

Managing construction impacts in your community

Noise, vibration and traffic

We're committed to providing the best learning environments at public schools across NSW to give young people the skills and learning they need to succeed. We're delivering a record investment in new and upgraded schools and we acknowledge this work can cause a range of impacts, such as:

noise from tools and machines

vibration from demolition, digging and drilling

dust from demolition and digging

increased traffic or changes to traffic conditions on local streets

We aim to reduce the impact of construction by:

preparing for construction before work starts

communicating with parents, carers and residents

managing the way the construction works are completed to reduce impacts if possible

Planning for construction before work starts

We prepare various plans including construction and environmental management plans. These plans outline how we will manage the construction impacts which are likely to happen on our site.

Each construction site is different and we use different construction approaches to suit each project. As a result, our plans to manage the impacts for each project vary. We also consider the students, parents, carers and residents who may be impacted by each project when developing our plans.

Our planning approach includes:

- identifying the people who may hear or feel construction noise and vibration or be impacted by the work
- adopting statutory and regulatory conditions and requirements for the project. These give us a set of rules to follow when running our site
- identifying ways to reduce the impact of noise and vibration we will make on the site
- identifying the safest routes for construction traffic to enter and exit the site
- managing safe access for our neighbours to get to and from their own properties
- making plans for parking, both on the site and near it
- setting up measures to control dust on the site.

Managing building site impacts during construction

Construction can be disruptive and we thank you for your patience while we deliver this important school project.

There are many ways we can reduce the impact of noise and vibration from construction. The measures we use are different for each project, but may include:

- positioning noisy equipment away from classrooms and homes
- maintaining equipment to keep it in good working order
- installing noise controls on very noisy equipment and tools
- timing noisy works for less sensitive periods
- timing very noisy construction outside school exam periods and other important school events
- including rest breaks from high-noise activities during construction hours

We work with contractors to manage impacts from construction:

- including conditions in our contracts they must follow
- holding site talks with construction workers to remind them of the rules for the site
- putting signage around the site to remind workers about how they can reduce noise on site

Construction work hours

Sometimes we need to work outside normal working hours. Out-of-hours work might include:

- road closures to allow oversize trucks to make large deliveries to site
- relocating pipes and cables for telephone, water, power or sewerage
- emergency works on site.

Standard construction working hours are:

- 7 am to 6 pm, Monday to Friday
- 8 am to 1 pm on Saturdays
- no work on Sundays or public holidays.

Letting you know about our construction work

During construction, we will notify parents, carers and residents before disruptive work takes place. We will tell you about:

- when we expect to start and finish the work
- the types of work we will be doing on the site
- what type of disruption to expect from the work
- a phone number to contact us with your questions or complaints about the work.

If we need to perform unexpected out-of-hours work, we will explain the reasons why as soon as possible afterwards.

You can find out more about School Infrastructure NSW projects on our website. Go to schoolinfrastructure.nsw.gov.au and enter the school name into our search bar.

For a **Translation and Interpreting Service**, call **131 450** and ask them to call the Department of Education - School Infrastructure NSW on **1300 482 651**.
