

Taree High School

Works notification | 16 June 2025

Dear staff, parents and carers,

We would like to inform you about work happening at Taree High School in response to the recent wet weather.

The school's agricultural plot was affected by contaminated flood water and for the safety of students and staff, the area has been taped off and made inaccessible.

The department will remediate the affected areas with hydrated lime.

This is the recommended way to clean soil and grass that have been contaminated by flood water, based on NSW Health guidelines.

Hydrated lime helps raise the pH level in the ground, which aims to disinfect and neutralise pathogens in the soil.

What is hydrated lime?

Hydrated lime is a powder derived from limestone that is spread over the grass and soil. It is then watered in to incorporate the lime into the grass and soil layers.

Hydrated lime is commonly found in hardware stores and comes with clear instructions for its appropriate use.

Landscaping contractors will apply the powder and water it into the grassed areas.

The areas treated with hydrated lime will stay closed to students and staff until the lime is fully absorbed into the soil.

More information

If you have any questions about this work, please contact the NSW Department of Education using the details below.

If you would like more information about health and safety during and after floods please visit the [NSW Health](https://www.nsw.gov.au/health) website.

The health, safety and wellbeing of all members of our school and the local community are our highest priorities.

Thank you for your cooperation during this important work.
