

Bungwahl Public School

Works notification | 3 May 2023

Dear staff and parents/carers,

Drinking water quality testing was recently conducted at Bungwahl Public School as part of planned maintenance.

Findings have detected some lead above acceptable levels, as well as some discolouration from samples collected from the staffroom sink in the library demountable building.

Testing has also detected some bacteria in samples collected from the external tap of a water tank in Block C.

Precautionary safety measures have been put in place to ensure there is no risk to students, staff or the local community. This includes restricting access to the taps and the installation of signage to warn users not to drink the water.

As there has been no material detected elsewhere, drinking water can continue to be available for use from the school's remaining usage points. This is in line with the independent occupational hygienist advice.

School Infrastructure NSW will now work with the independent occupational hygienist and the school to undertake any remediation work required. All work will be carried out by qualified contractors and School Infrastructure NSW will undertake additional testing at the school following the work to ensure the water is safe for use.

The health and safety of students and staff is the priority for the school and the NSW Department of Education. Department staff will continue working closely with NSW Health and the school leadership, to keep you updated on this matter.

If you have any questions please contact School Infrastructure NSW on 1300 482 651 or email schoolinfrastructure@det.nsw.edu.au.
