

Boolaroo Public School

Works notification | 9 February 2024

Dear staff and parents/carers,

As you may be aware, the North Lake Macquarie area is known to have experienced elevated levels of lead in the soil and dust due to the Pasminco lead smelter and the historical use of slag as landfill. This includes the suburbs of Argenton, Boolaroo and Speers Point and the three primary schools within that catchment area.

This notification is to update you on some recent enhancements to our lead management practices and activities that took place at your school over the Summer school holidays and start of Term 1 2024.

We arranged additional enhanced cleaning of internal spaces at the school focusing on areas that are difficult to keep clean regularly due to inaccessibility, such as behind bulky equipment or on very high surfaces.

In addition to this internal cleaning, we have finished some precautionary grounds maintenance work to support ground cover of the soil, following recommendations from independent environmental specialists.

This included installing mulch, turf, and garden edges to sections of the northern side of the school grounds near the Canteen (Building B). On the Southern side of the school grounds near the Library (Building D) we have also installed garden edging and mulch near the play equipment.

While the works are finished you may notice some areas with new grass remain cordoned off with temporary bunting in place to allow the grass time to establish.

Following all these precautionary measures, the environmental specialist has inspected the site and conducted monitoring and testing to confirm completed management activities have been effective.

We are planning additional sampling across the school site conducted by environmental specialists to update Lead Management Plans for each school and will continue to manage the site in accordance with these plans and the advice of experts. We will keep you updated on the timing of this work sampling work.

We will continue to work with the environmental specialists and school leadership on ongoing monitoring and management.

The health, safety, and wellbeing of the school and the local community is our highest priority.

If you have any questions about the work, please contact us on the details below.
