

Cringila Public School

Remediation work update | November 2023

Dear staff, parents/carers and neighbours,

As you may be aware Cringila Public School has land in the northwest region of the school grounds that is listed on the NSW Environmental Protection Authority (EPA) contaminated land register.

We have been working with the EPA and specialist agencies to develop a plan to manage this contamination.

In June 2022, a Remediation Action Plan Addendum was prepared for Cringila Public School. Part of this plan outlines a capping and on-site containment strategy involving earth/civil and fencing works.

The design and documentation stage of these works is now complete. We are moving through the procurement stage and we are expecting work to start in early to mid 2024.

We are committed to keeping you informed. Please contact School Infrastructure NSW during business hours on 1300 482 651 if you have any questions or concerns about this work.

The health, safety, and wellbeing of the school and the local community is our highest priority.

Thank you for your cooperation during this important work.
