

# Gundaroo Public School

## Works notification | 26 June 2024

Dear staff, parents and carers,

Drinking water quality testing was recently conducted at Gundaroo Public School as part of our routine water testing program.

Findings have detected lead in samples collected from bubblers located at the boys' toilet in Building C. Findings have also detected copper in samples collected from the bubblers located at the girls' toilet in Building C and the drinking water tap outlet located north-east of Building B.

As a precautionary safety measure, access has been restricted to the tap and water outlets. Bottled water is being provided for students and staff.

The school's water filtration system was serviced on 20 June 2024 and the filters were replaced by qualified contractors.

As an added precaution, access to the tap outlets will remain restricted until they can be retested by an independent hygienist and a clearance certificate is provided indicating that the water can continue to be used, in line with the [national guidelines for water quality](#).

Re-testing is expected to be complete before the end of Term 2.

The health, safety and wellbeing of the school and the local community is our highest priority.

If you have any questions about this work, please contact the NSW Department of Education on the details below.

Thank you for your cooperation during this important work.
