

Yetman Public School

Works notification | 30 May 2023

Dear staff and parents/carers,

Further to our notification on 3 May regarding water quality testing results at Yetman Public School, we have been working with the independent occupational hygienist to determine the necessary remediation actions required.

We are now planning to replace all underground drinking water pipes on the school site.

The independent occupational hygienist will carry out further water quality testing once this work is completed to ensure the water is safe for use.

Precautionary safety measures such as restricting access to taps and bubblers and the installation of signage warning users not to drink the water will remain in place.

Drinking water can continue to be available for use from the school's unaffected usage points. This is in line with the independent occupational hygienist advice. Bottled water is also being supplied as an alternative for staff and students as needed.

The independent occupational hygienist will provide a clearance certification or further recommendations following the results of this second round of testing.

The health, safety and wellbeing of the school and the local community is our highest priority. Department staff will continue working closely with the school and NSW Health to keep you updated on this matter.

If you have any questions about the testing program, please contact School Infrastructure NSW on 1300 482 651 or email schoolinfrastructure@det.nsw.edu.au
