

# Castle Hill High School

## Works notification | 13 February 2025

Dear staff, parents and carers,

Following the heavy rain on 10 February, a proactive inspection was carried out yesterday at Castle Hill High School. A fragment of material suspected to contain bonded asbestos was found on a grass hill near the science classroom (demountable 14704) at the northern end of the school.

An independent hygienist was present during the inspection, removed the fragment for testing, completed a thorough visual assessment and advised that the area could continue to be used.

There is little foot traffic in this area as it is a sloped grass hill and not used as a path. The area is not listed on the school asbestos register, which will be updated if testing confirms the fragment is asbestos.

We will keep the community updated when test results become available.

All work was done in accordance with work health and safety laws and the NSW Department of Education's Asbestos Management Plan. Safety measures were in place while work was being done. All work was completed by licensed asbestos contractors and monitored by independent hygienists.

The health, safety and wellbeing of the school and the local community is our highest priority.

Thank you for your cooperation during this important work.
