is indicated.

4 - If the pH_F value is at least one unit below field pH_{FOX}, it may indicate potential acid sulfate soils. The greater the difference between the two measurements, the more indicative the value is of a potential acid sulfate soils.

5 - coarse soils comprise sands to loamy sands - Approximate clay content (% < 0.002mm) ≤ 5%

6 - Medium soils comprise sandy loams to light clays - Approximate clay content (% < 0.002mm) between 5 and 40%

7 - Fine soils comprise medium to heavy clays and silty clays - Approximate clay content (% < 0.002mm) ≥ 40%

8 - NT - Not Tested

9 - 1.0; No reaction to slight. 2.0; Moderate reaction. 3.0; Strong reaction with persistent froth. 4.0; Extreme reaction.

Liming Rate: A Safety Factor of 1.5 has been incorporated to account for the mixing process

Acid Trail / Net Acidity - Indicates acidic soils, however may not indicate Acid Sulfate Soils

Contaminant Exceedance Indicators:

Bold	Indicates the laboratory result is within the specified range of the ASSMAC (1998) Actual Acid Sulfate Soil Indicator Values
Italics	Indicates the laboratory result either exceeds or is within the specified range of the ASSMAC (1998) Potential Acid Sulfate Soil Indicator Values
	Indicates exceedance of the ASSMAC (1998) Action Criteria triggering the need to prepare a ASS Management Plan
	Indicates the requirement for localised lime treatment of the material, that is, when the laboratory results for SCr (%w/w) > 0.03 and the SCr (mole H=/t) > 18

RPD Duplicates Acceptance Criteria is 30%
In calculating the RPD values, the following protocols are adopted:-
Where both concentrations are above laboratory reporting limits the RPD formula is used;
Where both concentrations are below the laboratory reporting limits, no RPD is calculated; and
***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins | mgt Suite B8			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Melbourne	Nov 15, 2018	14 Day
- Method: LTM-ORG-2010 TRH C6-C40			
Volatile Organics	Melbourne	Nov 15, 2018	7 Days
- Method: LTM-ORG-2150 VOCs in Soils Liquid and other Aqueous Matrices			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	Nov 15, 2018	14 Day
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	Nov 15, 2018	14 Day
- Method: LTM-ORG-2010 TRH C6-C40			
Polycyclic Aromatic Hydrocarbons	Melbourne	Nov 15, 2018	14 Day
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water			
Metals M8	Melbourne	Nov 15, 2018	28 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS			
Eurofins | mgt Suite B7			
BTEX	Melbourne	Nov 15, 2018	14 Day
- Method: LTM-ORG-2150 VOCs in Soils Liquid and other Aqueous Matrices			
Eurofins | mgt Suite B15			
Organochlorine Pesticides	Melbourne	Nov 15, 2018	14 Day
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
Organophosphorus Pesticides	Melbourne	Nov 15, 2018	14 Day
- Method: LTM-ORG-2200 Organophosphorus Pesticides by GC-MS			
Polychlorinated Biphenyls	Melbourne	Nov 15, 2018	28 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
NEPM Screen for Soil Classification			
% Clay	Brisbane	Nov 15, 2018	6 Day
- Method: LTM-GEN-7040			
Conductivity (1:5 aqueous extract at 25°C as rec.)	Melbourne	Nov 15, 2018	7 Day
- Method: LTM-INO-4030 Conductivity			
pH (units)(1:5 soil:CaCl2 extract at 25°C as rec.)	Melbourne	Nov 15, 2018	7 Day
- Method: LTM-GEN-7090 pH in soil by ISE			
Total Organic Carbon	Melbourne	Nov 17, 2018	28 Day
- Method: APHA 5310B Total Organic Carbon			
Heavy Metals	Melbourne	Nov 15, 2018	180 Day
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS			
Cation Exchange Capacity	Melbourne	Nov 16, 2018	180 Days
- Method: LTM-MET-3060 Cation Exchange Capacity by bases & Exchangeable Sodium Percentage			
% Moisture	Melbourne	Nov 12, 2018	14 Day
- Method: LTM-GEN-7080 Moisture			
Acid Sulfate Soils Field pH Test	Brisbane	Nov 12, 2018	7 Days
- Method: LTM-GEN-7060 Determination of field pH (pHF) and field pH peroxide (pHFOX) tests

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	Quality Systems Manual ver 5.1 US Department of Defense
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.1 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code
Method Blank							
Total Recoverable Hydrocarbons - 1999 NEPM Fractions

Comments

Eurofins | mgt accreditation number 1261, corporate site 1254 is currently in progress of a controlled transition to a new custom built location at 6 Monterey Road, Dandenong South, Victoria 3175. All results on this report denoted as being performed by Eurofins | mgt 2-5 Kingston Town Close, Oakleigh Victoria 3166 corporate site 1254, will have been performed on either Oakleigh or new Dandenong South site.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
Q15	The RPD reported passes Eurofins | mgt's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.
S05	Field Screen uses the following fizz rating to classify the rate the samples reacted to the peroxide: 1.0; No reaction to slight. 2.0; Moderate reaction. 3.0; Strong reaction with persistent froth. 4.0; Extreme reaction.

Attention:	Ben Withnall
Report	627289-AID
Project Name	KYEEMAGH INFANTS SCHOOL
Project ID	80818157
Received Date	Nov 12, 2018
Date Reported	Nov 21, 2018

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Project Name KYEEMAGH INFANTS SCHOOL
Project ID 80818157
Date Sampled Nov 10, 2018
Report 627289-AID

Client Sample ID	Eurofins | mgt Sample No.	Date Sampled	Sample Description	Result
TP03_0.2	18-No14957	Nov 10, 2018	Approximate Sample 678g Sample consisted of: Brown fine-grained sandy soil	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP03_1.2	18-No14958	Nov 10, 2018	Approximate Sample 709g Sample consisted of: Brown fine-grained sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP03_ASB1	18-No14959	Nov 10, 2018	Approximate Sample 116g / 100x70x5mm Sample consisted of: Grey compressed fibre cement material	Chrysotile asbestos detected.
TP19_0.1	18-No14960	Nov 10, 2018	Approximate Sample 575g Sample consisted of: Brown fine-grained sandy soil and organic debris	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP19_0.3	18-No14961	Nov 10, 2018	Approximate Sample 355g Sample consisted of: Brown fine-grained sandy soil, rocks and organic debris	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP01_0.2	18-No14962	Nov 10, 2018	Approximate Sample 363g Sample consisted of: Dark brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP02_0.1	18-No14964	Nov 10, 2018	Approximate Sample 693g Sample consisted of: Brown fine-grained sandy soil, rocks and organic debris	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP02_0.4	18-No14965	Nov 10, 2018	Approximate Sample 753g Sample consisted of: Brown fine-grained sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.

Client Sample ID	Eurofins | mgt Sample No.	Date Sampled	Sample Description	Result
TP04_0.1	18-No14966	Nov 10, 2018	Approximate Sample 729g Sample consisted of: Brown fine-grained sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP05_0.1	18-No14967	Nov 10, 2018	Approximate Sample 674g Sample consisted of: Brown fine-grained sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP06_0.1	18-No14969	Nov 10, 2018	Approximate Sample 893g Sample consisted of: Brown coarse-grained soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP07_0.1	18-No14971	Nov 10, 2018	Approximate Sample 556g Sample consisted of: Brown fine-grained sandy soil and rocks	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP09_0.3	18-No14975	Nov 10, 2018	Approximate Sample 717g Sample consisted of: Brown fine-grained sandy soil and organic debris	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP11_0.2	18-No14977	Nov 10, 2018	Approximate Sample 798g Sample consisted of: Brown fine-grained sandy soil and organic debris	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP12_0.2	18-No14979	Nov 10, 2018	Approximate Sample 629g Sample consisted of: Brown fine-grained sandy soil and organic debris	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w: weight for weight basis	grams per kilogram
Filter loading:	fibres/100 graticule areas
Reported Concentration:	fibres/mL
Flowrate:	L/min

Terms

Dry	Sample is dried by heating prior to analysis
LOR	Limit of Reporting
COC	Chain of Custody
SRA	Sample Receipt Advice
ISO	International Standards Organisation
AS	Australian Standards
WA DOH	Reference document for the NEPM. Government of Western Australia, Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia (2009), including supporting document Recommended Procedures for Laboratory Analysis of Asbestos in Soil (2011)
NEPM	National Environment Protection (Assessment of Site Contamination) Measure, 2013 (as amended)
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded and/or sound condition. For the purposes of the NEPM, ACM is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
AF	Asbestos Fines. Asbestos containing materials, including friable, weathered and bonded materials, able to pass a 7mm x 7mm sieve. Considered under the NEPM as equivalent to “non-bonded / friable”.
FA	Fibrous Asbestos. Asbestos containing materials in a friable and/or severely weathered condition. For the purposes of the NEPM, FA is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres in the matrix.

Comments

Samples No14961 & No14962 received were less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Eurofins | mgt accreditation number 1261, corporate site 1254 is currently in progress of a controlled transition to a new custom built location at 6 Monterey Road, Dandenong South, Victoria 3175. All results on this report denoted as being performed by Eurofins | mgt 2-5 Kingston Town Close, Oakleigh Victoria 3166 corporate site 1254, will have been performed on either Oakleigh or new Dandenong South site.

Sample Integrity

Custody Seals Intact (if used)	N/A

Company name:	**Cardno (NSW/ACT) Pty Ltd**
Contact name:	Ben Withnall
Project name:	KYEEMAGH INFANTS SCHOOL
Project ID:	80818157
COC number:	Not provided
Turn around time:	5 Day
Date/Time received:	Nov 12, 2018 4:31 PM
Eurofins | mgt reference:	**627289**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☑ Split sample sent to requested external lab.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Notes

Sample QA200 forwarded to ALS. Extra Jar received (BH04_0.5-0.95) placed on hold.

Contact notes

If you have any questions with respect to these samples please contact:

Nibha Vaidya on Phone : +61 (2) 9900 8415 or by e.mail: NibhaVaidya@eurofins.com

Results will be delivered electronically via e.mail to Ben Withnall - ben.withnall@cardno.com.au.

Note: A copy of these results will also be delivered to the general Cardno (NSW/ACT) Pty Ltd email address.

Certificate of Analysis

NATA Accredited
Accreditation Number 1261
Site Number 18217

Accredited for compliance with ISO/IEC 17025–Testing
The results of the tests, calibrations and/or measurements included in this document are traceable to Australian/national standards.

Attention:	Ben Withnall
Report	629407-AID
Project Name	ADDITIONAL - KYEEMAGH INFANTS SCHOOL
Project ID	80818157
Received Date	Nov 22, 2018
Date Reported	Nov 29, 2018

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Project Name ADDITIONAL - KYEEMAGH INFANTS SCHOOL
Project ID 80818157
Date Sampled Nov 10, 2018
Report 629407-AID

Client Sample ID	Eurofins | mgt Sample No.	Date Sampled	Sample Description	Result
TP04_0.4	18-No31520	Nov 10, 2018	Approximate Sample 816 Sample consisted of: Gray coarse-grained sandy soil	ACM: Chrysotile asbestos detected in fibre cement fragments. Approximate raw weight of ACM = 16g Total estimated asbestos content in ACM = 1.6g* Total estimated asbestos concentration in ACM = 0.19% w/w* Organic fibre detected. No respirable fibres detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w: weight for weight basis	grams per kilogram
Filter loading:	fibres/100 graticule areas
Reported Concentration:	fibres/mL
Flowrate:	L/min

Terms

Dry	Sample is dried by heating prior to analysis
LOR	Limit of Reporting
COC	Chain of Custody
SRA	Sample Receipt Advice
ISO	International Standards Organisation
AS	Australian Standards
WA DOH	Reference document for the NEPM. Government of Western Australia, Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia (2009), including supporting document Recommended Procedures for Laboratory Analysis of Asbestos in Soil (2011)
NEPM	National Environment Protection (Assessment of Site Contamination) Measure, 2013 (as amended)
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded and/or sound condition. For the purposes of the NEPM, ACM is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
AF	Asbestos Fines. Asbestos containing materials, including friable, weathered and bonded materials, able to pass a 7mm x 7mm sieve. Considered under the NEPM as equivalent to “non-bonded / friable”.
FA	Fibrous Asbestos. Asbestos containing materials in a friable and/or severely weathered condition. For the purposes of the NEPM, FA is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres in the matrix.

Comments

Eurofins | mgt accreditation number 1261, corporate site 1254 is currently in progress of a controlled transition to a new custom built location at 6 Monterey Road, Dandenong South, Victoria 3175. All results on this report denoted as being performed by Eurofins | mgt 2-5 Kingston Town Close, Oakleigh Victoria 3166 corporate site 1254, will have been performed on either Oakleigh or new Dandenong South site.

Sample Integrity

Custody Seals Intact (if used)	N/A

Subject: Report 627289 : Site KYEEMAGH INFANTS SCHOOL (80818157) - TP04_0.4 ASB analysis

EXTERNAL EMAIL*

Hello Nibha,

Sorry to bug you again! Going through my notes from the other weekends field work it looks as though there was piece of FC in the ASB bag taken for TP04_0.4. Could we please have this sample analysed? I have attached the relevant COC. Thanks a million!

Kind regards,

Joel Griffiths

Eurofins | mgt reference:	**629407**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☒ Split sample sent to requested external lab.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

If you have any questions with respect to these samples please contact:

Nibha Vaidya on Phone : +61 (2) 9900 8415 or by e.mail: NibhaVaidya@eurofins.com

Results will be delivered electronically via e.mail to Ben Withnall - ben.withnall@cardno.com.au.

Note: A copy of these results will also be delivered to the general Cardno (NSW/ACT) Pty Ltd email address.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Celine Conceicao	Senior Spectroscopist	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.

Sampler	: Joel Griffiths		
Site	: ----		
Quote number	: EN/222 - Secondary Work		
No. of samples received	: 1		
No. of samples analysed	: 1		

ilac-MRA NATA
Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Celine Conceicao	Senior Spectroscopist	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

				Method Blank (MB) Report	Laboratory Control Spike (LCS) Report

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES1833866**	Page	: 1 of 6
Client	: **CARDNO (NSW/ACT) PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: MR BEN WITHNALL	Telephone	: +61-2-8784 8555
Project	: 80818157 Kyeemagh Infants School	Date Samples Received	: 13-Nov-2018
Site	: ----	Issue Date	: 19-Nov-2018
Sampler	: Joel Griffiths	No. of samples received	: 1
Order number	:	No. of samples analysed	: 1

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
Polychlorinated Biphenyls (PCB)	EP066	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 504)
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270D Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM (2013) Schedule B(3) (Method 504,505)
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015A Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM amended 2013.
Volatile Organic Compounds	EP074	SOIL	In house: Referenced to USEPA SW 846 - 8260B Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 501)
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270D. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 502 and 507)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260B. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM amended 2013.

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (2013) Schedule B(3) (Method 202)
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.

Preparation Methods	Method	Matrix	Method Descriptions
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins | mgt Suite B8			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Melbourne	Nov 23, 2018	14 Day
- Method: LTM-ORG-2010 TRH C6-C40			
Volatile Organics	Melbourne	Nov 23, 2018	7 Days
- Method: LTM-ORG-2150 VOCs in Soils Liquid and other Aqueous Matrices			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	Nov 23, 2018	14 Day
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Melbourne	Nov 23, 2018	14 Day
- Method: LTM-ORG-2010 TRH C6-C40			
Polycyclic Aromatic Hydrocarbons	Melbourne	Nov 23, 2018	14 Day
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water			
Metals M8	Melbourne	Nov 23, 2018	28 Days
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS			
Eurofins | mgt Suite B7			
BTEX	Melbourne	Nov 23, 2018	14 Day
- Method: LTM-ORG-2150 VOCs in Soils Liquid and other Aqueous Matrices			
Eurofins | mgt Suite B15			
Organochlorine Pesticides	Melbourne	Nov 23, 2018	14 Day
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
Organophosphorus Pesticides	Melbourne	Nov 23, 2018	14 Day
- Method: LTM-ORG-2200 Organophosphorus Pesticides by GC-MS			
Polychlorinated Biphenyls	Melbourne	Nov 23, 2018	28 Days
- Method: LTM-ORG-2220 OCP & PCB in Soil and Water			
Acid Sulfate Soils Field pH Test	Brisbane	Nov 19, 2018	7 Days
- Method: LTM-GEN-7060 Determination of field pH (pHF) and field pH peroxide (pHFOX) tests			
% Moisture	Melbourne	Nov 19, 2018	14 Day
- Method: LTM-GEN-7080 Moisture

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	Quality Systems Manual ver 5.1 US Department of Defense
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.1 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Comments

Eurofins | mgt accreditation number 1261, corporate site 1254 is currently in progress of a controlled transition to a new custom built location at 6 Monterey Road, Dandenong South, Victoria 3175. All results on this report denoted as being performed by Eurofins | mgt 2-5 Kingston Town Close, Oakleigh Victoria 3166 corporate site 1254, will have been performed on either Oakleigh or new Dandenong South site.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
R20	This sample is a Trip Spike and therefore all results are reported as a percentage
S05	Field Screen uses the following fizz rating to classify the rate the samples reacted to the peroxide: 1.0; No reaction to slight. 2.0; Moderate reaction. 3.0; Strong reaction with persistent froth. 4.0; Extreme reaction.

Attention:	Ben Withnall
Report	628416-AID
Project Name	KYEEMAGH INFANTS SCHOOL
Project ID	80818157
Received Date	Nov 19, 2018
Date Reported	Nov 27, 2018

Methodology:

Asbestos Fibre Identification	Conducted in accordance with the Australian Standard AS 4964 – 2004: Method for the Qualitative Identification of Asbestos in Bulk Samples and in-house Method LTM-ASB-8020 by polarised light microscopy (PLM) and dispersion staining (DS) techniques. *NOTE: Positive Trace Analysis results indicate the sample contains detectable respirable fibres.*
Unknown Mineral Fibres	Mineral fibres of unknown type, as determined by PLM with DS, may require another analytical technique, such as Electron Microscopy, to confirm unequivocal identity. *NOTE: While Actinolite, Anthophyllite and Tremolite asbestos may be detected by PLM with DS, due to variability in the optical properties of these materials, AS4964 requires that these are reported as UMF unless confirmed by an independent technique.*
Subsampling Soil Samples	The whole sample submitted is first dried and then passed through a 10mm sieve followed by a 2mm sieve. All fibrous matter greater than 10mm, greater than 2mm as well as the material passing through the 2mm sieve are retained and analysed for the presence of asbestos. If the sub 2mm fraction is greater than approximately 30 to 60g then a sub-sampling routine based on ISO 3082:2009(E) is employed. *NOTE: Depending on the nature and size of the soil sample, the sub-2 mm residue material may need to be sub-sampled for trace analysis, in accordance with AS 4964-2004.*
Bonded asbestos-containing material (ACM)	The material is first examined and any fibres isolated for identification by PLM and DS. Where required, interfering matrices may be removed by disintegration using a range of heat, chemical or physical treatments, possibly in combination.The resultant material is then further examined in accordance with AS 4964 - 2004. *NOTE: Even after disintegration it may be difficult to detect the presence of asbestos in some asbestos-containing bulk materials using PLM and DS. This is due to the low grade or small length or diameter of the asbestos fibres present in the material, or to the fact that very fine fibres have been distributed intimately throughout the materials. Vinyl/asbestos floor tiles, some asbestos-containing sealants and mastics, asbestos-containing epoxy resins and some ore samples are examples of these types of material, which are difficult to analyse.*
Limit of Reporting	The performance limitation of the AS 4964 (2004) method for non-homogeneous samples is around 0.1 g/kg (equivalent to 0.01% (w/w)). Where no asbestos is found by PLM and DS, including Trace Analysis, this is considered to be at the nominal reporting limit of 0.01% (w/w). The NEPM screening level of 0.001% (w/w) is intended as an on-site determination, not a laboratory Limit of Reporting (LOR), per se. Examination of a large sample size (e.g. 500 mL) may improve the likelihood of detecting asbestos, particularly AF, to aid assessment against the NEPM criteria. Gravimetric determinations to this level of accuracy are outside of AS 4964 and hence NATA Accreditation does not cover the performance of this service (non-NATA results shown with an asterisk). *NOTE: NATA News March 2014, p.7, states in relation to AS 4964: "This is a qualitative method with a nominal reporting limit of 0.01 % " and that currently in Australia "there is no validated method available for the quantification of asbestos".This report is consistent with the analytical procedures and reporting recommendations in the NEPM and the WA DoH.*

Project Name KYEEMAGH INFANTS SCHOOL

Date Sampled Nov 17, 2018
Report 628416-AID

Client Sample ID	Eurofins | mgt Sample No.	Date Sampled	Sample Description	Result
TP13_0.1	18-No24227	Nov 17, 2018	Approximate Sample 958g Sample consisted of: Grey fine-grained sandy soil	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP13_0.4	18-No24228	Nov 17, 2018	Approximate Sample 810g Sample consisted of: Grey fine-grained sandy soil and organic debris	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP14_0.1	18-No24229	Nov 17, 2018	Approximate Sample 729g Sample consisted of: Grey fine-grained sandy soil and organic debris	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP17_0.1	18-No24235	Nov 17, 2018	Approximate Sample 705g Sample consisted of: Grey fine-grained sandy soil and organic debris	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP18_0.1	18-No24237	Nov 17, 2018	Approximate Sample 686g Sample consisted of: Grey fine-grained sandy soil	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
TP20_0.1	18-No24239	Nov 17, 2018	Approximate Sample 727g Sample consisted of: Grey fine-grained sandy soil	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.
ASB2	18-No24241	Nov 17, 2018	Approximate Sample 22g / 90x40x5mm Sample consisted of: Grey fibre cement fragments	Chrysotile, amosite and crocidolite asbestos detected.
BH02_0.5	18-No24245	Nov 17, 2018	Approximate Sample 553g Sample consisted of: Grey fine-grained sandy soil	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.

Client Sample ID	Eurofins | mgt Sample No.	Date Sampled	Sample Description	Result
BH03_0.5	18-No24247	Nov 17, 2018	Approximate Sample 383g Sample consisted of: Brown fine-grained sandy soil	No asbestos detected at the reporting limit of 0.001% w/w.* Organic fibre detected. No respirable fibres detected.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Asbestos - LTM-ASB-8020	Sydney	Nov 19, 2018	Indefinite

Internal Quality Control Review and Glossary

General

1. QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. Samples were analysed on an 'as received' basis.
4. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the Sample Receipt Advice.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

Units

% w/w: weight for weight basis	grams per kilogram
Filter loading:	fibres/100 graticule areas
Reported Concentration:	fibres/mL
Flowrate:	L/min

Terms

Dry	Sample is dried by heating prior to analysis
LOR	Limit of Reporting
COC	Chain of Custody
SRA	Sample Receipt Advice
ISO	International Standards Organisation
AS	Australian Standards
WA DOH	Reference document for the NEPM. Government of Western Australia, Guidelines for the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia (2009), including supporting document Recommended Procedures for Laboratory Analysis of Asbestos in Soil (2011)
NEPM	National Environment Protection (Assessment of Site Contamination) Measure, 2013 (as amended)
ACM	Asbestos Containing Materials. Asbestos contained within a non-asbestos matrix, typically presented in bonded and/or sound condition. For the purposes of the NEPM, ACM is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
AF	Asbestos Fines. Asbestos containing materials, including friable, weathered and bonded materials, able to pass a 7mm x 7mm sieve. Considered under the NEPM as equivalent to “non-bonded / friable”.
FA	Fibrous Asbestos. Asbestos containing materials in a friable and/or severely weathered condition. For the purposes of the NEPM, FA is generally restricted to those materials that do not pass a 7mm x 7mm sieve.
Friable	Asbestos-containing materials of any size that may be broken or crumbled by hand pressure. For the purposes of the NEPM, this includes both AF and FA. It is outside of the laboratory’s remit to assess degree of friability.
Trace Analysis	Analytical procedure used to detect the presence of respirable fibres in the matrix.

Comments

No24247: Sample received was less than the nominal 500mL as recommended in Section 4.10 of the NEPM Schedule B1 - Guideline on Investigation Levels for Soil and Groundwater.

Eurofins | mgt accreditation number 1261, corporate site 1254 is currently in progress of a controlled transition to a new custom built location at 6 Monterey Road, Dandenong South, Victoria 3175. All results on this report denoted as being performed by Eurofins | mgt 2-5 Kingston Town Close, Oakleigh Victoria 3166 corporate site 1254, will have been performed on either Oakleigh or new Dandenong South site.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins | mgt Suite B8			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Melbourne	Nov 21, 2018	7 Day

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	Quality Systems Manual ver 5.1 US Department of Defense
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.1 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code

Comments

Eurofins | mgt accreditation number 1261, corporate site 1254 is currently in progress of a controlled transition to a new custom built location at 6 Monterey Road, Dandenong South, Victoria 3175. All results on this report denoted as being performed by Eurofins | mgt 2-5 Kingston Town Close, Oakleigh Victoria 3166 corporate site 1254, will have been performed on either Oakleigh or new Dandenong South site.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
Q15	The RPD reported passes Eurofins | mgt's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Sample Receipt Advice

Company name: **Cardno (NSW/ACT) Pty Ltd**

Contact name: Ben Withnall
Project name: KYEEMAGH INFANTS SCHOOL
Project ID: 80818157
COC number: Not provided
Turn around time: 5 Day
Date/Time received: Nov 19, 2018 2:52 PM
Eurofins | mgt reference: **628416**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☑ Sample containers for volatile analysis received with zero headspace.

☑ Split sample sent to requested external lab.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Notes

Sample QA400 forwarded to ALS.

Contact notes

If you have any questions with respect to these samples please contact:

Nibha Vaidya on Phone : +61 (2) 9900 8415 or by e.mail: NibhaVaidya@eurofins.com

Results will be delivered electronically via e.mail to Ben Withnall - ben.withnall@cardno.com.au.

Note: A copy of these results will also be delivered to the general Cardno (NSW/ACT) Pty Ltd email address.

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES1834552**	Page	: 1 of 4
Client	: **CARDNO (NSW/ACT) PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: MR BEN WITHNALL	Telephone	: +61-2-8784 8555
Project	: 80818157 Kyeemagh Infants School	Date Samples Received	: 20-Nov-2018
Site	: ----	Issue Date	: 27-Nov-2018
Sampler	: JOEL GRIFFITHS	No. of samples received	: 1
Order number	:	No. of samples analysed	: 1

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation			Analysis		
		Date extracted	Due for extraction	Evaluation	Date analysed	Due for analysis	Evaluation

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM (2013) Schedule B(3) Section 7.1 and Table 1 (14 day holding time).
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM (2013) Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015A Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM amended 2013.
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270D. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3) (Method 502 and 507)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260B. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM amended 2013.

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM (2013) Schedule B(3) (Method 202)
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	Quality Systems Manual ver 5.1 US Department of Defense
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.1 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Eurofins | mgt accreditation number 1261, corporate site 1254 is currently in progress of a controlled transition to a new custom built location at 6 Monterey Road, Dandenong South, Victoria 3175. All results on this report denoted as being performed by Eurofins | mgt 2-5 Kingston Town Close, Oakleigh Victoria 3166 corporate site 1254, will have been performed on either Oakleigh or new Dandenong South site.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
S01	Liming rate is calculated and reported on a dry weight basis assuming use of fine agricultural lime (CaCO3) and using a safety factor of 1.5 to allow for non-homogeneous mixing and poor reactivity of lime. For conversion of Liming Rate from 'kg/t dry weight' to 'kg/m3 in-situ soil' multiply 'reported results' x 'wet bulk density of soil in t/m3'
S02	Retained Acidity is Reported when the pHKCl is less than pH 4.5
S03	Acid Neutralising Capacity is only required if the pHKCl if greater than or equal to pH 6.5
S04	Acid Sulfate Soil Samples have a 24 hour holding time unless frozen or dried within that period

Sample Receipt Advice

Company name: **Cardno (NSW/ACT) Pty Ltd**

Contact name: Ben Withnall
Project name: KYEEMAGH INFANTS SCHOOL
Project ID: 80818157
COC number: Not provided
Turn around time: 5 Day
Date/Time received: Nov 28, 2018 3:45 PM
Eurofins | mgt reference: **630561**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☒ Split sample sent to requested external lab.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

If you have any questions with respect to these samples please contact:

Nibha Vaidya on Phone : +61 (2) 9900 8415 or by e.mail: NibhaVaidya@eurofins.com

Results will be delivered electronically via e.mail to Ben Withnall - ben.withnall@cardno.com.au.

Note: A copy of these results will also be delivered to the general Cardno (NSW/ACT) Pty Ltd email address.

Cardno (NSW/ACT) Pty Ltd
Level 9, 203 Pacific Highway
St Leonards
NSW 2065

NATA Accredited
Accreditation Number 1261
Site Number 20794

Accredited for compliance with ISO/IEC 17025 – Testing
The results of the tests, calibrations and/or measurements included in this document are traceable to Australian/national standards.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	Quality Systems Manual ver 5.1 US Department of Defense
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.1 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Comments

Eurofins | mgt accreditation number 1261, corporate site 1254 is currently in progress of a controlled transition to a new custom built location at 6 Monterey Road, Dandenong South, Victoria 3175. All results on this report denoted as being performed by Eurofins | mgt 2-5 Kingston Town Close, Oakleigh Victoria 3166 corporate site 1254, will have been performed on either Oakleigh or new Dandenong South site.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
S01	Liming rate is calculated and reported on a dry weight basis assuming use of fine agricultural lime (CaCO3) and using a safety factor of 1.5 to allow for non-homogeneous mixing and poor reactivity of lime. For conversion of Liming Rate from 'kg/t dry weight' to 'kg/m3 in-situ soil' multiply 'reported results' x 'wet bulk density of soil in t/m3'
S02	Retained Acidity is Reported when the pHKCl is less than pH 4.5
S03	Acid Neutralising Capacity is only required if the pHKCl if greater than or equal to pH 6.5
S04	Acid Sulfate Soil Samples have a 24 hour holding time unless frozen or dried within that period

EXTERNAL EMAIL*

Hi Nibha,

Happy Friday! For lab report 627289 for our job 80818157 Kyeemagh I've attached an additional analysis request for SPOCAS and CRS on some samples we had pHFOX done on.

Thanks very much.

Sample Receipt Advice

Company name: **Cardno (NSW/ACT) Pty Ltd**

Contact name: Ben Withnall
Project name: KYEEMAGH INFANTS SCHOOL
Project ID: 80818157
COC number: Not provided
Turn around time: 5 Day
Date/Time received: Nov 23, 2018 12:00 PM
Eurofins | mgt reference: **629911**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☒ Split sample sent to requested external lab.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Contact notes

If you have any questions with respect to these samples please contact:

Nibha Vaidya on Phone : +61 (2) 9900 8415 or by e.mail: NibhaVaidya@eurofins.com

Results will be delivered electronically via e.mail to Ben Withnall - ben.withnall@cardno.com.au.

Note: A copy of these results will also be delivered to the general Cardno (NSW/ACT) Pty Ltd email address.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction and analysis is reported.
A recent review of our LIMS has resulted in the correction or clarification of some method identifications. Due to this, some of the method reference information on reports has changed. However, no substantive change has been made to our laboratory methods, and as such there is no change in the validity of current or previous results (regarding both quality and NATA accreditation).

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Eurofins | mgt Suite B8 (filtered metals)			
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Sydney	Nov 26, 2018	7 Day
- Method: LTM-ORG-2010 TRH C6-C40			
Volatile Organics	Sydney	Nov 26, 2018	7 Days
- Method: LTM-ORG-2150 VOCs in Soils Liquid and other Aqueous Matrices			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Sydney	Nov 26, 2018	7 Day
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Sydney	Nov 26, 2018	7 Day
- Method: LTM-ORG-2010 TRH C6-C40			
Polycyclic Aromatic Hydrocarbons	Sydney	Nov 26, 2018	7 Days
- Method: LTM-ORG-2130 PAH and Phenols in Soil and Water			
Metals M8 filtered	Sydney	Nov 26, 2018	28 Day
- Method: LTM-MET-3040 Metals in Waters, Soils & Sediments by ICP-MS			
Per- and Polyfluoroalkyl Substances (PFASs)			
Perfluoroalkyl carboxylic acids (PFCAs)	Brisbane	Nov 28, 2018	14 Day
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
Perfluoroalkyl sulfonamido substances	Brisbane	Nov 28, 2018	14 Day
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
Perfluoroalkyl sulfonic acids (PFSAs)	Brisbane	Nov 28, 2018	14 Day
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)			
n:2 Fluorotelomer sulfonic acids (n:2 FTSAs)	Brisbane	Nov 28, 2018	14 Day
- Method: LTM-ORG-2100 Per- and Polyfluoroalkyl Substances (PFAS)

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

****NOTE:** pH duplicates are reported as a range NOT as RPD

Units

mg/kg: milligrams per kilogram

mg/L: milligrams per litre

ug/L: micrograms per litre

ppm: Parts per million

ppb: Parts per billion

%: Percentage

org/100mL: Organisms per 100 millilitres

NTU: Nephelometric Turbidity Units

MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	Quality Systems Manual ver 5.1 US Department of Defense
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient

QC - Acceptance Criteria

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR : No Limit

Results between 10-20 times the LOR : RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

Surrogate Recoveries: Recoveries must lie between 50-150%-Phenols & PFASs

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.1 where no positive PFAS results have been reported have been reviewed and no data was affected.

WA DWER (n=10): PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Organochlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling.Therefore laboratory analysis is unlikely to be completed within holding time. Analysis will begin as soon as possible after sample receipt.
7. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
8. Polychlorinated Biphenyls are spiked only using Aroclor 1260 in Matrix Spikes and LCS.
9. For Matrix Spikes and LCS results a dash " -" in the report means that the specific analyte was not added to the QC sample.
10. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Comments

Eurofins | mgt accreditation number 1261, corporate site 1254 is currently in progress of a controlled transition to a new custom built location at 6 Monterey Road, Dandenong South, Victoria 3175. All results on this report denoted as being performed by Eurofins | mgt 2-5 Kingston Town Close, Oakleigh Victoria 3166 corporate site 1254, will have been performed on either Oakleigh or new Dandenong South site.

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
N09	Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).

Sample Receipt Advice

Company name: **Cardno (NSW/ACT) Pty Ltd**

Contact name: Ben Withnall
Project name: KYEEMAGH INFANTS SCHOOL
Project ID: 80818157
COC number: Not provided
Turn around time: 5 Day
Date/Time received: Nov 23, 2018 5:43 PM
Eurofins | mgt reference: **629653**

Sample information

☑ A detailed list of analytes logged into our LIMS, is included in the attached summary table.

☑ All samples have been received as described on the above COC.

☑ COC has been completed correctly.

☑ Attempt to chill was evident.

☑ Appropriately preserved sample containers have been used.

☑ All samples were received in good condition.

☑ Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.

☑ Appropriate sample containers have been used.

☑ Sample containers for volatile analysis received with zero headspace.

☑ Split sample sent to requested external lab.

☒ Some samples have been subcontracted.

N/A Custody Seals intact (if used).

Notes

QA200 forwarded to ALS

Contact notes

If you have any questions with respect to these samples please contact:

Nibha Vaidya on Phone : +61 (2) 9900 8415 or by e.mail: NibhaVaidya@eurofins.com

Results will be delivered electronically via e.mail to Ben Withnall - ben.withnall@cardno.com.au.

Note: A copy of these results will also be delivered to the general Cardno (NSW/ACT) Pty Ltd email address.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Celine Conceicao	Senior Spectroscopist	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Franco Lentini		Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero.

ilac-MRA NATA
Accreditation No. 825
Accredited for compliance with ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Celine Conceicao	Senior Spectroscopist	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Franco Lentini		Sydney Organics, Smithfield, NSW

General Comments

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **WATER**

Method Blank (MB) and Laboratory Control Spike (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Spike (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES1835239**	Page	: 1 of 6
Client	: **CARDNO (NSW/ACT) PTY LTD**	Laboratory	: Environmental Division Sydney
Contact	: MR BEN WITHNALL	Telephone	: +61-2-8784 8555
Project	: KYEEMAGH INFANTS SCHOOL 80818157	Date Samples Received	: 26-Nov-2018
Site	: ----	Issue Date	: 03-Dec-2018
Sampler	: JOEL GRIFFITHS	No. of samples received	: 1
Order number	:	No. of samples analysed	: 1

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **NO Quality Control Sample Frequency Outliers exist.**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. Samples are 0.45µm filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Dissolved Mercury by FIMS	EG035F	WATER	In house: Referenced to AS 3550, APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) Samples are 0.45µm filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
TRH - Semivolatile Fraction	EP071	WATER	In house: Referenced to USEPA SW 846 - 8015A The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with the QC requirements of NEPM (2013) Schedule B(3)
Volatile Organic Compounds	EP074	WATER	In house: Referenced to USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
PAH/Phenols (GC/MS - SIM)	EP075(SIM)	WATER	In house: Referenced to USEPA SW 846 - 8270D Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM (2013) Schedule B(3)
TRH Volatiles/BTEX	EP080	WATER	In house: Referenced to USEPA SW 846 - 8260B Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. Alternatively, a sample is equilibrated in a headspace vial and a portion of the headspace determined by GCMS analysis. This method is compliant with the QC requirements of NEPM (2013) Schedule B(3)
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In house: Direct injection analysis of fresh waters after dilution (1:1) with methanol. Analysis by LC-Electrospray-MS-MS, Negative Mode using MRM. Where commercially available, isotopically labelled analogues of the target analytes are used as internal standards for quantification. Where a labelled analogue is not commercially available, the internal standard with similar chemistry and the closest retention time to the target is used for quantification. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. This method complies with the quality control definitions as stated in QSM 5.1. Data is reviewed in line with the DQOs as stated in QSM5.1

Preparation Methods	Method	Matrix	Method Descriptions
Preparation for PFAS in water.	EP231-PR	WATER	Method presumes direct injection without workup. Preparation includes addition of internal standard and surrogate, and filtration prior to anaylsis.

Preparation Methods	Method	Matrix	Method Descriptions
Separatory Funnel Extraction of Liquids	ORG14	WATER	In house: Referenced to USEPA SW 846 - 3510B 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using 60mL DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM (2013) Schedule B(3) . ALS default excludes sediment which may be resident in the container.
Volatiles Water Preparation	ORG16-W	WATER	A 5 mL aliquot or 5 mL of a diluted sample is added to a 40 mL VOC vial for sparging.

APPENDIX

G

QA/QC REPORT

Quality Control / Quality Assurance Report

Quality Assurance/Quality Control (QA/QC) procedures were implemented to ensure the precision accuracy, representativeness, completeness and comparability of all data gathered. The QA/QC procedures included:

- Equipment calibration to ensure field measurements obtained are accurate;
- Equipment decontamination to prevent cross contamination;
- The completion of a log for each soil bore;
- Use of appropriate measures (i.e. gloves) to prevent cross contamination;
- Appropriate sample identification;
- Collection and analysis of duplicate samples for QA/QC purposes;
- Correct sample preservation;
- Sample transport with Chain of Custody (COC) documentation; and
- Laboratory analysis in accordance with NATA accredited methods.

Table G-1 details the QA/QC procedures and sample collection details undertaken through the elements of the investigation. **Table G-2** summarises the number of QA/QC samples collected during this investigation. Copies of all the COCs, along with the Sample Receipt Notifications (SRNs), Interpretive QA/QC Reports are provided in **Appendix F**.

Table G-1 Field QA/QC Method Validation

Requirement	Yes/No	Comments
Equipment calibration	Yes	Calibration certificates are presented at the end of this Appendix.
Equipment decontamination	Yes	Decontamination of sampling equipment (hand auger and solid flight) was undertaken by washing with phosphate free detergent (Liquinox) followed by a rinse with potable water.
Soil logging	Yes	All intrusive locations and soil samples collected were logged in accordance with the Unified Soil Classification System. Borehole logs provided in **Appendix E**.
Sample collection	Yes	Samples were collected using disposable nitrile gloves and placed directly into appropriate sample jars and resealable bags provided by the laboratory. A clean pair of gloves was used for each new sample being collected to limit the possibility of cross-contamination.
Sample identification	Yes	All samples were marked with a unique identifier including project number, sample location, depth and date.
QA/QC sample collection	Yes	Two soil duplicate samples were collected for intra-lab QA/QC purposes with a further two triplicate soil samples collected to monitor the quality of the field practices for sample collection. Cardno based the investigation around a rate of one duplicate sample per 20 primary samples as the requirement for duplicate sample collection.
Sample preservation	Yes	Samples were placed in a chilled ice box with ice for storage and transport to the laboratory. Samples for ASS analysis were frozen following field works.
COC documentation	Yes	A COC form was completed by Cardno detailing sample identification, collection date, sampler and laboratory analysis required. The COC form was signed off and returned to Cardno by the laboratory staff upon receipt of all the samples. COC forms and Sample Receipt Notification (SRN) are provided in **Appendix F**. The SRN indicates that the samples were received at the laboratory intact and chilled and within the required holding times. Outliers present on the SRNs were addressed with the laboratory.
NATA accredited methods	Yes	Eurofins mgt, a NATA accredited laboratory analysed the samples in accordance with NATA accredited methods. Inter-lab QAQC samples were analysed at ALS Environmental Services. Analytical methods used are indicated in the stamped laboratory results provided in **Appendix F**.

Table G-2 Field QA/QC Collection Summary

Investigation Element	Date	Sample Type and Number of Samples					
		Primary	Duplicate	Split (Triplicate)	Trip blank	Field blank	Rinsate
Soil	10/11/2018 17/11/2018	41	2	2	1	1	1
Groundwater	23/11/2018	3	1	1	-	-	-

Relative Percentage Difference Determination

Laboratory results for duplicate and triplicate samples are assessed using a determination of the Relative Percentage Difference (RPD). Where a primary sample and a duplicate sample are compared, the RPD provides an indication of the reproducibility of the results, which incorporates the sampling method. Where a primary sample and a split sample are compared, the RPD provides an indication of the accuracy of the primary laboratory results as compared to the secondary laboratory result.

The calculation used to determine the RPD is:

$$RPD = \frac{(Co - Cs)}{\left(\frac{Co + Cs}{2}\right)} x100$$

Where:

Co = Concentration of the original sample

Cs = Concentration of the duplicate sample

In calculating the RPD values the following protocols were adopted:

- Where both concentrations are above laboratory reporting limits the RPD formula is used;
- Where both concentrations are below the laboratory reporting limits, no RPD is calculated; and
- Where one or both sample concentrations are reported to be less than ten times (<10x) the laboratory reporting limit, the RPD is calculated but is not assessed against the adopted criterion.

In accordance with the Australian Standard 4482.1-2005 (Standards Australia, 2005), Cardno adopts an RPD acceptance criterion up to 50% of the mean concentration of the analyte. It should be noted that variations might be higher for organic analysis, due to the volatile nature of the components, and for low concentrations of analytes.

The adopted criterion will not apply to RPDs where one or both concentrations are less than 10 times the reporting limit, as this criterion would otherwise overestimate the significance of minor variations in concentrations at or near the laboratory reporting limit. Large RPDs returned for low concentrations of analytes near the reporting limit is not as indicative of a significant difference in the results as a small RPD is for larger concentrations.

This approach is employed by NATA accredited laboratories when assessing internal duplicate sample RPDs. This approach acknowledges that concentrations at or around the reporting limit are too low for an accurate evaluation of the significance of the RPD.

This approach has been adopted when assessing the relevance (compliance) of RPDs during this investigation. RPDs will be calculated for sample sets where one or both concentrations are less than 10 times the reporting limit for discussion purposes, but will not be assessed as a pass or fail in relation to the criterion.

A list of primary samples for the duplicate and triplicate soil and groundwater samples is provided in **Table G-3** with a summary of the RPD results is presented in **Appendix D**.

Table G-3 Primary, duplicate and triplicate sample summary

Parent Sample	Matrix	Duplicate ID	Triplicate ID
TP12_0.2	Soil	QA100	QA200
TP16_0.1	Soil	QA300	QA400
MW02	Water	QA100	QA200

Laboratory QC and QCI Report Summary

The laboratory selected for undertaking the analysis (Eurofins mgt) is NATA accredited for the analysis required, and undertook certain QA/QC requirements to demonstrate the suitability of the data that is obtained. The laboratory is required to undertake and report internal laboratory Quality Control (QC) procedures for all chemical analysis undertaken. The QC testing is required to include:

- Laboratory duplicate sample analysis at the rate of one duplicate analysis per ten samples;
- Method blank at the rate of one method blank analysis per 20 samples;
- Laboratory control sample at the rate of one laboratory control sample analysis per 20 samples; and
- Spike recovery analysis at the rate of one spike recovery analysis per 20 samples.

Compliance with the laboratory QA/QC requirements and non-conformance details are discussed in the internal Laboratory QA/QC reports included with the certificates of analysis in **Appendix F.**

The QA/QC Reports received from Eurofins mgt and ALS Laboratory (in **Appendix F**) highlights outliers flagged in the Quality Control Report and Holding Time breaches and breaches in the Frequency of Quality Control Samples. Review of the QA/QC documentation provided by Eurofins mgt and ALS indicates outliers existed which are summarised in **Table G-4** and **G-5.**

Table G-4 Laboratory QA/QC outlier summary – Eurofins mgt Laboratory

	QC Sample ID	Analyte	Description
Outliers: Quality Control Samples			
Method Blanks	-	-	-
Duplicates	M18-No15527	TRH C_{15}-C_{28}, TRH C_{29}-C_{36}, TRH C_{16}-C_{34}	RPD >30%, within Eurofins acceptance criteria
Laboratory Control Samples	-	-	-
Matrix Spikes	-	-	-
Regular Sample Surrogates	-	-	-
Outliers: Analysis Holding Time Compliance			
None			
Outliers: Frequency of Quality Control Samples			
None			

Table G-5 Laboratory QA/QC outlier summary – ALS Laboratory

QC Sample ID		Analyte	Description
Outliers: Quality Control Samples			
Method Blanks	-	-	-
Duplicates	-	-	-
Laboratory Control Samples	-	-	-
Matrix Spikes	-	-	-

QC Sample ID		Analyte	Description
Regular Sample Surrogates	-	-	-
Outliers: Analysis Holding Time Compliance			
N/A			
Frequency of Quality Control Samples			
N/A			

Cardno concludes that the data reported by the NATA accredited Eurofins mgt and ALS Laboratory as presented in this ESA is suitable for interpretative purposes and to make conclusions/recommendations regarding Site contamination.
