

# Wheeler Heights Public School

## Works notification | 22 August 2025

Dear staff, parents and carers,

On Monday 18 August 2025, cement fragments, suspected to contain asbestos, were identified at Wheeler Heights Public School and tested negative for asbestos.

The fragments had been found on the lower playground of the grassed area near Building D, the classroom block closest to the sports court.

Work to clear and inspect the ground took place on the same day so the area was cleared to be used directly following an inspection by an independent hygienist.

The health, safety and wellbeing of the school and the local community is our highest priority.

Thank you for your cooperation during this important work.
