Re: Warwick Farm Mainsbridge SSP

Arborist Certification

Complete Arborcare have been commissioned to be the project arborist (upon the above mentioned site) throughout the period of the development

To ensure that trees requiring retention and protection (as stated in the Arborist Impact Assessment issued by Paul Shearer Consulting on the 30th August 2018) had been met, a site inspection was conducted on the 18/12/2019. Weather conditions were fine.

At the time of assessment it was concluded tree protection was installed in compliance with the Australian Standard (AS) 4970-2009, Protection of Trees on Development.

All native trees that were required to be retained on the site, including Tree 30, were clearly identified on the ground and protected prior to works commencing.

If for whatever reason the tree protection areas need to be entered and/or altered, it must be carried out under supervision of the project arborist.

This is not to be read or intended to be a risk assessment.

Best Regards

Colin Curtis
